The concept of resilience, which originally emerged in psychology, has spread to numerous disciplines and was further developed particularly in social ecology. Resilience experiences an ongoing growing reception in the humanities and historical and social sciences as well, including heterogenic approaches on how to conceptually frame resilience. Common to these approaches is, that resilience becomes topical in the context of analysing phenomena and processes of the 'resistibility' of certain (socio-historical) units or actors which are perceived as being faced with various constellations of disruptive change. In this context, resilience is not only taken to mean the opposite of vulnerability, but at the same time, resilience and vulnerability are understood as complementary concepts. From this

perspective, vulnerability is a necessary condition of resilience and vice versa. Against this background, the present volume provides a preliminary appraisal of socio-scientific and historical resilience research by assembling contributions of authors originating from different disciplines. Thus, it fosters an interdisciplinary discussion on the theoretical and analytical potentials as well as the empirical applicability of the concept of resilience. Contents Strategies, Dispositions and Resources - Theoretical contributions • Medieval case studies • Reflections and General Comments The Editors Dr. Martin Endreß is Professor for General Sociology at the University of Trier. Dr. Lukas Clemens is Professor for Medieval History at the University of Trier. Dr. Benjamin Rampp is research assistant for General Sociology at the University of Trier.

Un jour, la Seine débordera de son lit, comme elle l'a fait en 1910. Malgré les progrès des sciences et des techniques, une

telle inondation est inéluctable. Quand se produira-t-elle ? Nous l'ignorons. Nous savons en revanche qu'elle aura des retombées désastreuses, infiniment plus graves qu'il y a un siècle. Elle provoquera des dommages considérables et risquera de paralyser la vie économique de la région capitale, centre névralgique du pays. À de multiples échelles et de multiples niveaux, de l'Élysée à la RATP en passant par les sièges sociaux de La Défense, un réseau d'acteurs tente de se tenir prêt pour la « crue du siècle ». Cependant, la Ville lumière, l'Île-de-France et leurs 10 millions d'habitants sont plus vulnérables aujourd'hui qu'il y a un siècle. Pourquoi ? Que nous dit l'impréparation de la société civile sur nos aspirations à la sécurité, notre rapport à la nature ou le développement actuel des métropoles mondialisées ? Régulièrement, des catastrophes viennent nous rappeler la vulnérabilité de nos villes face à des phénomènes qui n'ont pourtant rien d'exceptionnel. À l'heure où la nécessité d'un développement plus durable semble de plus en plus largement admise, la tolérance des sociétés très modernes face à de tels événements est de plus en plus faible. À travers un décryptage limpide des conséquences prévisibles d'une inondation centennale de l'agglomération parisienne, Magali Reghezza-Zitt propose une réflexion inédite et stimulante sur la façon dont nos sociétés font ou refusent de faire face aux risques « naturels ».

This book addresses different aspects of natural hazards and vulnerabilities, with a focus on prevention and protection. It consists of nine chapters, five on flood events addressing vulnerabilities, risk assessments, impacts, sensitivity analyses, and mitigation measures, two on climate change and

reconstruction of natural hazard events such as avalanches and rockslides, and two on tsunamis and volcanoes. All chapters provide relevant information and useful elements for readers interested and concerned about the lack of action or its ineffectiveness in containing the vulnerabilities and risks of possible natural hazards worldwide.

This study examines flood risk prevention of the Seine in the Ile-de-France region. It highlights the impacts a major flood, like the one in 1910, could have on the well-being of citizens, city management and the economy.

Janvier 2011. Le technicien de permanence à la Diren (Service de la surveillance des crues) relève des résultats inquiétants sur l'ordinateur relié aux postes d'observation. On approche du troisième niveau d'alerte, celui qui exige la mise en place de

mesures spéciales. D'ailleurs, la Seine monte de façon inquiétante et le siège de la Dren elle-même, sur le quai d'Austerlitz, est menacé Une cellule de crise se réunit à Matignon, mais les experts n'arrivent pas à se mettre d'accord : faut-il évacuer d'urgence, quitte à provoquer panique et hystérie, ou attendre encore un peu, au risque que le bilan des victimes s'alourdisse ? La tension monte dans la capitale, d'autant que la secte du Temple de la Science mentale annonce le déluge et la fin du monde. Alors que le chaos menace, une jeune fonctionnaire, auteur d'un projet de plan de prévention abandonné faute de moyens, décide de prendre les choses en main. Dès lors, elle devient la cible de la secte, qui semble trouver bien des avantages à l'inondation qui gagne

This book illuminates the importance of threat on the representation of everyday life, from an interdisciplinary perspective. Divided into three parts, the book sets out by addressing the conceptual aspects of threat and by opening views on phenomena and social processes associated with threat. It shows how threat constitutes an analytical category that simultaneously involves social, psychological, religious, historical and political factors, and calls for a sufficiently broad conceptual definition to integrate pluri-disciplinary contributions. The second part focuses on the building of threats, mainly the environmental threats that have reached a tragic dimension today and are a core aspect of world concerns, the contemporary global terrorism, the migrations and the challenges these bring to contemporary societies, as well as the threats associated with the

emergence of nationalism and the diverse aspects of excluding the Other. The final part examines the coping strategies, including oblivion, denial and defiance associated with different sources of threats, for instance those arising from epidemic and collective diseases, financial technology, natural disasters and collective traumas.

Qual è stato il ruolo delle nuove radio private, locali e nazionali – comparse in modo capillare nel territorio nazionale a partire dalla metà degli anni Settanta – nella società italiana? E quale la loro importanza all'interno di un sistema dei mass media in rapida evoluzione, con la centralità della televisione? Come si è passati dal sistema monopolistico della Radio Rai alle migliaia di esperienze di radio libere, locali, private, indipendenti? Dall'esempio delle radio offshore in Nord Europa ai primi esperimenti clandestini in Italia, dalla Radio Sicilia Libera di Danilo Dolci alla legge di Riforma della Rai del 1975 e alla sentenza della Corte costituzionale del 1976, dalle radio politiche a quelle musicali, dall'impegno all'evasione, un ventennio di storia della radio è ricostruito studiandone l'impatto all'interno del sistema dei mezzi di comunicazione di massa, ed esaminando contenuti, strategie editoriali e degli ascolti, cesure e trasformazioni di un'epoca in cui il desiderio di libertà si esprimeva andando, anziché on line, in onda.
