Midwifery across the
globe faces different

issues. In some countries the autonomy of the profession is a tradition, while in some societies midwives struggle to practice autonomously the basic competencies. In one part of the world the medicalisation of

childbirth is the main issue, preventing the natural processes of pregnancy and childbirth to flow at their own pace, while in other parts of the world midwives struggle with lack of resources to provide safe midwifery care. The authors of this book practice midwifery in different cultures and within different social contexts. They have to deal with different obstacles and seek solutions to diverse problems. With their contributions, they offer an insight into their thinking, their dilemmas, and the problems of midwifery practices in their countries. However, despite different backgrounds, they all have in common a uniform goal - a wish to

offer women optimal midwifery care and to improve midwifery services.

Illness causes an existential crisis for people as it confronts them with the fragility, vulnerability and finitude of the human condition. Serious illness and hospitalisation can be challenging and life-changing experiences, especially in a context with poor resources and limited support. Healthcare workers meet patients in this space of disarray. Human qualities, such as faith, hope and compassion become crucial aspects of care. Patients' responses to these qualities

highlight the importance of spirituality as part of holistic care, not only for the patients and their families, but also for the healthcare worker. The 2nd Biennial South African Conference on Spirituality and Healthcare brought together leading experts from different disciplines, and offered a variety of perspectives to explore the ways in which spirituality interacts with healing, growth and wholeness in healthcare. This volume addresses principles and practices for spirituality and healthcare, spiritual assessment, the role of community psychology, models of spiritual care, volunteers and children's spirituality in

healthcare.

ICU Resource Allocation in the New Millennium

Pearson South Africa Development has remained elusive in Africa. Through theoretical contributions and case studies focusing on Southern Africa's former white settler states, South Africa and Zimbabwe, this volume responds to the current need to rethink (and unthink) development in the region. The authors explore how Africa can adapt Western development models suited to its political, economic, social and cultural circumstances, while rejecting development practices and discourses based on exploitative capitalist and colonial tendencies. Beyond the

legacies of colonialism, the volume also explores other factors impacting development, including regional politics, corruption, poor policies on empowerment and indigenization, and socio-economic and cultural barriers.

ARO HEALING Touching Lives THEORIES, TECHNIQUES and THERAPIES Juta and Company Ltd

A new introduction to a timeless dynamic: how the movement of humans affects health everywhere.

International migrants compose more than three percent of the world's population, and internal migrants—those migrating within countries—are more than triple that number. Population

migration has long been, and remains today, one of the central demographic shifts shaping the world around us. The world's history—and its health—is shaped and colored by stories of migration patterns, the policies and political events that drive these movements, and narratives of individual migrants. Migration and Health offers the most expansive framework to date for understanding and reckoning with human migration's implications for public health and its determinants. It interrogates this complex relationship by considering not only the welfare of migrants, but also that of the source, destination, and ensuing-generation

populations. The result is an elevated, interdisciplinary resource for understanding what is known—and the considerable territory of what is not known—at an intersection that promises to grow in importance and influence as the century unfolds.

 This title was first
 published in 2000:
 Although the apartheid
 regime has now been
 abolished there is still
 a great deal of work to
 be done in order to
 eliminate the
 disadvantages it
 created for the health
 of black people at both
 micro and macro
 levels. This book
 presents the findings of
 a study commissioned
 to assess and respond
 to the health needs of
 black people in South
 Africa. The hope
 expressed by those
 who participated is
 that the study is

considered within the wider context of understanding the apartheid system and the scars it left behind. *Community Health Needs in South Africa* represents an excellent example of how action research can be used as a tool to make a difference in people's lives.

