There's something in  
the earth deep below  
Elise Kavanagh's  
territory. A shadow is

falling upon local  
demons to devour their  
flesh and harvest their  
souls. And it's coming  
for Elise next. The  
Union has an easy way  
out. They want to send  
Elise into hiding again  
with her former  
partner, James  
Faulkner. All she has to  
do is surrender the  
territory and trust that  
they can protect the  
ethereal ruins, the dark  
gate, and the city she's  
come to know as  
home. Greater powers  
have other plans for  
Elise and her fabled  
power as  
Godslayer-plans that  
mean surrendering her  
life and blood to the  
most powerful demon  
alive. But if she  
descends, there's no  
turning back. Once she  
gazes into the abyss, it  
will gaze back into  
her...and Elise will be  
damned forever.

Molecular Associations in Biology provides information pertinent to molecular biology. This book discusses

several topics, including DNA replication, calculation of intermolecular energies, and thermodynamic parameters of polynucleotides. Organized into 35 chapters, this book starts with an overview of the specific association of the purine and pyrimidine bases in the nucleic acids, which provides the basis for storage, expression, and transmission of genetic information. This text then explores the secondary structures, interactions, and replication processes of nucleic acids. Other chapters consider the complex biological process of protein synthesis. This book discusses as well the methods of photodynamic action,

which is significant in detecting energy transfer from dye to the biomolecule and identifying the free radicals produced. The final chapter deals with the macroscopic properties of molecular systems, which refer to such concepts as volume, mass, pressure, temperature, and pH. This book is a valuable resource for biophysicists, organic chemists, biochemists, and biologists.

Clinical Skills for

Healthcare Assistants is an accessible, easy to read guide, outlining the fundamental and core skills integral to clinical practice. Divided into three sections, the first looks at fundamental skills applicable to all staff, such as accountability, communication and record keeping. Section two explores core clinical skills for example respiratory care, pulse, blood glucose management, catheter care, and fluid balance. Section three outlines complex clinical skills that require more in-depth training and may be restricted to specialist areas of practice, such as medication, and intravenous cannulation. Each chapter follows the same easy to use structure, starting with

the aims and objectives of the chapter, followed by the explanation of why the skill is performed, relevant anatomy and physiology, related aspects and terminology, how to perform the skill and common problems. Aimed primarily at healthcare assistants, this will also be a useful resource for newly qualified practitioners and students in health and social care.
