The second half of the  
past century witnessed a  
remarkable paradigm shift  
in approach to the  
understanding of igneous  
rocks. Global literature  
records a change from a  
classical petrographic  
approach to emphasis on  
mineral chemistry, trace  
element characteristics,  
tectonic setting, phase  
relations, and theoretical  
simulation of magma  
generation and evolution  
processes. This book

contains contributions by  
international experts in  
different fields of igneous  
petrology and presents an  
overview of recent  
developments. This book  
is dedicated to the late Dr  
Mihir K. Bose, former  
professor of the  
Department of Geology,  
Presidency College,  
Calcutta, India, who  
actively participated in  
the development of this  
new global view of

This shorter version of the  
best-selling WORLDS OF  
MUSIC provides much of  
the authoritative  
coverage of the  
comprehensive version in  
a format that's accessible  
to students without any  
background or training in  
music. Using a case-study  
approach, the text  
presents in-depth  
explorations of music of  
several cultures from  
around the world. The  
authors, all

ethnomusicologists  
working in their fields of  
expertise, base their  
discussions of music-  
cultures on their own  
fieldwork, and give  
students a true sense of  
both the music and  
culture that created it.  
General editor, Jeff Todd  
Titon, has written the  
text's opening chapter  
that introduces students  
to ethnomusicology and  
relates each chapter's  
music heard on the  
accompanying CDs to the  
fundamentals of music in  
a worldwide context. The  
text concludes with a  
chapter that invites  
students to participate by  
undertaking a fieldwork  
research project that  
increases a student's  
understanding of music in  
daily life. The  
supplementary three-CD  
set works hand in hand  
with the authors' prose,  
providing students with  
access to a wide range of  
music-cultures and  
include authentic  
recordings from the

authors' fieldwork. Leading off is the long-standing jewel in the WORLDS OF MUSIC crown -- James Koetting's magnificent recording of postal workers canceling stamps at the University of Ghana post office. A Western-sounding hymn tune performed against African rhythms, this piece, more than any other, lets the student hear contrasting music-cultures. Rosa Liksom's karhean kaunis novellikokoelma vuodelta 1886. Unohdetun vartin novelleissa liikutaan pohjoisen Suomen harvaan asutuilla seuduilla ja nähdään elämää, laidasta laitaan. Liksom's persoonallinen tyylilaji on tuttu: havainnollinen, melankolinen, terävä ja sarkastinen – ja ennen kaikkea ihmistä ymmärtävä. Liksomille myönnettiin novelleistaan Kalevi Jäntin palkinto ja Valtion kirjallisuuspalkinto

vuonna 1987. Rosa Liksom (s. 1958) on monipuolinen kirjailija, joka loi ensimmäisillä novellikokoelmillaan lyhytproosan käsitteen. Hän on kirjoittanut myös romaaneja, joista Hytti nro 6 (2011) voitti kirjallisuuden Finlandia-palkinnon. Liksom's tuotantoon kuuluu lisäksi sarjakuvia, elokuvia, näytelmiä ja lastenkirjoja. Hänen teoksiaan on käännetty kymmenille kielille.

This book presents a synchronic grammar of the southern dialects of Yauyos, an extremely endangered Quechuan language spoken in the Peruvian Andes. As the language is highly synthetic, the grammar focuses principally on morphology; a longer section is dedicated to the language's unusual evidential system. The grammar's 1400 examples are drawn from a 24-hour corpus of transcribed recordings collected in the course of the documentation of the language.

The protein molecule is the basic building block of every living entity. Its deficiency leads to restricted growth and development of individuals. Globally, such malnutrition is on the rise due to various reasons such as rapid population growth, stagnation of

productivity, and ever-rising costs. Millions of people, especially in developing and underdeveloped countries, suffer from protein malnutrition and the only possible solution is to encourage farmers to grow high-protein food legume crops in their fields for domestic consumption. This, however, could be possible if farmers are provided with new cultivars with high yield, and resistance to major insects, diseases, and key abiotic stresses. The major food legume crops are chickpea, cowpea, common bean, groundnut, lentil, pigeonpea, and soybean. Predominantly, the legume crops are grown under a subsistence level and, therefore, in comparison to cereals and horticultural crops their productivity is low and highly variable. The crop breeders around the globe are engaged in breeding suitable cultivars for harsh and changing environments but success has been limited and not up to needs. With the recent development of new technologies in plant sciences, efforts are being made to help underprivileged farmers through breeding new

cultivars which will produce more protein per unit of land area. In this book, the contributors analyze the constraints, review new technologies, and propose a future course of crop breeding programs in seven cold and warm season legume crops.

