Muscles and Bones (A Repulsive Augmented Reality Experience) Zenith Press
This essential companion

book to the bestselling Classic Human Anatomy provides artists and art students with a deeper understanding of human anatomy and different types of motion, inspiring more realistic and energetic figurative art. Fine-art instruction books do not usually focus on anatomy as it relates to movement, despite its great artistic significance. Written by a long-time expert on drawing and painting

human anatomy, Classic Human Anatomy in Motion offers artists everything they need to realistically draw the human figure as it is affected by movement. Written in a friendly style, the book is illustrated with hundreds of life drawing studies (both quick poses and long studies), along with charts and diagrams showing the various anatomical and structural components. This

comprehensive manual features 5 distinct sections, each focusing on a different aspect of the human figure: bones and joint movement, muscle groups, surface form and soft tissue characteristics, structure, and movement. Each chapter builds an artistic understanding of how motion transforms the human figure and can create a sense of expressive vibrancy in one's art.

The cutaway illustrations in this book allow our eyes to see what usually remains hidden. They

open up houses, bodies, and objects, and allow the individual parts to comprehensively explain the whole.
Looking at the outside of things such as architecture, anatomy, or vehicles does not usually reveal much about their internal structures and functions. To learn more, we need to see inside them. Look Inside features infographics that cut up or take apart their subjects

and make them transparent. The resulting cross sections and interior views present precise detail in multiple layers. Look Inside starts with a discussion of Arnhem Land, the earliest known cutaway illustrations, showing that even 28,000 years ago, humans had a fascination with how things internally work: the processes that are hidden from the human eye. Including work

from both centuries past and the cutting-edge present, Look Inside is an unparalleled compendium of cutaway techniques and their wide-ranging applications. Works from Jewish-German physician Fritz Kahn's imagine the human body as a mechanized factory; Kahn's visual metaphors show conveyor belts and offices instead of veins and valves. Exploded

images of classic sports cars allows Fabian Oefner to show every piece of the automotive puzzle from the body shell to individual tiny screws. Richard Orr's scientific pieces represent the natural world and continue in the genre's traditional thread of handmade illustrations; whether a beaver lodge or an arctic circle landscape, Orr presents a vivid natural world or layers and scientific hierarchies.

The luxurious collection within Look Inside was curated by renowned information designers and creative directors, Samuel and Juan Velasco. The Velasco brothers have provided invaluable and inspirational insight in the history and theory of cutaway illustrations and visual storytelling. volume examines the different methods artists and anatomists used to reveal the inner workings of the human body and evoke wonder in its form. For centuries, anatomy was a fundamental component of artistic training, as artists such as Leonardo da Vinci and Michelangelo sought to skillfully portray the human form. In Europe, illustrations that captured the complex structure of

the body—spectacularly realized by anatomists, artists, and printmakers in early atlases such as Andreas Vesalius’s *De humani corporis fabrica libri septem* of 1543—found an audience with both medical practitioners and artists. *Flesh and Bones* examines the inventive ways anatomy has been presented from the sixteenth through the twenty-first century,

including an animated corpse displaying its own body for study, anatomized antique sculpture, spectacular life-size prints, delicate paper flaps, and 3-D stereoscopic photographs. Drawn primarily from the vast holdings of the Getty Research Institute, the over 150 striking images, which range in media from woodcut to neon, reveal the uncanny beauty of the human body

under the skin. *Professor Astro Cat’s Human Body Odyssey* CarTech Inc White Space Is Not Your Enemy is a practical graphic design and layout guide that introduces concepts and practices necessary for producing effective visual communication across a variety of formats—from web to print.
