LEBLANC KIRBY

Handbook of Latin American Environmental Aesthetics Bloomsbury Publishing
Brillante refutación política y científica de las tesis colapsistas, que impiden al ecologismo protagonizar la transformación que el mundo necesita. La ecoansiedad domina nuestra época. Cada nuevo informe sobre el cambio climático refuerza un terror que nos paraliza, pero este fatalismo apocalíptico no se corresponde con los mejores análisis de nuestra situación. Es también un síntoma de un ecologismo desorientado. Durante el siglo XXI podemos detener el cambio climático, reintegrarnos dentro de los límites de nuestro planeta y asegurar una vida digna para el conjunto de la humanidad. Aún está a nuestro alcance una transición ecológica que sea justa, y que no solo preserve los logros emancipadores de los últimos siglos, sino que los expanda. Este libro analiza en detalle los resortes del colapsismo como ideología —impregnados de una negligencia política en alza— y reivindica la esperanza fundamentada en las oportunidades específicas de nuestro tiempo. La crítica ha dicho... Este libro analiza en detalle los resortes del colapsismo como ideología —impregnados de una negligencia política en alza— y reivindica la esperanza fundamentada en las oportunidades específicas de nuestro tiempo. «Si hay un desafío para el presente es el climático. Este libro trabaja sobre las pasiones y los imaginarios con los que afrontar ese desafío con energía y ambición transformadora. Pura potencia». Guillermo Zapata «El ecologismo político se ha convertido en un espacio de reflexión trepidante. Abundan los autores con conocimientos técnicos abrumadores, una lucidez política arrolladora y gran capacidad comunicativa. Pero apenas un puñado reúne esas tres cualidades a la vez. Emilio Santiago está entre ellos y este es su mejor libro». César Rendueles «Este brillante, riguroso y nutritivo libro fundamenta la única vía posible para la hegemonía ecologista: la más intranquilizadora, porque se llama 'esperanza' y deja en nuestras manos, en consecuencia, el destino de la humanidad». Santiago Alba Rico «El libro de Emilio Santiago es una llamada de atención inteligente y documentada frente a las tentaciones catastrofistas y contra los efectos de la servidumbre adaptativa». Marina Garcés «Un libro de una densidad humana y emocional apabullante, que atesora una deslumbrante brillantez política e intelectual». Andreu Escrivà «Contra la dejación de responsabilidades: una apelación a la potencia

transformadora de las alternativas que unen ecologismo y justicia social». Cristina Monge *Educación en la naturaleza* Ediciones Paidós

John Ratey, bestselling author and clinical professor of psychiatry at Harvard Medical School, lucidly explains the human brain's workings, and paves the way for a better understanding of how the brain affects who we are. Ratey provides insight into the basic structure and chemistry of the brain, and demonstrates how its systems shape our perceptions, emotions, and behavior. By giving us a greater understanding of how the brain responds to the guidance of its user, he provides us with knowledge that can enable us to improve our lives. In *A User's Guide to the Brain*, Ratey clearly and succinctly surveys what scientists now know about the brain and how we use it. He looks at the brain as a malleable organ capable of improvement and change, like any muscle, and examines the way specific motor functions might be applied to overcome neural disorders ranging from everyday shyness to autism. Drawing on examples from his practice and from everyday life, Ratey illustrates that the most important lesson we can learn about our brains is how to use them to their maximum potential.