Introduction to Health Services Management Springer Science & Business Media
The Nursing - New Perspectives book covers nursing services and related topics of interest. The book includes innovative nursing services that will positively affect patient safety such as leadership in nursing, patient-nurse conflict, patient safety and medical errors, nurses' perspective, simulation,

collaboration, communication and quality in care. Various experts from around the world have made valuable contributions to the book. I especially thank them. With these broad advanced topics covered in this particular book, no doubt the clinician, researcher, or any reader will find this book valuable in guiding them to grasp a new understanding and to keep up-to-date with information on nursing services. [Manual of Community Nursing and Communicable Diseases](#) IGI Global
This powerful volume represents the broadest engagement with disability issues in South Africa yet. Themes include theoretical approaches

to, and representations of, disability; governmental and civil society responses to disability issues; aspects of education as these pertain to the oppression/liberation of disabled people; social security for disabled people; the complex politics permeating service provision relationships; and a consideration of disability in relation to human spaces - physical, economic and philosophical. Firmly located within the social model of disability, this collection resonates powerfully with contemporary thinking and research in the disability field and sets a new benchmark for cutting-edge debates in a transforming South Africa.

Evaluating the Clinical

Learning Environment of First Year Nursing Students at a Nursing Education Institution in Gauteng Routledge

In a hospital environment the focus is on quality patient care. One of the important factors to improve the quality of patient care is the implementation of a continuous professional development programme. In a continuous professional development programme of a hospital three stakeholders namely management, clinical facilitators and the nurse practitioners are identified as partners. When the stakeholders reach a point where it is believed that the continuous professional

development programme does not serve its purpose to improve the quality of patient care it is time to evaluate and refine the programme. This study evaluate the critical care and high care units in a private hospital in Gauteng's continuous professional development programme and the conclusions and recommendations are therefore limited to this specific clinical setting. The refinements recommended cannot be utilised in other clinical setting but the evaluation and research methodology can be utilised to evaluate similar continuous professional development programmes.

Evaluation of a continuous professional development has the potential to negatively influence the nurse practitioners attitude towards continuous professional development. The objective of the research approach chosen namely a 4-D Appreciative Inquiry approach was to gain the collaboration of all the stakeholders in an effort to ensure that the evaluation of the continuous professional development programme of the critical care and high care units in the private hospital in Gauteng does not negatively affect the delivery of quality patient care. The Appreciative Inquiry research approach with

its positive approach lends it to be the most appropriate research methodology of the study. The study utilised a Focus Group Inquiry as data a collection mechanism. From the study In-service training emerged as the element that form an important element of an effective continuous professional development programme but that it is of the at most importance that an effective Workplace learning environment exists. The supportive role of Management for a continuous professional development programme also emerged as one of the main themes required for the implementation of a continuous professional

development programme. These findings were utilised in the refinement for the continuous professional development programme for the critical care and high care units in the private hospital in Gauteng. The research recommends that a steering committee be appointed to implement a pilot continuous professional development programme that incorporate the refinement elements identified. Due to the continuous improvement nature of the Appreciative Inquiry methodology it is also recommended that the pilot continuous professional development

programme been re-evaluation to ensure long-term success and improvement.

Community Health Needs in South

Africa Berghahn Books Provides final year nursing students with comprehensive guidance on how to make the leap from student to registered nurse, helping you to master the skills needed to progress from supervised to professional practice. Packed with key information, theory and advice, this book covers essential topics such as leadership and management, decision-making, professional development, assessment, law and ethics. It also provides you with an insightful overview of global nursing, exploring the issues of nurse

migration and outlining the specific requirements for registering as a nurse in countries outside of the UK. To further support your learning, the book includes engaging activities that encourage you to use critical reflection, real-life example scenarios to help improve your decision-making, and references to the author's personal experiences of professional development.

Geographies of Health and Development

Cambridge Scholars Publishing Lifestyle and Epidemiology - The Double Burden of Poverty and Cardiovascular Diseases in African Populations examines the profile of non-communicable

diseases (NCDs) in the rural South African population. The burden of diseases in South Africa is characterized by a combination of poverty-related diseases with emerging NCDs associated with urbanization, industrialization, and a Westernised lifestyle. Chapters in this book examine the effects of poverty, COVID-19, and other social factors on the prevalence of cardiovascular disease, reproductive health, and diabetes in rural South Africa.

