The ball handler who fakes and then drives past a defender for an easy score. A pass rusher who leaves a would-be blocker in his wake on the way to sacking the quarterback. A setter who manages to maneuver both body and ball in the blink of an eye to make the perfect pass for the kill and match-winning point. These are all reasons agility and quickness are such prized physical attributes in modern sport. Efforts to become markedly quicker or more agile, however, aren't always successful. Genetic limitations, technical deficiencies, and inferior training activities are among the major obstacles. *Developing Agility and Quickness* helps athletes blow past those barriers thanks to the top sport

conditioning authority in the world, the National Strength and Conditioning Association. NSCA hand-picked its top experts to present the best training advice, drills, and programs for optimizing athletes' linear and lateral movements. Make Developing Agility and Quickness a key part of your conditioning program, and get a step ahead of the competition.

These are my personal lecture notes for the Spring 2011, University of Toronto, Relativistic Electrodynamics course (PHY450H1S). This class was taught by Prof. Erich Poppitz, with Simon Freedman handling tutorials (which were excellent lecture style lessons). Official course description: Special Relativity, four-vector calculus and relativistic notation, the relativistic Maxwell's Equations, electromagnetic waves in vacuum and conducting and non-conducting materials, electromagnetic radiation from point charges and systems of charges. This document contains a few things * My lecture notes. Typos and errors are probably mine (Peeter), and no claim nor attempt of spelling or grammar correctness will be made. These notes track along with the Professor's hand written notes very closely, since his lectures follow his notes very closely. While I used the note taking exercise as a way to verify that I understood all the materials of the day, Professor Poppitz's notes are in many instances a much better study resource, since there are details in his notes that were left for us to read, and not necessarily covered in the lectures. On the

other hand, there are details in these notes that I have added when I did not find his approach simplistic enough for me to grasp, or I failed to follow the details in class. * Some notes from reading of the text. * Some assigned problems.
