Les contributions regroupées dans cet ouvrage visent à comprendre les relations et influences à travers le temps entre l'Europe et les États-Unis. S'il existe des différences importantes entre le modèle de société américain et européen, si à certains moments de notre histoire, même récente, des divergences sont apparues, il est essentiel de rappeler les multiples convergences entre

ces deux continents. Le couple euro-américain n'est pas un mythe et les évolutions géopolitique et géoéconomique futures ne devraient que l'inciter à approfondir et à intensifier les relations transatlantiques. Outre l'importance de l'objet d'étude traité, cet ouvrage produit une analyse pluridisciplinaire essentielle à la compréhension du sujet et s'appuie sur des auteurs ayant un regard multiculturel. The contributions gathered in this volume seek to understand the relations and influences across time between Europe and the United States. If there are significant differences between the model of American

and European society, if at some point in our history, even recent, some divergences emerged, it is important to remember the numerous similarities between these two continents. Euro-American couple is not a myth and the future geopolitical and geo-economic developments should encourage them to deepen and strengthen transatlantic relations. Besides the importance of the treated study topic, this work supplies a multidisciplinary analysis, essential to the understanding of the subject and is based on authors having a multicultural view.

This volume represents the beginning of a

'cross pollination' of different social scientific disciplines, bridging the boundaries between national and disciplinary epistemic communities in the worlds of European welfare markets. It maps the common ground and uncovers new research directions for the future study of actors, policies and institutions shaping the growth and dynamics of European welfare markets. The book defines welfare markets as politically shaped, regulated and state supported markets that provide social goods and services through the competitive activities of non-state actors. The chapters focus on what happens after states have initiated

welfare markets, with equal weight given to the analysis of the agency of state actors and non-state actors in the contraction, stabilisation, and disruption of welfare markets. By focusing the analysis on two cases of welfare markets, private pensions and home-based domestic/care work, the contributions explore and compare the dynamics of different types of markets. The research will be of use to sociologists and scholars of social policy interested in the social dimension of welfare markets, political scientists and political economists, as well as diverse epistemic communities across the social sciences.  General synthesis essay trying to consider, as an example, the causes of the notoriety of Johann Sebastian Bach, particularly in comparison with his contemporary Vivaldi. Is the notoriety of the great composers due to the real musical interest of their masterpieces for the people or to the result of a complex alchemy in which ideology mainly intervenes? The name of Bach seems particularly to illustrate the influence of extra-musical factors in the recognition of genius,

real or supposed. The comparison with his contemporary Vivaldi allow to show the importance of such factors.

The eighteenth century has often been viewed as a period of relative decline in the field of microscopy, as interest in microscopes seemed to wane after an intense period of discovery in the seventeenth century. As such, developments in the field during the Enlightenment have been largely overlooked. This book therefore fills a considerable gap in the study of this life science, providing a thorough analysis of what the main concerns of the field were and how microscopists learned

to communicate with each other in relevant ways in order to compare results and build a new discipline. Employing a substantial body of contemporary literature from across Europe, Marc J. Ratcliff is able to present us with a definitive account of the state of research into microscopy of the period. He brings to light the little known work of Louis Joblot, re-evaluates the achievements of Abraham Trembley and gives new weight to Otto-Friedrich Müller's important contributions. The book also connects changes in instrument design to an innovative account of microscopical research during the eighteenth century and the rich social

networks of communication that grew during this period. Investigating the history of microscopical research from 1680 up to 1800 also shows how scholars progressively established a modern rule on which to shape their new discipline: balancing microscopical magnification with shared vision. This rule developed in response to the diminishing size of the microscopical object during the course of the eighteenth century, from dry minute organisms such as insects, to aquatic minute bodies such as polyps, and finally to aquatic invisible organisms, thus completing the scholar's quest to study the invisible. This

book will be essential reading for historians of microscopy, epistemologists, and for historians of the life sciences in the modern period.

The concept of resilience currently infuses policy debates and public discourse, and is promoted as a normative concept in climate policy making by governments, non-governmental organizations, and think-tanks. This book critically discusses climate-resilient development in the context of current deficiencies of multilateral climate management strategies and processes. It analyses innovative climate

policy options at national, (inter-)regional, and local levels from a mainly Southern perspective, thus contributing to the topical debate on alternative climate governance and resilient development models. Case studies from Africa, Asia, and Latin America give a ground-level view of how ideas from resilience could be used to inform and guide more radical development and particularly how these ideas might help to rethink the notion of 'progress' in the light of environmental, social, economic, and cultural changes at multiple scales, from local to global. It integrates theory and practice with the aim of providing practical solutions to improve,

complement, or, where necessary, reasonably bypass the UNFCCC process through a bottom-up approach which can effectively tap unused climate-resilient development potentials at the local, national, and regional levels. This innovative book gives students and researchers in environmental and development studies as well as policy makers and practitioners a valuable analysis of climate change mitigation and adaptation options in the absence of effective multilateral provisions.

 The only thoroughly documented Amazons in world history are the women warriors of Dahomey, an eighteenth- and nineteenth-century Western African kingdom. Once dubbed a 'small black Sparta,' residents of Dahomey shared with the Spartans an intense militarism and sense of collectivism. Updated with a new preface by the author, *Amazons of Black Sparta* is the product of meticulous archival research and Alpern's gift for narrative. It will stand as the most comprehensive and accessible account of the woman warriors of

Dahomey.