Plant phenotyping is the thorough assessment of plant traits such as growth, development, adaptation, yield, quality, tolerance, resistance, architecture, and the basic measurement of individual quantitative parameters that form the basis for understanding of traits. Genetic approaches to understand plant growth and development have always benefitted from phenotyping techniques that are simple, rapid and measurable in units. The forward genetics approach is all about understanding the trait inheritance using the phenotypic data and in most cases it is the mutant phenotypes that formed the basis for understanding of gene functions. With rapid advancement of genotyping techniques, high throughput genotyping has become a

reality at costs people never imagined to be that low, but the phenotypic methods did not receive same attention. However, without quality phenotyping data the genotyping data cannot be effectively put to use in plant improvement. Therefore efforts are underway to develop high-throughput phenotyping methods in plants to keep pace with revolutionary advancement in genotyping techniques to enhance the efficiency of crop improvement programs. Keeping this in mind, we described in this book the best phenomic tools available for trait improvement in some of the world's most important crop plants.

Understanding Ethiopia is a detailed description of Ethiopia's geological story and enables non-specialist readers to share the author's thrill at gaining a deeper insight into the processes which produced, and continue to shape, this amazing country. Ethiopia's spectacular landscapes, ranging from mountains over 4500m high to salt plains 150m below sea level, are a reflection of the geological processes that formed the country. Indeed, its history and the historical sites, for which it is renowned, are largely determined by geology. Readers learn why and how Ethiopia's geology is both unique and dynamic, as here the earth's crust is in the process of breaking apart.

In this travelogue/cookbook, the James Beard Award-winning author of Yucatán takes you on a tour of Mexico's most colorful destinations—its markets. David Sterling's passion for Mexican food has attracted followers from around the globe. Just as Yucatán earned him praise for his "meticulously researched knowledge" (Saveur) and for producing "a labor of love that well documents place, people and, yes, food" (Booklist), Mercados now invites readers to learn about local ingredients, meet vendors and cooks, and taste dishes that reflect Mexico's distinctive regional cuisine. Serving up more than one hundred recipes, Mercados presents unique versions of Oaxaca's legendary moles and Michoacan's carnitas, as well as little-known specialties such as the charcuterie of Chiapas, the wild anise of

Pátzcuaro, and the seafood soups of Veracruz. Sumptuous color photographs transport us to the enormous forty-acre, 10,000-merchant Central de Abastos in Oaxaca as well as tiny tianguises in Tabasco. Blending immersive research and passionate appreciation, David Sterling's final opus is at once a must-have cookbook and a literary feast for the gastronome. "The 560 thick, glossy pages of [Mercados] are such a riot of color and photography, the first time I picked up the book, I didn't pause to read a word of it. It took a second pass through David Sterling's gorgeous travelogue to absorb that it is equally rich in information—not so much a cookbook as a treatise on the food and culture of Mexico as told through its vibrant markets." –Dallas Morning News "Reflects a lifetime of traveling to markets throughout Mexico to document the diverse foodways of the country." –Austin360

With the publication of this book, the definitive work on the diplomatic history of Ethiopia in the last quarter of the nineteenth century could be said to have seen the light of day. The book deals with a crucial period when the destiny of Ethiopia hang in the balance. The question - as indeed it was the case for the rest of Africa - was whether the country was to remain independent or become colonized.

Menilek, combining diplomatic and military

initiatives, not only ensured that Ethiopia remained independent but also expanded its territory to unprecedented limits. The book is based on a critical reading of the secondary literature as well as an exhaustive and analytical use of all the pertinent archival sources, the memoirs and biographies of the principal European characters, and Ethiopian chronicles, biographies and other primary sources. It can serve as the standard text for teaching courses on Ethiopia and the Horn at the university level. At the same time, it provides a useful background to those interested in the formation of the modern Ethiopian state as well as its troubled relations with what eventually became Eritrea.

In the context of climate change, pollution and food safety, the current challenge is to enhance legumes production to sustain the growing population needs by 2050. This is a daunting task because abiotic and biotic stresses are

threatening the growth, survival and productivity of legumes. For instance, the productivity of legumes is documented to be reduced by 14-88% by abiotic stresses. The co-occurrence of abiotic and biotic stresses under field conditions leads to interactive stress types, thus yielding positive or negative outcomes. Legumes react using antioxidant defense, osmoregulatory adjustments, hormonal regulations and molecular mechanisms to tolerate stress. Hence, improving legume productivity requires knowledge on the sensitivity, mechanisms and approaches of stress tolerance in legumes, in order to design new crops and alternative management systems. This book presents advances on bioactive compounds, applications, effect of various stresses and biotechnology-based stress tolerance mechanisms of legumes. This is our second volume on Legume Agriculture and Biotechnology, published in the series Sustainable Agriculture Reviews.
