This volume presents the proceedings of the 18th International Probabilistic Workshop (IPW), which was held in Guimarães, Portugal in May 2021. Probabilistic methods are currently of crucial importance for research and developments in the field of engineering, which face challenges presented by new materials and technologies and rapidly changing societal needs and values. Contemporary needs related to, for example, performance-based design, service-life design, life-cycle analysis, product optimization, assessment of existing structures and structural robustness give rise to new developments as well as accurate and practically applicable probabilistic and statistical engineering methods to support these

developments. These proceedings are a valuable resource for anyone interested in contemporary developments in the field of probabilistic engineering applications.

An Introduction to Geotechnical Processes

Thomas Telford

Broadening the recommendations published by Jardine and Chow in 1996, this volume provides procedures that can be applied by geotechnical engineers, supported by worked examples for sands and clays. It also offers guidance on application to a range of pile types, geotechnical profiles and loading conditions.

CIRIA and member firms of the Federation of Piling Specialists (FPS) collaborated in instituting this research, in order to: - obtain and analyse new CFA pile test results in chalk, - re-examine the pile test data available at the time PR11 was written, - review whether the published value of b is conservative, - explore the factors that affect it, - refine design recommendations. This book makes recommendations for the design of shaft resistance of CFA piles in low- and medium- density chalk. It is not appropriate to the design of piles constructed by any other method. The report contains the graphical plots and analyses of pile test data and reviews some design aspects of continuous flight augered piles in chalk. Contents: 1 Introduction, 2 Analysis of results, 3 Identification of chalk with a low unit shaft resistance, 4 Pile testing and factors of

safety, 5 Conclusions and recommendations, References, Appendix 1 Examination of exposed shaft of CFA piles, Appendix 2 Site investigation methods appropriate for CFA piling in chalk, Appendix 3 CFA piles in chalk pile load test information check list.

Whilst accounting for the present-day popularity and relevance of Alan Watts' contributions to psychology, religion, arts, and humanities, this interdisciplinary collection grapples with the ongoing criticisms which surround Watts' life and work. Offering rich examination of as yet underexplored aspects of Watts' influence in 1960s counterculture, this volume offers unique application of Watts' thinking to contemporary issues and critically engages with controversies surrounding the commodification of Watts' ideas, his alleged misreading of Biblical texts, and his apparent distortion of Asian religions and spirituality. Featuring a broad range of international contributors and bringing Watts' ideas squarely into the contemporary context, the text provides a comprehensive, yet nuanced exploration of Watts' thinking on psychotherapy, Buddhism, language, music, and sexuality.

This text will benefit researchers, doctoral students, and academics in the fields of psychotherapy, phenomenology, and the philosophy of psychology more broadly. Those interested in Jungian psychotherapy, spirituality, and the self and social identity will also enjoy this volume.

This book gathers the best peer-reviewed papers presented at the Italian Concrete Days national conference, held in Rome, Italy, on October 27-28, 2016. The conference topics encompass the aspects of design, execution, rehabilitation and control of concrete structures, with particular reference to theory and modeling, applications and realizations, materials and investigations, technology and construction techniques. The contributions amply demonstrate that today's structural concrete applications concern not only new constructions, but more and more rehabilitation, conservation, strengthening and seismic

upgrading of existing premises, and that requirements cover new aspects within the frame of sustainability, including environmental friendliness, durability, adaptability and reuse of works and / or materials. As such the book represents an invaluable, up-to-the-minute tool, providing an essential overview of structural concrete, as well as all new materials with cementitious matrices. An often-quoted Swedish saying goes as follows: "A child has three teachers: the first teacher is the other children, the second teacher is the teacher, and the third teacher is the room." Students learn best where learning is interesting and fun - so the standards required for school construction are equally high. The continual development of educational concepts and new didactic approaches are changing everyday life in schools and, with it, the functional and aesthetic qualities of this building task. Classrooms and public areas both inside and outside are becoming increasingly flexible and multifunctional. They offer opportunities to retreat for individualized learning

opportunities and zones of concentrated work, as well as open space landscapes for inter-year mingling and self-organized group activities. The school projects presented in this volume show how contemporary pedagogical concepts are translated into compelling and very diverse architectural solutions.

The essential guide to the theory and application of the Social Change Model Leadership for a Better World provides an approachable introduction to the Social Change Model of Leadership Development (SCM), giving students a real-world context through which to explore the seven C's of leadership for social change as well as a approaches to socially responsible leadership. From individual, group, and community values through the mechanisms of societal change itself, this book provides fundamental coverage of this increasingly vital topic. Action items, reflection, and discussion questions throughout encourage students to think about how these concepts apply in their own lives. The Facilitator's Guide includes a wealth of activities, assignments,

discussions, and supplementary resources to enrich the learning experience whether in class or in the co-curriculum. This new second edition includes student self-assessment rubrics for each element of the model and new discussion on the critical roles of leadership self-efficacy, social perspective, and social justice perspectives. Content is enriched with research on how this approach to leadership is developed, and two new chapters situate the model in a broader understanding of leadership and in applications of the model. The Social Change Model is the most widely-used leadership model for college students, and has shaped college leadership curricula at

schools throughout the U.S. and other countries including a translation in Chinese and Japanese. This book provides a comprehensive exploration of the model, with a practical, relevant approach to real-world issues. Explore the many facets of social change and leadership Navigate group dynamics surrounding controversy, collaboration, and purpose Discover the meaning of citizenship and your commitment to the greater good Become an agent of change through one of the many routes to a common goal The SCM is backed by 15 years of research, and continues to be informed by ongoing investigation into the interventions and environments that create positive

leadership development outcomes. Leadership for a Better World provides a thorough, well-rounded tour of the Social Change Model, with guidance on application to real-world issues. Please note that The Social Change Model: Facilitating Leadership Development (978-1-119-24243-7) is intended to be used as a Facilitator's Guide to Leadership for a Better World, 2nd Edition in seminars, workshops, and college classrooms. You'll find that, while each book can be used on its own, the content in both is also designed for use together.