Confessions of a Recovering Environmentalist and Other Essays Columbia University Press

One of the enduring traditions of Western literary history, pastoral is often mischaracterized as a catchall for literature about rural themes and nature in general. In *What Is Pastoral?*, distinguished literary historian Paul Alpers argues that pastoral is based upon a fundamental fiction—that the lives of shepherds or other socially humble figures represent the lives of human beings in general. Ranging from Virgil's *Eclogues* to Sarah Orne Jewett's *The Country of the Pointed Firs*, from Shakespeare and Cervantes to Hardy and Frost, this work brings the story of the pastoral tradition, previously limited to classical and Renaissance literature, into the twentieth century. Pastoral reemerges in this account not as a vehicle of nostalgia for some Golden Age, nor of escape to idyllic landscapes, but as a mode bearing witness to the possibilities and problems of human community and shared experience in the real world. A rich and engrossing book, *What Is Pastoral?* will soon take its place as the definitive study of pastoral literature. "Alpers succeeds brilliantly. . . . [He] offers . . . a wealth of new insight into the origins, development, and flowering of the pastoral."—Ann-Maria Contarino, *Renaissance Quarterly*

PANDEMIA GLOBALIZACIÓN ECOLOGÍA ¿QUÉ PIENSA LA HERMENÉUTICA CRÍTICA? Cengage Learning

Mexico

Focusing on the work of A.R. Ammons, Wendell Berry, W.S. Merwin, and Gary Snyder, author Leonard Scigaj shows that just as a sustainable society does not depreciate its resource base, so a sustainable poetry does not restrict interest to language. Over the past thirty years many poets have shown an increasing sensitivity to ecological thinking. But critics trained in poststructuralist language theory often fail to explore the substance of ecopoetry. Scigaj is the first to define ecopoetry as separate and distinct from nature or environmental poetry, marked by its concern with balancing the interests of human beings with the needs of nature. Just as science learned that the earth was not the center of the universe, ecopoetry insists on the recognition that humans are not at the center of the natural world.

El pensamiento ecológico Indiana University Press

We take for granted that only certain kind of things exist – electrons but not angels, passports but not nymphs. This is what we understand as 'reality'. But in fact, 'reality' varies with each era of the world, in turn shaping the field of what is possible to do, think and imagine. Our contemporary age has embraced a troubling and painful form of reality: Technic. Under Technic, the foundations of reality begin to crumble, shrinking the field of the possible and freezing our lives in an anguished state of paralysis. Technic and Magic shows that the way out of the present deadlock lies much deeper than debates on politics or economics. By drawing from an array of Northern and Southern sources – spanning from Heidegger, Junger and Stirner's philosophies, through Pessoa's poetry, to Advaita Vedanta, Bhartrhari, Ibn Arabi, Suhrawardi and Mulla Sadra's theosophies – Magic is presented as an alternative system of reality to Technic. While Technic attempts to capture the world through an 'absolute language', Magic centres its reconstruction of the world around the notion of the 'ineffable' that lies at the heart of existence. Technic and Magic is an original philosophical work, and a timely cultural intervention. It disturbs our understanding of the structure of reality, while restoring it in a new form. This is possibly the most radical act: if we wish to change our world, first we have to change the idea of 'reality' that defines it.

Prismatic Ecology Harvard University Press

In twenty short books, Penguin brings you the classics of the environmental movement. Provocative and playful, *All Art is Ecological* explores the strangeness of living in an age of mass extinction, and shows us that emotions and experience are the basis for a deep philosophical engagement with ecology. Over the past 75 years, a new canon has emerged. As life on Earth has become irrevocably altered by humans, visionary thinkers around the world have raised their voices to defend the planet, and affirm our place at the heart of its restoration. Their words have endured through the decades, becoming the classics of a movement. Together, these books show the richness of environmental thought, and point the way to a fairer, saner, greener world.

Ecology Without Nature CRC Press

". . . a more compelling reading of Kant than any I have ever seen." —David Farrell Krell In this provocative book, Alphonso Lingis argues that not only our thought is governed by an imperative, as Kant had maintained, but, rather, our sensual, sensing, perceiving, and emotional life is continually regulated by imperatives that come to us from the world around us. Through a series of phenomenological sketches drawn from life experiences, Lingis shows that there are directives in

the natural world and in our interactions with others that govern our thought and behavior.

Hyperobjects BAR International Series

Widely praised, "A Neotropical Companion" is an extraordinarily readable introduction to the American tropics, the lands of Central and South America, their rainforests and other ecosystems, and the creatures that live there. 177 color illustrations.

