Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health

condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Production and manufacturing management since the 1980s has absorbed in rapid succession several new production management concepts: manufacturing strategy, focused factory, just-in-time manufacturing, concurrent engineering, total quality management, supply chain management, flexible manufacturing systems, lean production, mass customization, and more. With the increasing globalization of manufacturing, the field will continue to expand. This encyclopedia's audience includes anyone concerned with manufacturing techniques, methods, and manufacturing decisions.

This open access book explores the concept of Industry 4.0, which presents a considerable challenge for the production and service sectors. While digitization initiatives are usually integrated into the central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0. Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics solutions and managerial models specifically for SMEs. Aiming to provide methodological

frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management, digitization and small business, as well as practitioners within manufacturing companies.

This is a 6" by 9" restored and re-formatted edition of Alan Calvert's original 1924 classic: SUPER STRENGTH. The text remains exactly as written in the original 1924 edition. This book is considered by many strength historians to be "The Bible" of modern muscle building and weight training. The great John C. Grimek kept only one book on his book shelf by his desk at York Barbell and it was his copy of SUPER STRENGTH. This book is truly one of the most influential in the history of the Iron Game and Physical Culture. Alan Calvert was one of the most important and most under-rated figures in the history of physical culture. He was the founder and publisher of STRENGTH MAGAZINE and the founder of MILO BARBELL COMPANY in the early 1900's. MILO was the first mass produced plate loaded modern barbell. STRENGTH magazine was an early leader

in physical culture and many famous legends of the Iron Game such as Mark Berry, John C. Grimek, and many others, got their start there. This book has 26 chapters and 298 pages. There are many pages with old photographs and illustrations. This is a must have book for your physical culture library. Visit our website and see our many books at PhysicalCultureBooks.com

Joining Textiles Simon and Schuster

Understanding the techniques for joining fabrics together in a way that considers durability, strength, leak-tightness, comfort in wear and the aesthetics of the joints is critical to the production of successful, structurally secure fabric products. *Joining textiles: Principles and applications* is an authoritative guide to the key theories and methods used to join fabrics efficiently. Part one provides a clear overview of sewing technology. The mechanics of stitching, sewing and problems related to sewn textiles are discussed, along with mechanisms of sewing machines and intelligent sewing

systems. Part two goes on to explore adhesive bonding of textiles, including principles, methods and applications, along with a review of bonding requirements in coating and laminating of textiles. Welding technologies are the focus of part three. Heat sealing, ultrasonic and dielectric textile welding are covered, as are laser seaming of fabrics and the properties and performance of welded or bonded seams. Finally, part four reviews applications of joining textiles such as seams in non-iron shirts and car seat coverings, joining of wearable electronic components and technical textiles, and the joining techniques involved in industrial and medical products including nonwoven materials. With its distinguished editors and international team of expert contributors, *Joining textiles* is an important reference work for textile product manufacturers, designers and technologists, fibre scientists, textile engineers and academics working in this area. Provides an authoritative guide to the key theories and methods used to efficiently join fabrics Discusses the mechanics of stitching and sewing and

problems related to sewn textiles, alongside mechanisms of sewing machines, and intelligent sewing systems. Explores adhesive bonding of textiles, including principles, methods and applications, along with a review of bonding requirements in coating and laminating of textiles.

 Based on 30 years of experience as a

surgeon working in the field of pediatric colorectal and pelvic reconstructive surgery, author Marc Levitt shares the tips and tricks that he has developed to make operations and patient management easier and reproducible. This book teaches these skills to achieve positive results. Patients with anorectal malformations (ARMs), Hirschsprung disease (HD), fecal incontinence from a variety of conditions, colonic motility disorders, and a myriad of other conditions comprise the field of pediatric colorectal and pelvic reconstruction. Such patients require care throughout their lives from specialists across numerous fields, which may include colorectal surgery, urology, gynecology, and GI motility, as well as specialized nursing, orthopedics, neurosurgery, anesthesia, pathology, radiology, psychology, social work, and nutrition. Sometimes the field can seem chaotic and unpredictable. Reconstruction requires creativity and at times it feels that artwork is being created during the actual operation with no pre-plan in mind. Marc Levitt and his colleagues have worked very hard to counter that feeling, to be fully prepared, and to develop protocols,

techniques, and processes that can be adopted by other clinicians, so that optimal results for patients can be achieved. This book reflects both this experience and this approach.

Organizational culture has been a topic of interest to researchers, and there has been specific interest in the link between culture and organizational performance. However, the relationship between organizational culture and business excellence and how to achieve outstanding performance is still ambiguous. Organizational Culture and Achieving Business Excellence: Emerging Research and Opportunities is an essential research reference that examines the association between organizational culture type and business excellence and the moderating effect of ICT use. Highlighting topics such as data analysis, culture types, and productivity, this book is ideal for business professionals, managers, private organizations, government agencies, researchers, and academicians.
