Learning to work with light is an important milestone in every photographer's career, and the ability to craft light to fit your vision for an image is a skill that cannot be overrated. Most often, that crafting of light is spoken of in terms of the *quality* and *quantity* of light. But there is an important, third component of light that heavily influences the final look of the image: the *color* of light. In *Chroma: A Photographer's Guide to Lighting with Color*, photographer Nick Fancher helps you elevate your game when it comes to introducing the bold, creative, and intentional use of color into your work.

Whether you're using a high-powered strobe or a small hotshoe flash, *Chroma* is for you. Nick begins with a discussion of color theory, gels, and white balance, then examines how to determine which colors complement your subject matter (whether that's people or products). He moves on to cover topics such as:

- Balancing, mixing, and overpowering ambient light with artificial light
- Layering colors for unique color combinations
- Mixing hard and soft light to achieve extremely rich color
- Lighting detail and texture
- Modifier options, such as ring flash, snoots, barn doors, softboxes, and filters
- Gobos to control the light
- Post-processing for vibrant, powerful colors
- How (and why) to light with color, even when the end goal is a black and white image

Illustrated throughout with innovative and expressive imagery, *Chroma* also includes behind-the-scenes photos, lighting diagrams, and Lightroom settings so you can follow along from the initial concept through to the final edit.

Natural light portraiture is hugely popular. The light source is free, malleable, and available anywhere. Mastering its use requires a specific skill set, however. Fortunately, Tony Corbell is up to the task of showing readers how to harness its full power. He sets a foundation for mastering this powerful source, beginning with a discussion on how to set camera controls to ensure the right amount of light is allowed to strike the image sensor to create the portrait and how to read a histogram to ensure that a subject-appropriate (versus so-called "correct") exposure results. Next, he moves on to discuss light quantity and quality and how each can be modified and manipulated to produce dimensional, lifelike portraits. Readers will learn

techniques for using hard/soft light, working with window light, ensuring a proper white balance (so that colors in the scene are true-to-life in the final image), and adding or subtracting light to achieve the desired effect. Corbell's images and instructions show readers how to produce the flattering, highly salable portraits they're after—indoors and out.

This lighting manual shows that successful studio photography does not require a warehouse-sized space brimming with expensive lights, Hollywood-style facades, and a half-dozen assistants making the client lattes. Rather, this guide shows photographers how to create studio lighting effects that range from clean and classic to highly complex and use a garage, spare bedroom, or even a backyard as their "studio." The simple setups show that one to three small, inexpensive electronic flash units—along with budget-friendly stands, communication systems, and some do-it-yourself light modifiers—can be combined to create brilliant studio-quality images without the studio. Numerous sample shoots and plans provide clear instructions for taking control of any environment to create spectacular images.

He also teaches you when and how adding fabric or props will further your image, and when less is more. Also included are pages on traditional compositional guidelines such as effective framing, leading lines, and the Rule of Thirds. Finally, Trampe ends with a look at basic retouching in postproduction to lighten or darken the image, remove blemishes, and creatively crop the image for added impact. Without light, there is no photograph. As almost every

photographer knows, the word “photograph” has its roots in two Greek words that, together, mean “drawing with light.” But what is less commonly acknowledged and understood is the role that shadow plays in creating striking, expressive imagery, especially in portraiture. It is through deft, nuanced use of both light and shadow that you can move beyond shooting simply ordinary, competent headshots into the realm of creating dramatic portraiture that can so powerfully convey a subject’s inner essence, communicate a personal narrative, and express your photographic vision.

In *The Dramatic Portrait: The Art of Crafting Light and Shadow*, Chris Knight addresses portraiture with a unique approach to both light and shadow that allows you to improve and elevate your own portraiture. He begins with the history of portraiture, from the early work of Egyptians and Greeks to the sublime treatment of light and subject by artists such as Caravaggio, Rembrandt, and Vermeer. Chris then dives into a deep, hands-on exploration of light, shadow, and portraiture, offering numerous lessons and takeaways. He covers:

- The qualities of light: hard, soft, and the spectrum in between
- The relationships between light, subject, and background, and how to control them
- Lighting patterns such as Paramount, Rembrandt, loop, and split
- Lighting ratios and how they affect contrast in your image
- Equipment: from big and small modifiers to grids, snoots, barn doors, flags, and gels
- Multiple setups for portrait shoots, including those that utilize one, two, and three lights
- How color contributes to drama and mood, eliciting an emotional response from the viewer
- How to approach styling your portrait, from wardrobe to background
- The post-processing workflow, including developing the RAW file, maximizing contrast, color grading, retouching, and dodging and burning for heightened drama and effect

ABCs of Beautiful Light New Riders

Nylora Bruleigh’s presentation of Fine Art Portrait Photography perfectly depicts her creativity and ingenuity. Photographers by their very nature are creative, but Nylora takes it more than a step beyond the norm. Her patience and diligence in creating images such as “Awaiting True Love’s Kiss” with Snow White and the Seven Dwarfs, “Elegant Egrets”, “Waiting in Suspense”, “Queen of Hearts”, “Black and White” and “Who’s the Fairest of Them All?” are just a few examples of her creativity and perseverance. Not only does she show her before and after images for all of the photographs in this book, she also gives a thorough explanation as to how she took the thought process through from the initial idea to fruition. She tells how, before coming up with a theme for a portrait session, she will scour yard sales or visit antique shops to find just the right prop for a future session. The wheels of her mind are in constant motion, sometimes even awakening her in the middle of the night, giving her new concepts with which to experiment.
