Dive Log Book

iUniverse
Paperback edition.
Over the course of two years, author James Rosemond, with the aid of a newfound dive buddy named Scotty, explores Carteret County, the bottom of

the ocean, and himself. This book is a humorous recounting of their misadventures above and below the surface, diving and hunting for flounder, while mildly stretching the recreational dive rules. Transitioning through a self-imposed "mid life" crisis by "Hiding on the Bottom," the author realizes that life is more than work, adventure being just beyond the door step. Scotty, with his bizarre wisdom, helps him understand what is important, finding life's little pleasures and adventures along the way, always recognizing the humor in every situation. After reading the preview, which is the first part of Chapter One, if you want to read more before ordering the

book, click on the James Rosemond link at the top of the page and then download the entire content of Chapter One for free.

[Bends Explained](#) Jeff Bauer

This text blends theoretical and scientific aspects with practical and directly applicable diving physiology and medical information. It is divided into three sections - the underwater environment, physiological responses to the underwater environment, and medical problems associated with the sport.

From one of the
world's most renowned
cave divers, a firsthand
account of exploring
the earth's final
frontier: the hidden
depths of our oceans
and the sunken caves

inside our planet More
people have died
exploring underwater
caves than climbing
Mount Everest, and we
know more about deep
space than we do
about the depths of our
oceans. From one of
the top cave divers
working today—and
one of the very few
women in her
field—Into the Planet
blends science,
adventure, and memoir
to bring readers face-
to-face with the terror
and beauty of earth's
remaining unknowns
and the extremes of
human capability. Jill
Heinerth—the first
person in history to
dive deep into an
Antarctic iceberg and
leader of a team that
discovered the ancient
watery remains of
Mayan
civilizations—has
descended farther into

the inner depths of our planet than any other woman. She takes us into the harrowing split-second decisions that determine whether a diver makes it back to safety, the prejudices that prevent women from pursuing careers underwater, and her endeavor to recover a fallen friend's body from the confines of a cave. But there's beauty beyond the danger of diving, and while Heinerth swims beneath our feet in the lifeblood of our planet, she works with biologists discovering new species, physicists tracking climate change, and hydrogeologists examining our finite freshwater reserves. Written with hair-raising intensity, *Into the Planet* is the first book to deliver an

intimate account of cave diving, transporting readers deep into inner space, where fear must be reconciled and a mission's success balances between knowing one's limits and pushing the envelope of human endurance.

The Oregon Coast is well known for its beauty. The rugged coastline with its constant wave and surf action provides the calming sounds of the ocean that all can hear, but a diver also sees the giant kelp forests and gets excited about the promise of abundant marine life, brilliantly colored anemone, sponges, cute little reef fish and huge ling cod, large

plate-sized rock scallops, abalone, giant Pacific octopus, and friendly wolf eel. This is truly a diver's paradise. There are no stories of skin divers prior to World War II, but with the development of rubber dry suits and neoprene wetsuits in the early 1950s, divers began to explore the reefs out past the surf and in protected coves near the shoreline. Images of Modern America: Diving off the Oregon Coast showcases the images of a few diving pioneers, early and current dive stores, the beautiful coastline, and the colorful world underwater.

NAUI Scuba Diver Instructor Guide
Arcadia Publishing
Details about many of the divers that I evaluated are included

with comments on the way their dives got them into trouble and the chamber at City Island, NAHC. I discuss their treatment profiles and the results of their treatment. It presents a larger series of bent divers than any I am aware of. Should you find another comparable series contact me at avoidaccidents@ymail.com. Ideas about bends have changed from the concept that a bubble formed in the nervous system because of a rapid ascent or the joint by cavitation-negative pressure. Rapid ascent or joint motion caused the culprit to appear and pressure would make the bubble go away. Now we are focused on treating tissue damage with oxygen. But, we are

still using pressure and oxygen to increase the partial pressure of oxygen in the affected tissue. The treatment of choice is the 5 hour long U.S. Navy Treatment Table 6 which washes out the nitrogen in the tissue and washes in the oxygen. Careful understanding of how my patients got bent and how they responded should make any diver more cautious regarding repetitive diving and a multi-day series of dives. Pressure at the deepest part of the dive washes in the nitrogen over time. Fatty tissue, that includes the central nervous system and peripheral nerves, absorbs more nitrogen than watery tissues such as muscle. Shaping-up to dive

includes weight loss, abstinence during the duration of the series of dives, and improving lung function. Physical conditioning prevents tachycardia, a rapid heart beat, during exertion. A program of regular exercise two or three times a week prevents early fatigue during prolonged exertion, or increases stamina. Exercise such as walking 20 or more minutes a day for several weeks before diving is as important as paying for the trip. Swimming accustoms one to buoyancy, relaxing in the water, and adjusting temperature regulating reflexes such as vasoconstriction in the skin on immersion. Dive accidents sometimes do not have a treatable solution. Most "accidents" resolve

after one re-compression breathing oxygen under pressure. Many patients were treated multiple times, and some did not get complete relief of their symptoms and/or neurological findings. Immediate therapy traditionally is in-water re-compression which has its drawbacks. It is difficult to administer and hypothermia, fatigue, and drowning are risks. Surface-On-Deck oxygen breathing from a face-mask or immediate re-compression in a chamber are always effective treatments. Transport to a facility has logistical problems and the destination chamber may not be functional when it is needed. The U.S. Navy Diving Manual Rev.6 Vol. 5 20-4.4.2.1 has

procedures for In-Water Re-compression using AIR, 20-4.4.2.2 In-Water Re-compression Using Oxygen. Both sections advise going to 30 fsw and additional instructions for decompressing. If oxygen is used and the decompression has been completed then 3 hours of oxygen breathing is the procedure. One cylinder of oxygen and a face mask are good for one diver for 3 hours. Where are the other cylinders for other divers? The book is about the chamber that I personally operated and staffed. I was almost continually available. The number of bent divers that I treated, not all are included in the book because they were routine, speaks for

itself. AAA, Avoid An Accident-Plan Safe Dives.

Sport Scuba Diving in Depth

Sandsmedia via PublishDrive
One diver, after a seemingly brief period below the surface, discovers that his gas supply has run perilously low. Another, paralyzed, bobs helplessly on the surface, and when a poorly trained divemaster attempts rescue, things go from bad to worse. Two other divers, fascinated by the bountiful undersea life of the Caribbean, fail to notice that a powerful current is sweeping them rapidly away from their unattended boat. These are just a few of the true stories you'll find in *Diver Down*, most of them involving diver error

and resulting in serious injury or death. Each of these tales is accompanied by an in-depth analysis of what went wrong and how you can recognize, avoid, and respond to similar underwater calamities. This unique survival guide explores the gamut of diving situations, including cave and wreck diving, deep-water dives, river and drift diving, decompression sickness, and much more. It shows you how to prevent tragic mishaps through: Inspection and maintenance of primary and secondary diving gear Learning and following established safety protocols Confirming the training and credentials of diving professionals Practicing emergency responses