Disability and Social Change Springer Nature

This book offers a thorough and reader-friendly discussion of the relevance of incorporating robotics into the 21st century classroom. It explores essential topics

including outcome-based education, robotics technology, the use robotics in education, and its theoretical underpinnings, among others. It also provides a wide range of examples and figures, making the book relevant across multiple disciplines in the social, educational and computer sciences. As such, it will appeal to students, teachers, researchers, and practitioners who intend to conduct robotics training in schools or institutions.

The Urban Ecologies of Divided Cities
University of Chicago Press

A lack of information is identified on the ability of professional nurses working in a neonatal intensive care unit to make competent

clinical decisions pertaining to the employment of bedside blood product filters during neonatal transfusion. In addition, a lack of complete guidelines existed to aid professional nurses in instances where they are faced with such a decision. A descriptive survey was conducted to determine and describe the knowledge professional nurses working in neonatal intensive care unit have regarding the employment of bedside blood product filters during the transfusion of a neonate with blood or blood products, as well as their ability to make competent clinical decisions in the regard. A questionnaire was designed, which was validated by experts in neonatal

intensive care nursing and blood transfusion. The questionnaires were distributed to 10 nominated public and private hospitals with neonatal intensive care units in Gauteng, South Africa, for completion. Participants were self-nominated: they participated in the study of their own free will. Neither the participants' nor the hospitals' names were revealed at any stage. Numbers were used to identify the questionnaires. 120 questionnaires were completed and were analysed using descriptive statistics. In the following step, the results obtained from the questionnaires together with literature were used to recommend guidelines for neonatal transfusion utilisation

by professional nurses working in neonatal intensive care units. The recommended guidelines were divided into two categories: General guidelines and Specific blood products guidelines. Validity and reliability was enhanced by using staff from ten neonatal intensive care units from the private and public health care sector in Gauteng, South Africa: obtaining a sufficient sample size (n=120): involvement of experts in the field of neonatal nursing science and blood transfusion, as well as a statistician from the University of Pretoria: and verification of results with literature. Ethical principles were adhered to: confidentiality was maintained as no names of any of the

hospitals or the participants were disclosed. All information regarding the study was provided to the relevant parties and the participants voluntarily signed an informed consent form. Permission to conduct the study was obtained from the selected hospitals' management. Approval to conduct the study was obtained from the Ethics Committee of the Faculty of Health Science, University of Pretoria. There were no known risks involved in the study. Recommendations were made for more research on the same topic to be conducted and their outcomes be compared to the results yielded by this study and research to be conducted to related topics. The

findings of this study were meant to improve the clinical practice of nursing in neonatal intensive care units. It was therefore recommended that these guidelines be implemented by neonatal intensive care units, training institutions and the South African Blood Transfusion Services.

AFRIKAANS : Die navorsers het 'n intensiewe oorsig van die bestaande literatuur rakende die kliniese besluitneming van professionele verpleegkundiges in neonatale intensiewe sorgeenhede gedoen. Dit het duidelik uit di?? navorsingsoorsig geblyk dat daar baie min gedoen is om die vermo??ns vas te stel van professionele verpleegkundiges wat in die neonatale

intensiewe sorgeenheid werk met betrekking tot kliniese besluitneming wat die aanwending van bloedprodukfilters tydens neonatale transfusie betref. Aanvullend het die oorsig onthul dat daar geen volledige riglyne bestaan, of voorsien word, vir professionele verpleegkundiges in gevalle waar hul met so 'n besluit gekonfronteer word. Die studie is in twee fases gedoen. In Fase een is 'n vraelys ontwerp gebaseer op konsepte en temas uit die literatuur ge??dentifiseer, waarna dit gevalideer is deur kundiges. Die vraelyste is uitgegee aan 10 genomineerde privaat- en publieke hospitale met neonatale intensiewe sorgeenhede in

