How can a promise be a lie? Answer: when the promisor never intended to perform the promise. Such incidences of promissory fraud are frequently litigated because they can result in punitive damages awards. And an insincere promisor can even be held criminally liable. Yet courts have provided little guidance about what the scope of liability should be or what proof should be required. This book—the first ever devoted to the analysis of promissory fraud—answers these questions. Filled with examples of insincere promising from the case law as well as from literature and popular culture, the book is an indispensable guide for those who practice or teach contract law. The authors explore what promises say from the perspectives of philosophy, economics, and the law. They identify four chief mistakes that courts make in promissory fraud cases. And they offer a theory for how courts and practitioners should handle promissory fraud cases.

Existing research on resume fraud highlights the commonality and consequences of resume misrepresentations, yet almost no research exists aiming to explain the occurrence of this intentional behaviour. The goal of this study was to explore the relationships between personality traits previously linked to deception (conscientiousness and honesty/humility), resume misrepresentations and acceptance of these misrepresentations. An online survey method of data collection was used during which participants constructed a resume and filled out various measures pertaining to individual difference and resume misrepresentation. The results of this study provide an initial understanding of the existing categories of resume misrepresentations and the extent to which participants misrepresent. Findings indicate interconnected relationships between acceptability of resume misrepresentations, actual resume misrepresentations, conscientiousness and honesty/humility. Potential implications of findings and study limitations are discussed.

The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support "or distort" practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report Responsible Science: Ensuring the Integrity of the Research Process evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about

research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. Responsible Science served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. Fostering Integrity in Research identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.