A User's Guide to the Brain Turner

El Instituto Estadounidense de Ciencias Biológicas definió esta obra como la que ha convencido a un mayor número de profesionales de dedicarse a la biología orgánica y ambiental. En esta edición, sus autores integran la ecología evolutiva y de sistemas a

Essential Care John Wiley & Sons

Este libro reúne treinta y cuatro textos filosóficos cosechados durante un Estado de Alarma nunca antes conocido. Se trata de escritos frescos, espontáneos, que no son constructos ni productos... Las espontáneas voces de los textos reunidos en este libro excepcional están muy preparadas: ya sean de jóvenes investigadoras/es y doctores/as, ya de reputadas profesoras y profesores, se trata de filósofas y filósofos, que llevan años pensando y denunciando, con toda la potencia y profundidad de su alma y memoria crítica, las causas que nos han llevado a este Estado de Alarma.

Forest Law Routledge

En 1994 la FAO publicó "Manejo de malezas para países en desarrollo" (Estudio FAO: Producción y protección vegetal No 120), poniendo a disposición del público una importante información sobre control de malezas. Dado que desde esa fecha ha habido una evolución técnica constante en materia de manejo de malezas, la FAO ha actualizado en esta nueva publicación la información actualmente disponible. La publicación contiene información sobre bioecología y problemas de las malezas y varias estrategias de control. El manejo de las malezas debe concordar con los problemas específicos que se plantean en el campo y, por lo tanto, cierto conocimiento básico sobre la bioecología de las malezas es necesario para manejar correctamente la infestación en el campo."

What Is Pastoral? Cambridge University Press

This volume extends the insights of queer theory in order to unsettle or "queer" our understandings of "religion," "science," and the relationship between them. It asks how queer religion, science, and philosophy can and/or should be as a way to continue our conversations and explorations of the world in which we live.

Ecología oscura Plataforma

Utilizando a Darwin y los descubrimientos contemporáneos vinculados a las ciencias biológicas, así como referencias literarias y de la cultura popular, Timothy Morton sostiene en este apasionante, lúcido y sorprendente libro que todas las formas de vida están conectadas en una vasta "malla" que penetra todas las dimensiones de la vida. El pensamiento ecológico es una obra comprometida y accesible que desafiará el pensamiento de los lectores en disciplinas que van desde la teoría crítica hasta el romanticismo y la geografía cultural. Imprescindible.

The Moral Imagination Penguin UK

A provocative and urgent essay collection that asks how we can live with hope in "an age of ecocide" Paul Kingsnorth was once an activist—an ardent environmentalist. He fought against rampant development and the depredations of a corporate world that seemed hell-bent on ignoring

a looming climate crisis in its relentless pursuit of profit. But as the environmental movement began to focus on "sustainability" rather than the defense of wild places for their own sake and as global conditions worsened, he grew disenchanted with the movement that he once embraced. He gave up what he saw as the false hope that residents of the First World would ever make the kind of sacrifices that might avert the severe consequences of climate change. Full of grief and fury as well as passionate, lyrical evocations of nature and the wild, *Confessions of a Recovering Environmentalist* gathers the wave-making essays that have charted the change in Kingsnorth's thinking. In them he articulates a new vision that he calls "dark ecology," which stands firmly in opposition to the belief that technology can save us, and he argues for a renewed balance between the human and nonhuman worlds. This iconoclastic, fearless, and ultimately hopeful book, which includes the much-discussed "Uncivilization" manifesto, asks hard questions about how we've lived and how we should live.

