Applied Channel Theory in Chinese Medicine demonstrates how a deeper understanding of the interrelationship between organ and channel theory can lead to more precise diagnoses and better clinical results. This book is a collaboration between Wang Ju-Yi, one of modern China's most respected scholars, teachers, and practitioners of traditional Chinese medicine, and his American apprentice and practitioner, Jason

Robertson. While most textbooks focus either on the functions of the organs in basic physiology or on the uses of the channels in treatment, this book shows the essential relationships between the two. Theory and practice are connected through a detailed discussion of a channel palpation methodology developed by Dr. Wang, which leads to more precise and effective point selection, location, and technique. Applied Channel Theory in Chinese Medicine was developed during Mr. Robertson's apprenticeship with Dr. Wang in Beijing, and is presented in a unique and highly readable format that preserves the intimacy of dialogue between apprentice and teacher, with questions

and answers, narratives, and case studies.

Is moxibustion too difficult to apply, too risky or too smoky? Discover the effective new moxa method from Japan that

gets rapid results - safely. Moxibustion is ancient. Even more ancient than needling. In modern acupuncture, however, it is often considered too time-consuming or difficult to master. And yet the classics say: for chronic conditions, moxa has no equal. Coming to the rescue of time-poor, present-day acupuncturists is the Ontake Method from Japan. This innovative technique uses a piece of bamboo filled with burning moxa wool to roll, tap and press on the acupuncture meridians using a metronome programmed to each meridian's frequency. The rhythmic application of heat, frequency and pressure triggers rapid shifts in your patients' body condition and mood but this method generates only a little smoke. In this book, you will learn: Dr Manaka's meridian frequencies and how to apply them Branch treatments for symptom relief Root treatments for whole-body regulation The integration of Dr Tan's holographic models with Ontake for the rapid relief of pain in the neck, back and joints Moxa in Motion presents a step-by-step guide to clinical practice utilising the

Ontake Method. Easily integrated into any style of acupuncture, Shiatsu or Tuina, the Ontake Method will boost your results and build your practice. Oran Kivity is a veteran acupuncturist from the UK, living in Asia. He has dedicated countless hours of clinical observation and study to integrate the knowledge of contemporary Japanese masters. Through writing and teaching, he has ignited interest in Ontake, a remarkable new moxa tool from Japan, developing these dynamic new techniques further and compiling them into this practical handbook of moxibustion.

I-Ching (), a.k.a. The Book of Change, a Chinese literary classic, is one of the oldest books known as talking magically about fortune from drawing lines so called Yang and Yin. A great number of books about I-Ching have been published in many languages, mostly in Chinese, and significantly in English, and always

confined by the original I-Ching's literal interpretation treated this book more like a rare relic than a scientific treatise and wrapped with immense archaeological studies on both detailed historic chronicles and meticulous original textual understanding. As result, foremost logic elegance of I-Ching is hardly touched and never explored. This book, for the first time, will introduce you from a brand new angle by revealing I-Ching as a beautiful mathematical model followed by simple and elegant logic deductions, like a book showing the secrets of magic tricks performed by magicians.

When a child has a health problem, parents want answers. But when a child has cerebral palsy, the answers don't come quickly. A diagnosis of this complex group of chronic conditions affecting movement and coordination is difficult to

make and is typically delayed until the child is eighteen months old. Although the condition may be mild or severe, even general predictions about long-term prognosis seldom come before the child's second birthday. Written by a team of experts associated with the Cerebral Palsy Program at the Alfred I. duPont Hospital for Children, this authoritative resource provides parents and families with vital information that can help them cope with uncertainty. Thoroughly updated and revised to incorporate the latest medical advances, the second edition is a comprehensive guide to cerebral palsy. The book is organized into three parts. In the first, the authors describe specific patterns of involvement (hemiplegia, diplegia, quadriplegia), explain the medical and psychosocial implications of these conditions, and tell parents how to be effective advocates for their child. In the second part, the authors provide a wealth of practical advice about caregiving from nutrition to mobility. Part three features an extensive alphabetically arranged encyclopedia

that defines and describes medical terms and diagnoses, medical and surgical procedures, and orthopedic and other assistive devices. Also included are lists of resources and recommended reading. [Lacrimal Gland, Tear Film, and Dry Eye Syndromes 3](#)

Acupuncture has been practiced for more than 2500 years in the Western Pacific region and has become a global therapeutic method in recent decades. However, it was reported that acupuncturists differed by up to 25% in the acupuncture points they used, raising doubts and uncertainty regarding the efficacy and safety of acupuncture treatment, as well as causing difficulties in the fields of acupuncture research and

education. Member States therefore increasingly began to demand standardization in acupuncture point locations. Responding to this request, the WHO Western Pacific Regional Office initiated a project to reach consensus on acupuncture point locations and thus convened 11 serial meetings resulting in these guidelines. This Standard acupuncture point locations in the Western Pacific Region stipulates the methodology for locating acupuncture points on the surface of the human body, as well as the locations of 361 acupuncture points. The Standard is applicable for teaching, research, clinical service, publication, and academic exchanges involving acupuncture.
