Drawing on healing systems from around the world, a medical anthropologist and herbalist offers natural and holistic remedies for treating Lyme disease When Dr. Wolfe Storl was diagnosed with lyme disease, he refused standard treatments because of antibiotic intolerance. Instead, he researched healing systems of various cultures—including Traditional Chinese Medicine, American Indian healing practices, homeopathy, and traditional Western herbal lore—and discovered the teasel root. Teasel, a flowering plant that grows throughout Europe and Asia, tonifies the liver and kidneys, promotes blood circulation, and strengthens the bones and tendons. The plant has been documented to help cure chronic conditions marked by arthritis, sore, stiff muscles, and eventual incapacitation—all symptoms associated with Lyme disease. Dr. Storl's approach consists of flushing out toxins and inhibiting bacteria by using teasel root as tincture, powder, or tea (available for purchase online and in natural foods stores); stimulating the immune system and detoxifying the body by exposing it to extreme heat (sweat lodges and Japanese baths); and dietary and naturopathic measures, including fresh natural food, exercise, and sufficient sleep. Written in an encouraging, personal tone but based in science and clinical studies, *Healing Lyme Disease Naturally* offers hope in combating a condition that has stubbornly resisted conventional medical treatment.

Suddenly, research findings require a paradigm shift in our view of the microbial world. The Human Microbiome Project at the National Institutes of Health is well under way, and unprecedented scientific technology now allows the censusing of trillions of microbes inside and on our bodies as well as in the places where we live, work, and play. This intriguing, up-to-the-minute book for scientists and nonscientists alike explains what researchers are discovering about the microbe world and what the implications are for modern science and medicine. Rob DeSalle and Susan Perkins illuminate the long, intertwined evolution of humans and microbes. They discuss how novel DNA sequencing has shed entirely new light on the complexity of microbe-human interactions, and they examine the potential benefits to human health: amazing possibilities for pinpoint treatment of infections and other illnesses without upsetting the vital balance of an individual microbiome. This book has been inspired by an exhibition, *The Secret World Inside You: The Microbiome*, at the American Museum of Natural History, which will open in New York in early November 2015 and run until August 2016. It will then travel to other museums in the United States and abroad.

Urinary tract infections (UTIs) are among the most common bacterial infections in humans. Their frequency varies with age, gender and socioeconomic background. Authored by scientists especially selected for their expertise in the field, this book reviews the latest research data and presents current concepts of the pathogenesis, prevention and treatment of UTIs. Modern methods of diagnosis and new antibacterial agents are evaluated, and recommendations for the choice of antimicrobial and the duration of treatment in different conditions are provided. Besides acute cystitis and pyelonephritis, special attention is given to complicated UTIs, such as infections in renal transplant patients, patients infected with HIV or patients on anticancer drugs and glucocorticosteroid therapy. Finally, areas are identified in which well-designed clinical studies and more basic research could lead to cost-effective improvements in the management of UTIs. This book represents the latest international consensus on treatment and etiology of UTIs. As such, it will assist clinicians and health care professionals in curing their patients and should also be appreciated by basic and clinical researchers in urology, nephrology, microbiology and diabetes.  This could be the most important book you will read this year. Around the office at Chelsea Green it is referred to as the "pharmaceutical Silent Spring." Well-known author, teacher, lecturer, and herbalist Stephen Harrod Buhner has produced a book that is certain to generate controversy. It consists of three parts: A critique of technological medicine, and especially the dangers to the environment posed by pharmaceuticals and other synthetic substances that people use in connection with health care and personal body care. A new look at Gaia Theory, including an explanation that plants are the original chemistries of Gaia and those phytochemistries are the fundamental communications network for the Earth's ecosystems. Extensive documentation of how plants communicate their healing qualities to humans and other animals. Western culture has obliterated most people's capacity to perceive these messages, but this book also contains valuable information on how we can restore our faculties of perception. The book will affect readers on rational and emotional planes. It is grounded in both a New Age spiritual sensibility and hard science. While some of the author's claims may strike traditional thinkers as outlandish, Buhner presents his arguments with such authority and documentation that the scientific underpinnings, however unconventional, are completely credible. The overall impact is a powerful, eye-opening expos' of the threat that our allopathic Western medical system, in combination with our

unquestioning faith in science and technology, poses to the primary life-support systems of the planet. At a time when we are preoccupied with the terrorist attacks and the possibility of biological warfare, perhaps it is time to listen to the planet. This book is essential reading for anyone concerned about the state of the environment, the state of health care, and our cultural sanity.
