Interventional cardiology refers to catheter-based treatment of cardiovascular diseases. This dynamic new field is one of the fastest growing fields in medicine. In the United States, more than a million percutaneous coronary interventions (PCI) are performed annually; moreover, the number of procedures performed will likely continue to increase. The field of interventional cardiology has evolved dramatically over the past decade with the availability of embolic protection devices, drug eluting stents, mechanical thrombectomy catheters, etc. Interventional cardiology represents a rapidly moving target for the cardiologist who seeks to integrate recent advances into their clinical practice. The advent of newer technology presents both an opportunity as well as numerous challenges for the cardiologist to treat patients optimally. *Interventional Cardiology: Essential Clinicians Guide* (Oxford American Cardiology Library) aims to provide clinicians with concise, easily accessible guidance on the pre-procedural, procedural and post procedural aspects of PCI in general situations and in various specific clinical settings. The volume features evidence-based discussion on patient selection, vascular access, general principles of PCI, and various specific settings and optimal post procedure management of these patients. This handbook focuses on tailoring stent type to the individual patient, taking into account specific risk factors and comorbidities, appropriate use of embolic protection and thrombectomy catheters. Highly practical in format, content and style, *Interventional Cardiology: Essential Clinician's Guide* serves as a succinct, yet comprehensive, easily accessible point-of-care reference for busy practitioners. Useful tools, such as treatment algorithms, charts, tables and illustrations assist in making this volume a practical reference tool.

Hypertension remains the leading cause of cardiovascular morbidity and mortality in spite of current medical therapies. It has been estimated that 50% of Western civilization has hypertension and approximately 20% of patients have resistant hypertension. Renal denervation (RDN) is a minimally invasive, endovascular catheter based procedure using radiofrequency ablation aimed at treating resistant hypertension. Early studies show a high degree of effectiveness in renal denervation to treat hypertension. This book examines renal pathophysiology and the rationale for renal denervation, as well as possible long term benefits and risks of this new therapy. The myriad of devices involved in the evolution of this therapy are discussed and the book concludes with analyses of the cost effectiveness and future applications.

In November 1986, I was invited to attend a symposium held in Barcelona on Diseases of the Pericardium. The course was directed by Dr. J. Soler-Soler, director of Cardiology at Hospital General Vall d'Hebron in Barcelona. During my brief but delightful visit to this institution, my appreciation of the depth and breadth of study into pericardial diseases, carried out by Dr. Soler and his group, grew into the conviction that these clinical investigators have accumulated a wealth of information concerning pericardial diseases, and that investigators and clinicians practicing in English speaking countries would greatly profit from ready access to the results of the clinical investigations into pericardial disease carried out in Barcelona. The proceedings of the Barcelona conference were published in a beautifully executed volume in the Spanish language edited by Dr. Soler and produced by Ediciones Doyma. Because I believe that this work should be brought to the attention of the English speaking scientific and clinical communities, I encouraged Dr. Soler to have the book translated into English. I knew that this task could be accomplished and that the book would be translated into good English without change of its content. My confidence was based upon a translation of my own book, *The Pericardium*, into Spanish undertaken by Dr. Permanyer, who is a contributor and co-editor of the present volume.