Gauteng vir voltooiing. Die voltooide vraelyste is gesorteer en geanaliseer. Deelnemers is self-genomineerd: die navorser het hulle toegelaat om self te besluit of hulle wou deelneem aan die studie of nie. Deelnemers en hospitale se name is op geen stadium bekend gemaak nie. Nommers is gebruik om die vraelyste te identifiseer. In Fase twee is die uitslae van die vraelyste gebruik om riglyne te ontwerp om gebruik te word in neonatale intensiewe sorgeenhede deur professionele verpleegkundiges vir neonatale transfusie. Riglyne vir neonatale transfusie is geformuleer volgens die uitkoms van die vraelyste in

kombinasie sowel as die oorsig van die reeds bestaande literatuur deur middel van induktiewe en deduktiewe beredenering. Aangesien professionele verpleegkundiges kennis moet dra van algemene riglyne om spesifieke riglyne te kan toepas, is die riglyne in twee kategorieë verdeel: Algemene riglyne en Spesifieke bloedprodukte riglyne. Deur hierdie studie in twee verskillende omgewings, naamlik privaat- en publieke instansies te doen, en 10 eenhede van een area (Gauteng) in Suid-Afrika daarby te betrek, sowel as om 'n relatief groot steekproef te gebruik, is die oordraagbaarheid van

die uitkoms van die studie na ander streke verhoog. Die navorser het aanbeveel dat verdere studies oor dieselfde onderwerp gedoen word, en die uitkomst daarvan vergelyk word met die resultaat van hierdie studie. Die uitkoms die studie sal dan meer oordraagbaar wees na ander streke in Suid-Afrika. Die uitgebreide literatuuroorsig, die betrokkenheid van kundiges en die navorser se eie ondervinding en kennis in die neonatale intensiewe sorgverpleegkunde, het bygedra tot die vertrouenswaardigheid van die studie. Kundiges op die gebied van neonatale verpleegkunde en bloedtransfusie was betrokke, sowel as 'n biostatistikus verbonde

aan die Universiteit van Pretoria. Etiese beginsels is gevolg. Die navorser was nie bewus van, en is ook nie gekonfronteer met enige etiese dilemmas of probleme tydens die studie nie.

Konfidensialiteit is deurgaans gehandhaaf in die studie deurdat geen name van die deelnemers of hospitale genoem is nie. Alle inligting met betrekking tot die studie is aan die relevante partye verstrek en die deelnemers het almal uit eie vrye wil 'n ingeligte toestemmingsvorm onderteken.

Toestemming om die studie te doen is ook verkry van die genomineerde hospitale se bestuur. Toestemming om die studie te doen is verkry

van die Etiese Komitee van die Fakulteit van Gesondheidswetenskappe, Universiteit van Pretoria. Daar was geen risiko's betrokke aan die studie nie, slegs voordele, aangesien die doel van die studie was om die professionele verpleegkundiges in die neonatale intensiewe sorgeenhede behulpsaam te wees met besluitneming rakende die gebruik van bloedprodukfilters tydens transfusie van bloed of bloedprodukte aan 'n neonaat. Die bevindings van die studie is bedoel om die kliniese praktyk van verpleging in neonatale intensiewe sorgeenhede te verbeter. Gevolglik word 'n aanbeveling gemaak dat hierdie

riglyne gemplementeer word in neonatale intensiewe sorgeenhede, opleidingsinstansies sowel as die Suid-Afrikaanse Bloedoortappingsdiens.

African Economic Development

Routledge

This is a substantially revised edition of the 1985 Nursing: humane scientific health care of Uys and Mulder.

Fundamental Nursing

Pretoria University Law Press

State of the Nation:

South Africa 2007

offers 22 diverse

angles on

contemporary South

Africa in one

compelling and

comprehensive

collection. The politics

section focuses on the

outcome of the 2006

local government

elections and issues of

service delivery. The economy section examines the rapidly growing social welfare net, the state of our public health systems, and the topics of water and the environment, heritage and tourism. Violence against women, prison reform, the plight of South Africa's former guerrilla fighters, transformation in South African rugby and the post-apartheid role of the church all come under the spotlight in the society section. The volume concludes with a look at trends in the continuing involvement of South African business on the African continent, South Africa's part in the complex search for peace and stability in the Democratic Republic of Congo, and

the life of the vast Zimbabwean exile community in South Africa.

