This hearing report, one of a series on the reauthorization of the Higher Education Act of 1965, contains testimony concerning Titles I, VI, and XI of that Act. Title I authorizes a series of

programs designed to aid the nontraditional student. Title VI provides funds for fellowships, the establishment of national resource centers, language resource centers and business and international education programs. Title XI addresses partnerships for economic development and urban community service. This hearing consisted of two panels which included students and individuals from universities, national higher education associations, congressional representatives, and community colleges. The witnesses addressed the following issues: the needs of part-time and adult students, the internationalization of higher education, foreign language learning, study abroad, cooperative education programs, the needs of urban areas and the role that urban universities can play there, and educating the workforce. The prepared statements of the witnesses as well as supporting documents and supplemental materials are included. (JB)

The purpose of this study was to determine if an individualized reading program, Accelerated Reader combined with the core reading program, Reading Mastery would produce a greater increase in oral reading fluency and grade level performance, than relying solely on the core reading program to accomplish this. Furthermore, this study sought to determine whether students with learning disabilities who were provided reading instruction through the Reading Mastery program and the Accelerated Reader program would demonstrate comparable growth in oral reading fluency and grade level performance on selected reading assessments (DIBELS and STAR Reading). This study looked at the differences in student performance between those who had been using Accelerated Reader since August 2014 versus those who began in January 2015. In this longitudinal study, 85 first grade students in a rural, southeastern state were assessed with the DIBELS (oral reading fluency) and STAR Reading (grade level equivalency) assessment during the fall, winter, and spring screenings. Two-way repeated measures analysis of variance determined if there was a statistically significant difference between the fall and spring screenings of the STAR Reading assessment and the winter and spring screenings of the DIBELS assessment. Additionally, it determined if the oral reading fluency and grade level performance was statistically significantly different for students depending on whether they received special education services. The findings of this study revealed that when the Accelerated Reader program, is used with the Reading Mastery program, students statistically increase their oral reading fluency and grade level performance scores when instructed for 17 weeks and 34 weeks. However, the

scores of the students who received 34 weeks improved more than the scores of students who only received it for 17 weeks. Additionally, scores of the students who did not receive special education services improved more than the scores of students who received special education services. Although the students who received special education services did not make the same increase in reading fluency and grade level performance, statistically significant within-person gains were still made for this student population, which increased their reading fluency and grade level performance.

This dissertation utilized a mixed-methods, quasi-experimental design to investigate the impact of parent development on rising third graders' summer reading losses as measured by the difference in May and August oral reading fluency scores. Title I parents and students from three schools in a rural North Carolina school district participated in a parent development session that focused on reading strategies to use at home. Parents and Title I teachers were in contact during the summer via telephone or face-to-face and students kept a reading log in order to collect data regarding reading routines. Quantitative data were collected

using a pretest/posttest method using the end-of-year second-grade oral reading fluency assessment using Dynamic Indicators of Basic Early Literacy Skills (DIBELS Next). Quantitative data from reading logs and questionnaires were also used to analyze the impact of parent development and a home-based summer reading program on summer reading loss as measured by oral reading fluency (rate). Qualitative data were collected from questionnaires, parent contact logs, and reading logs. Quantitative and qualitative methods (QUAN-qual) were used to collect and analyze data in order to answer four research questions: (1) What is the impact of the parent development seminar on parents' abilities to demonstrate mastery of reading strategies? (2) What is the impact of summer reading volume (number of books initially and repeatedly read) on summer reading loss as measured by the difference in May and August oral reading fluency scores? (3): What is the impact of reading strategies (echo, NIM, shared, and repeated readings) on summer reading loss as measured by the difference in May and August oral reading fluency scores? (4) What is the impact of parent development and home-based summer reading on summer reading loss as measured by the difference in May and August oral reading fluency scores? The researcher found that parent development and home-based summer reading had a positive impact on struggling readers' (red zone) and home literacy routines. This study also found that repeated readings (within the same day) and face-to-face communication were effective strategies to target summer reading loss. Recommendations for future research include a larger sample size and a focus on the type of parent communication students receive (face-to-face or

telephone). Additional recommendations include revisions to the reading log to emphasize repeated readings and to improve self-reporting methods.

