Light And Optics Test Review Light or visible light is electromagnetic radiation within the portion of the electromagnetic spectrum that can be perceived by the human eye. Visible light is usually defined as having wavelengths in the range of 400–700 nm, between the infrared (with longer wavelengths) and the ultraviolet (with shorter wavelengths). This wavelength means a frequency range of roughly 430–750 terahertz (THz). Light - Wikipedia Score: 88.9 • Price: \$1,000
Upshot: Excellent optics in a reasonably priced Leica With its Trinovid HD, Leica has joined fellow European brands in producing a mid-priced optic that maintains the high quality of the company but is accessible to most American hunters. In this way, Leica is following the lead of Zeiss and Swarovski, whose Conquest and CL Companion lines, respectively, feature ...The