Debates of the National Council of Provinces (Hansard)

IGI Global

This book provides principles on content analysis and its application into development of nursing theory. It offers clear guidance to students, lecturers and researchers to gain a deeper understanding of the method of content analysis, its implementation into their own research and criteria of trustworthiness evaluation. The book is written in user-friendly language with provided research examples and cases, and the content is illustrated by figures and tables. The authors offer their expertise in

providing a well thought through explanation of content analysis in didactical style, which will enhance university education. The book includes highly experienced researchers who have published articles on content analysis and the trustworthiness of the method with more than 10 000 citations. Divided into two parts, this book explores the application of content analysis into nursing science. The first part presents the philosophical position of content analysis, inductive and deductive methods of using content analysis, trustworthiness of the method, and ethical consideration of using content analysis. The second part informs on the theory

development based on content analysis, conceptualization of the concepts of content analysis into generation of items and instrument development, and statistical testing of a hypothetical model. The last chapter shows a new approach to using content analysis in systematic reviews and quality evaluation of methodology within systematic review process. The book is an essential tool for nursing science, providing instruction on key methodological elements in order to provide rigorously conducted empirical research for clinical practice and nursing education.

Nursing Penguin
Random House South
Africa

This edition, written as

South Africa moves from expensive curative health care to a more people-focused primary health-care system, highlights transitional structures and bridges the gap between past and present. Part One focuses on the Government of National Unity and population development programmes, emphasising the role of community nurses in the primary health-care system. Subsequent sections cover factors playing an important role in community nursing, including housing, urbanisation and malnutrition. In accordance with the National Health-care Plan for South Africa, prominence is given to issues such as health

education and maternal and child health care. The section on communicable diseases has been updated and takes into account changes in legislation and the latest statistical information. Primary health-care problems at community level are covered in depth. Students and practitioners will benefit from the wealth of information in this new edition.

Choice and conscience: Lessons from South Africa for a global debate Juta and Company Ltd

The many and varied challenges facing higher education include a culture of publish or perish, increased course loads without more pay or benefits, increased

pressure on institutions to compete for students, budget cuts, a political atmosphere targeting higher education, and continued systemic inequities. Those who work in higher ed are under more stress today than ever before. It has never been more important to understand and address the emotional self at work in higher education. The *Emotional Self at Work in Higher Education* is an essential research publication that generates conversations around the practical implementation of healthy emotional workspace practices in the sphere of higher education and investigates tools, frameworks, and case studies that can create

a sustainable and healthy work environment. It moves beyond addressing emotional intelligence to addressing the awakening of a greater sense of the emotional self. Featuring a wide range of topics such as distance education, mindfulness, and artificial intelligence, this book is ideal for educators, researchers, academicians, administrators, and students.

Rethinking and Unthinking Development Women's Health Project Centre for Health Policy University of Witwatersrand
The impact of transformational leadership styles, management strategies, and communication for organizational

effectiveness and employee performance within organizations cannot be overemphasized. Leadership as a concept has evolved over the years based on situations, practices, and change management approaches in organizations. The evolution of transformational leadership in organizations is imperative to examine in order to motivate and encourage others to collectively support and work to achieve organizational effectiveness or vision and mission. Leadership needs a paradigm shift to influence opportunities and challenges in organizations such as organizational behavior, motivation,

communication, and management functions. Transformational Leadership Styles, Management Strategies, and Communication for Global Leaders aims to provide relevant theoretical, conceptual/procedural, and the latest empirical research findings frameworks that critically examine the areas of leadership, leadership styles, management studies, and communication for leaders globally. It is designed for multi-sectoral interests in business and educational organizations, chief executive officers, executive members, team leaders, industry leaders, human resource directors/personnel,

leadership and management leaders, and practitioners.
