Written by an author team of accomplished leaders in statistics education, *The Basic Practice of Statistics (BPS)* reflects the actual practice of statistics, where data analysis and design of data production join with probability-based inference to form a coherent science of data. The authors' ultimate goal is to equip students to carry out common statistical procedures and to follow statistical reasoning in their fields of study and in their future employment. The text's long-standing renown is built on an inspired framework of balanced content, experience with data, and the importance of ideas. These themes are widely accepted by statisticians concerned about teaching and are directly connected to and reflected by the themes of the College Report of the Guidelines in Assessment and Instruction for Statistics Education (GAISE) Project. The eighth edition of *The Basic Practice of Statistics* is supported in SaplingPLUS for a user experience of its own. SaplingPLUS combines Macmillan's StatsTools, powerful multimedia resources, and text-specific exercises with the powerful targeted feedback of Sapling Learning, where every problem is a teaching and learning opportunity.

Is it time to refresh the way you think about teaching Earth science? *Learning to Read the Earth and Sky* is the multifaceted

resource you need to bring authentic science—and enthusiasm—into your classroom. It offers inspiration for reaching beyond prepared curricula, engaging in discovery along with your students, and using your lessons to support the Next Generation Science Standards (NGSS). The book provides • examples of Earth science labs and activities you and your students can do as co-investigators; • insights into student expectations and misconceptions, plus ideas for inspiring true investigation; • stories of real scientific discovery translated for classroom consideration; • exploration of how you can mentor students as a teacher-scholar; and • guidance on how to translate the sweeping core ideas of the NGSS into specific examples students can touch, see, and experience. The authors of *Learning to Read the Earth and Sky* are husband-and-wife educators who promote science as something to figure out, not just something to know. They write, "It is our hope that readers will find our book short on 'edu-speak,' long on the joy of doing science, and full of stories of students, classrooms, scientists, and Earth and sky."

Offering a unique and powerful way to introduce the principles of statistical reasoning, *Statistical Reasoning in Sports* features engaging examples and a student-friendly approach. Starting from the very first chapter, students are able to ask questions, collect and analyze data, and draw conclusions using randomization tests. Is it harder to shoot free throws with distractions? We explore this question by designing an experiment, collecting the data, and using a hands-on simulation to analyze results. Completely covering the Common Core Standards for Probability and Statistics, *Statistical Reasoning in Sports* is an accessible and fun way to learn about statistics!

"Atoms First seems to be the flavor of the year in chemistry textbooks, but many of them seem to be little more than rearrangement of the chapters. It takes a master like McQuarrie to go back to the drawing board and create a logical development from smallest to largest that makes sense to students."---Hal Harris, University of Missouri-St. Louis

"McQuarrie's book is extremely well written, the order of topics is logical, and it does a great job with both introductory material and more advanced concepts. Students of all skill levels will be able to learn from this book."---Mark Kearley, Florida State University This new fourth edition of *General Chemistry* takes an atoms-first approach from beginning to end. In the tradition of McQuarrie's many previous works, it promises to be another ground-breaking text. This superb new book combines the clear writing and wonderful problems that have made McQuarrie famous among chemistry professors and students worldwide. Presented in an elegant design with all-new illustrations, it is available in a soft-cover edition to offer professors a fresh choice at an outstanding value. Student supplements include an online series of descriptive chemistry Interchapters, a Student Solutions Manual, and an optional state-of-the-art Online Homework program. For adopting professors, an Instructor's Manual and a CD of the art are

also available.

The Most Dangerous Game Univ Science Books

From one of America's most popular short story writers and an Academy Award nominee: the O. Henry Award-winning tale that inspired the movie *The Hunt*. A subject of mysterious rumors and superstition, the deserted Caribbean Island was shrouded in an air of peril. To Sanger Rainsford, who fell off a yacht and washed up on its shores, the abandoned isle was a welcome paradise. But unknown to the big-game hunter, a predator lurked

in its lush jungles—one more dangerous than any he had ever encountered: a human. First published in 1924, this suspenseful tale “has inspired serial killers, films and stirred controversy in schools. A century on, the story continues to thrill” (The Telegraph). “[A] tense, relentless story of man-against-man adventure, in which the hunter Sanger Rainsford learns, at the hands of General Zaroff, what it means to be hunted.”

Adapted by Paul Krugman and Robin Wells from their bestselling principles of economics textbook, *Economics in Modules* is the only text for the principles course organized in the supremely accessible, highly effective modular format. Instead of chapters of standard length, the book covers the fundamentals of economics in 84 brief (4-10 page) modules divided into 26 sections. *Economics in Modules* offers the best of what makes Krugman/Wells a classroom favorite (story-telling approach, engaging writing, fascinating examples and cases), in a format students and instructors will love. Extensive educational research shows that students absorb more from shorter reading assignments than longer ones. And with coverage in self-contained modules, instructors can assign specific

topics without asking students to read entire chapters.
