Offering a unique and powerful way to introduce the principles of statistical reasoning, Statistical

Reasoning in Sports features engaging examples and a student-friendly approach. Starting from the very first chapter, students are able to ask questions, collect and analyze data, and draw conclusions using randomization tests. Is it harder to shoot free throws with distractions? We explore this question by designing an experiment, collecting the data, and using a hands-on simulation to analyze results. Completely covering the Common Core Standards for

Probability and Statistics, Statistical Reasoning in Sports is an accessible and fun way to learn about statistics!

A fun historic tale by Newbery Honor-winning author, Jean Fritz! No matter how busy he was, Ben Franklin always found time to try out new ideas: a remote-control lock (so he could lock his door

without getting out of bed), a rocking chair with a fan over it (to keep flies away), and a windmill (to turn his roast meat on its spit). Aside from being a mad of ideas, he was an ambassador to England, a printer, an almanac maker, a politician, and even a vegetarian (for a time, anyway). "This biography is distinguished by its humanizing detail [and] amusing tone." - School Library Journal

Report Oswaal Books and Learning Private Limited Based in cutting-edge research in neuroscience, education, and the principles of attachment-based teaching, this important guide for parents offers tools and practices to help children transcend language-based learning difficulties, do better in school, and gain self-confidence and self-esteem. If your child has a language-based learning difficulty—such as dyscalculia, dyslexia, and

Your child may also have feelings of frustration, anger, sadness, or shame as a result of their learning differences. As a parent, it hurts to see your child struggle. But the good news is that there are proven-effective strategies you can learn to help your child be their best. This book will show you how. Helping Your Child with Language-Based Learning

Disabilities outlines an attachment-based approach to help your child succeed based in the latest research. This research indicates that a secure attachment relationship between you and your child actually optimizes their learning ability by enhancing motivation, regulating anxiety, and triggering neuroplasticity. In this book, you'll discover why it's so important to accurately assess your child, find new perspectives on LBLDs based on the most current

studies, and discover tips and strategies for navigating school, home life, and your child's future. Most importantly, you'll learn how your own special bond with your child can help spark their interest in reading, writing, and math. Every child is unique—and every child learns in his or her own way. With this groundbreaking guide, you'll be able to help your child thrive, in school and life.

Selected as the Michigan
Council of Teachers of
Mathematics winter book
club book! Rich tasks,
collaborative work,
number talks, problem-
based learning, direct
instruction...with so many
possible approaches, how
do we know which ones
work the best? In Visible
Learning for Mathematics,
six acclaimed educators
assert it's not about which
one—it's about
when—and show you how
to design high-impact
instruction so all students
demonstrate more than a

year's worth of
mathematics learning for
a year spent in school.
That's a high bar, but with
the amazing K-12
framework here, you
choose the right approach
at the right time,
depending upon where
learners are within three
phases of learning:
surface, deep, and
transfer. This results in
"visible" learning because
the effect is tangible. The
framework is forged out of
current research in
mathematics combined
with John Hattie's
synthesis of more than 15

years of education research involving 300 million students. Chapter by chapter, and equipped with video clips, planning tools, rubrics, and templates, you get the inside track on which instructional strategies to use at each phase of the learning cycle: Surface learning phase: When—through carefully constructed experiences—students explore new concepts and make connections to procedural skills and vocabulary that give shape to developing

conceptual understandings. Deep learning phase: When—through the solving of rich high-cognitive tasks and rigorous discussion—students make connections among conceptual ideas, form mathematical generalizations, and apply and practice procedural skills with fluency. Transfer phase: When students can independently think through more complex mathematics, and can plan, investigate, and

elaborate as they apply what they know to new mathematical situations. To equip students for higher-level mathematics learning, we have to be clear about where students are, where they need to go, and what it looks like when they get there. Visible Learning for Math brings about powerful, precision teaching for K-12 through intentionally designed guided, collaborative, and independent learning. *El-Hi Textbooks in Print* Penguin Getting Ready for the 4th

Children in today's world are inundated with

information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Me is that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the

school debuted a programme that taught The 7 Habits of Highly Effective People to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits,

that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.
