No issue is more fundamental in contemporary macroeconomics than the causes of the recent Great Recession. The standard view is that the banks were to blame because they took on too much risk, 'went bust' and had to be bailed out by governments. But very few banks actually had losses in excess of their capital. The counter-argument presented in this stimulating new book is

that the Great Recession was in fact caused by a collapse in the rate of change of the quantity of money. The book's argument echoes that on the causes of the Great Depression made by Friedman and Schwartz in their classic book *A Monetary History of the United States*. Oxford University Press  
 In 2006, the United Nations reported on the “feminization” of migration, noting that the number of female migrants had doubled over the last five decades. Likewise, global awareness of issues like human trafficking and the exploitation of immigrant domestic workers has increased attention to the gender makeup of migrants. But

are women really more likely to migrate today than they were in earlier times? In Gender and International Migration, sociologist and demographer Katharine Donato and historian Donna Gabaccia evaluate the historical evidence to show that women have been a significant part of migration flows for centuries. The first scholarly analysis of gender and

migration over the centuries, Gender and International Migration demonstrates that variation in the gender composition of migration reflect not only the movements of women relative to men, but larger shifts in immigration policies and gender relations in the changing global economy. While most research has focused on women migrants after 1960, Donato and Gabaccia begin their

analysis with the fifteenth century, when European colonization and the transatlantic slave trade led to large-scale forced migration, including the transport of prisoners and indentured servants to the Americas and Australia from Africa and Europe. Contrary to the popular conception that most of these migrants were male, the authors show that a significant portion were women. The

gender composition of migrants was driven by regional labor markets and local beliefs of the sending countries. For example, while coastal ports of western Africa traded mostly male slaves to Europeans, most slaves exiting east Africa for the Middle East were women due to this region's demand for female reproductive labor. Donato and Gabaccia show how the changing immigration policies of

receiving countries affect the gender composition of global migration. Nineteenth-century immigration restrictions based on race, such as the Chinese Exclusion Act in the United States, limited male labor migration. But as these policies were replaced by regulated migration based on categories such as employment and marriage, the balance of men and women receiving countries became more equal – both in large immigrant-receiving nations such as the United States, Canada, and Israel, and in nations with small immigrant populations such as South Africa, the Philippines, and Argentina. The gender composition of today’s migrants reflects a much stronger demand for female labor than in the past. The authors conclude that gender imbalance in migration is most likely to occur when coercive systems of labor recruitment exist, whether in the slave trade of the early modern era or in recent guest-worker programs. Using methods and insights from history, gender studies, demography, and other social sciences, *Gender and International Migration* shows that feminization is better characterized

as a gradual and ongoing shift toward gender balance in migrant populations worldwide. This groundbreaking demographic and historical analysis provides an important foundation for future migration research.

Asia's growth has affected the world economy. The chapter also shows that if currency trends continue, the Asian economy is expected to be larger than that of the United States and Europe combined. Some Asian countries offer sophisticated financial markets and are centers for technological innovation, while others are largely agricultural. The study shows that the region is home to 700

million poor people, about 65 percent of the world's poor—a figure that stands in stark relief against Asia's economic strength and growing prosperity. The chapter also references the inquiry by the managing editor of the *Journal of Economic Perspectives* into the rich and sometimes tortured relationship between economics and virtue. *Black Prometheus* Petrogav

International Smoking Geographies provides a research-led assessment of the impact of geographical factors on smoking. issues worldwide, and a major determinant of preventable mortality and morbidity in developed and developing countries. Gas Rigs Yale University Press Over the past five hundred years, historians and other social scientists have perceived an extraordinary occurrence: the transition from the Middle Ages, via the Renaissance, to modernity. Equally remarkable has been the transition taking place in the last fifty years from modernity to globalization, a period marked by increasing interdependen

cy and interconnectivity, as evidenced by events such as the advent of the computer. Bruce Mazlish argues that in order to understand ourselves in the world today we need to know more about the nature of both concepts. Mazlish discusses the transition in terms of "reflections." Rather than adding to the enormous amount of archival research that already exists, he instead

examines slices of modernity--the way of seeing, the sense of self, for example--as if under a microscope. He sees modernity as strongly marked by its insistence on freedom of political and religious thought and the rights of man (later expanded to include women). Such changes did not happen all at once, but as a gradual development. While some prefer to contemplate the transition

from the modern to the global as a continuous, seamless development, Mazlish argues that post-WWII developments are best understood in terms of a break or a "rupture." Illustrating that the process was further accelerated by the computer revolution and the launching of artificial satellites, Mazlish places the events of 1989 in the framework of globalization. He concludes by inquiring

further into the significance of the transition from modernity to globalization and its impact upon thought and identity. *100 technical questions and answers for job interview Offshore Oil & Gas Platforms* Routledge The job interview is probably the most important step you will take in your job search journey. Finance and Development, June 2014 Routledge The manner in which people have been talking and writing about 'development' and the rules

according to which they have done so have evolved over time. Development Discourse and Global History uses the archaeological and genealogical methods of Michel Foucault to trace the origins of development discourse back to late colonialism and notes the significant discontinuities that led to the establishment of a new discourse and its accompanying industry. This book goes on

to describe the contestations, appropriations and transformations of the concept. It shows how some of the trends in development discourse since the crisis of the 1980s – the emphasis on participation and ownership, sustainable development and free markets – are incompatible with the original rules and thus lead to serious contradictions. The Eurocentric,

authoritarian and depoliticizing elements in development discourse are uncovered, whilst still recognizing its progressive appropriations. The author concludes by analysing the old and new features of development discourse which can be found in the debate on Sustainable Development Goals and discussing the contribution of discourse analysis to development studies. This book is aimed at researchers

and students in development studies, global history and discourse analysis as well as an interdisciplinary audience from international relations, political science, sociology, geography, anthropology, language and literary studies. *100 technical questions and answers for job interview*

This book takes issue with the likening of contemporary globalization to nineteenth century trade interdependence, in which the defining feature of contemporary globalization is the spread

of global production networks, which were notably absent in the past. Maswood demonstrates that the emergence of global production networks (GPNs) was not a result of economic and trade liberalization, but instead due to neo-protectionist developments in the 1980s that acted as a catalyst to transform Japan's nationally based production networks into

the now ubiquitous GPNs. Through this case study of Japan, the author lays out a case for reconsidering the origins of globalization, and explores some of the consequences that are likely to flow from progressive evolutionary transition towards a global economy. *200 technical questions and answers for job interview* Offshore Oil & Gas Rigs IGI Global In Muhammad 'Abduh and his