This book documents progress to date in what works in distance learning (DL). An overriding goal of this effort was to create a robust and clear set of design guidelines to support the next generation of DL training. The book is targeted mainly toward the research and program management communities. A companion book contains a set of lessons organized by guideline area. The lessons depict specific guideline areas in terms of how a particular guideline would look instantiated in a lesson.

Mastering the basic facts for addition, subtraction, multiplication, and division is an essential goal for all students. Most educators also agree that success at higher levels of math hinges on this fundamental skill. But what's the best way to get there? Are flash cards, drills, and timed tests the answer? If so, then why do students go into the upper elementary grades (and beyond) still counting on their fingers or experiencing math anxiety? What does research say about teaching basic math facts so they will stick? In *Math Fact Fluency*, experts Jennifer Bay-Williams and Gina Kling provide the answers to these questions—and so much more. This book offers everything a teacher needs to teach, assess, and communicate with parents about basic math fact instruction, including *The five fundamentals of fact fluency*, which provide a research-based framework for effective instruction in the basic facts. Strategies students can use to find facts that are

not yet committed to memory. More than 40 easy-to-make, easy-to-use games that provide engaging fact practice. More than 20 assessment tools that provide useful data on fact fluency and mastery. Suggestions and strategies for collaborating with families to help their children master the basic math facts. *Math Fact Fluency* is an indispensable guide for any educator who needs to teach basic facts. This approach to facts instruction, grounded in years of research, will transform students' learning of basic facts and help them become more confident, adept, and successful at math.

A 1939 master's thesis that has become known as the "Tudor study" prompted Dr. Goldfarb and others to revisit the ethical consideration of this study as a means of exploring ethical issues in clinical and research practices in speech-language pathology today. Over sixty years ago, under the supervision of Wendell Johnson (one of the founders of the science of speech-language pathology), graduate student Mary Tudor conducted a study to examine the effect of verbal labeling on the frequency of disfluency in both children who stuttered and children who were fluent. The subjects came from an orphanage in Davenport, Iowa. Johnson's and Tudor's findings - that they were allegedly able to induce stuttering in normally fluent children - supported their hypothesis, but have also raised serious ethical concerns. In this book, Dr. Goldfarb has gathered the leading authorities in stuttering and, together, they investigate the Tudor study and, more broadly, ethics in scientific research, diagnosis, and treatment in the field of communication sciences. Students and clinicians alike will find the accounts within this book engaging, stimulating, and ultimately relevant.

Music is one of the most universal ways of expression and communication in human life and is present in the everyday lives of people of all ages and from all cultures around the world. Music represents an enjoyable activity in and of itself, but its influence goes beyond simple amusement. Listening to music, singing, playing, composing and improvising, individually and collectively, are common activities for many people: these activities not only allow the expression of personal inner states and feelings, but

also can bring many positive effects to those who engage in them. There is an increasing wealth of literature concerning the wider benefits of musical activity, and research in the sciences associated with music suggests that there are many dimensions of human life (physical, social, psychological—including cognitive and emotional) which can be affected positively by music. The impact that musical activity has on human life can be found in different processes, including a transfer of learning from the musical to another cognitive domain. Abilities that have been developed through music education and training may also be effectively applied in other cognitive tasks. Engagement in successful music activity may also have a positive impact on social skills and social inclusion, thus supporting the participation of the individual in collective and collaborative musical events. The promotion of social participation through music can foster many kinds of inclusion, including intercultural, intergenerational, and support for those who are differently abled. The aim of this Research Topic is to present a diverse range of original articles that investigate and discuss, in different ways, the crucial role that musical activity can play in human development and well-being.

This book presents state-of-the-science research on the components of successful literacy learning and how to target them in contemporary classrooms. The volume builds on and extends the work of Steven Stahl, whose pioneering contributions encompassed the key areas of phonemic awareness, phonics, vocabulary, fluency, comprehension, and assessment. Ten classic papers by Stahl are accompanied by 16 new chapters by other leading experts, who highlight Stahl's theoretical, methodological, and instructional innovations; describe how knowledge about each domain continues to evolve; and discuss implications for helping all children become better readers.
