How do the most extraordinary entrepreneurs create a bold vision for the future-and follow through against all setbacks? Visionaries like Steve Jobs and Thomas Edison are the stuff of legend. Yet we still fumble in describing what they actually do. Drawing on recent insights from neuroscience about the roles that intuition, emotional intelligence, and courage can play, *Ten Steps Ahead* reveals what makes visionaries tick and how they develop and use their extraordinary powers. We learn, for instance, how Richard Branson had the insight to trademark Virgin Galactic in the early 1990s, when private spaceflight was science fiction? how Richard Feynman made breakthroughs in quantum mechanics by pretending he was an electron? why Jeff

Hawkins walked around with a block of wood and a chopstick to help design the first Palm Pilot Erik Calonius, who has interviewed many of the greatest living visionaries across disciplines and industries, weaves together their stories, highlights their shared attributes, and draws on science to help us understand what sets them apart and shows how we too can see (and make) the future. It's not that some people can magically see opportunities-it's that the rest of us are blind to the ones around us.

Healing Power: Ten Steps to Pain Management and Spiritual Evolution

The complexity and interconnection that increasingly define the life of organizations call for a much better ability to think in a systemic way. This enhanced ability connects coherently the birth of an idea (intuition) with its thorough analysis (understanding) and the operational knowledge required to carry out its implementation. All this is summarized in the Hebrew word sechel. Sechel allows us to see the relevance of, and adopt in our operations, the scientific approach that has catalyzed the last 400 years of human endeavour.

Only with an acquired sechel is it possible to manage successfully a conscious and connected organization, one that recognizes the systemic, network and project-like intrinsic nature of the work of any enterprise.

In this book, Conrad Rudolph studies and reconstructs Hugh of Saint Victor's forty-two-page written work, *The Mystic Ark*, which describes the medieval painting of the same name. In medieval written sources, works of art are not often referred to, let alone described in any detail. Almost completely ignored by art historians because of the immense difficulty of its text, Hugh of Saint Victor's *Mystic Ark* (c.1125–30) is among the most unusual sources we have for an understanding of medieval artistic culture. Depicting all time, all space, all matter, all human history and all spiritual striving, this highly polemical painting deals with a series of cultural issues crucial in the education of

society's elite during one of the great periods of intellectual change in Western history.

T. M. Rudavsky presents a new account of the development of Jewish philosophy from the tenth century to Spinoza in the

seventeenth, viewed as part of an ongoing dialogue with medieval Christian and Islamic thought. Her aim is to provide a broad historical survey of major figures and schools within the medieval Jewish tradition, focusing on the tensions between Judaism and rational thought. This is reflected in particular philosophical controversies across a wide range of issues in metaphysics, language, cosmology, and philosophical theology. The book illuminates our understanding of medieval thought by offering a much richer view of the Jewish philosophical tradition, informed by the considerable recent research that has been done in this area.