All Art is Ecological Cambridge University Press

In *Beyond the World's End* T. J. Demos explores cultural practices that provide radical propositions for living in a world beset by environmental and political crises. Rethinking relationships between aesthetics and an expanded political ecology that foregrounds just futurity, Demos examines how contemporary artists are diversely addressing urgent themes, including John Akomfrah's cinematic entanglements of racial capitalism with current environmental threats, the visual politics of climate refugees in work by Forensic Architecture and Teddy Cruz and Fonna Forman, and moving images of Afrofuturist climate justice in projects by Arthur Jafa and Martine Syms. Demos considers video and mixed-media art that responds to resource extraction in works by Angela Melitopoulos, Allora & Calzadilla, and Ursula Biemann, as well as the multispecies ecologies of Terike Haapoja and Public Studio. Throughout Demos contends that contemporary intersections of aesthetics and politics, as exemplified in the Standing Rock #NoDAPL campaign and the Zad's autonomous zone in France, are creating the imaginaries that will be crucial to building a socially just and flourishing future.

Contra el mito del colapso ecológico Editorial SAL TERRAE

Having set global warming in irreversible motion, we are facing the possibility of ecological catastrophe. But the environmental emergency is also a crisis for our philosophical habits of thought, confronting us with a problem that seems to defy not only our control but also our understanding. Global warming is perhaps the most dramatic example of what Timothy Morton calls "hyperobjects"—entities of such vast temporal and spatial dimensions that they defeat traditional ideas about what a thing is in the first place. In this book, Morton explains what hyperobjects are and their impact on how we think, how we coexist with one another and with nonhumans, and how we experience our politics, ethics, and art. Moving fluidly between philosophy, science, literature, visual and conceptual art, and popular culture, the book argues that hyperobjects show that the end of the world has already occurred in the sense that concepts such as world, nature, and even environment are no longer a meaningful horizon against which human events take place. Instead of

inhabiting a world, we find ourselves inside a number of hyperobjects, such as climate, nuclear weapons, evolution, or relativity. Such objects put unbearable strains on our normal ways of reasoning. Insisting that we have to reinvent how we think to even begin to comprehend the world we now live in, *Hyperobjects* takes the first steps, outlining a genuinely postmodern ecological approach to thought and action.

Dark Ecology University Press of Kentucky

A highly original study of Shelley's thought in relation to diet, consumption, the body, nature, and culture.

Agroecology University of Chicago Press

Timothy Morton acuñó el término "hiperobjeto" para referirse a las cosas que se distribuyen masivamente en tiempo y espacio en relación con los humanos. Un agujero negro, un campo petrolero, la biosfera o el sistema solar, todos los materiales nucleares de la Tierra, son hiperobjetos. Un hiperobjeto podría ser un producto de manufactura humana de larga duración, como el poliestireno, o también la suma de toda la maquinaria chirriante del capitalismo. Los hiperobjetos son "hiper" en relación con alguna otra entidad, más allá de que esté producida o no por los seres humanos. Tienen muchas características en común: son viscosos, "no-locales", involucran una temporalidad radicalmente distinta de las temporalidades a escala humana a las que estamos acostumbrados. Ocupan una fase espacial de alta dimensionalidad que los vuelve invisibles a los humanos durante ciertos períodos de tiempo. Los hiperobjetos ya han tenido un impacto significativo en el espacio humano psíquico y social. Son directamente responsables de lo que Morton llama "El fin del mundo", volviendo obsoletas tanto la mirada apocalíptica sobre la crisis ambiental, como su negación. Los hiperobjetos ya han inaugurado una nueva fase humana de hipocresía, debilidad e inconsistencia. Tales términos tienen una resonancia específica en este libro que los explora en profundidad.

Sustainable Poetry Arpa

This artist's book accompanies the exhibition of a collaborative project by Swiss artist Ursula Biemann and Brazilian architect Paulo Tavares, presented at the Eli and Edythe Broad Art Museum, MSU in August 2014. *Forest Law* is a dynamic visual-textual engagement with the legal, ecological, cosmological and scientific dimensions of the tropical forest in the Ecuadorian Amazon. A trajectory through a transforming landscape, the book illuminates a series of legal cases and indigenous struggles for the rights of nature, incorporating text fragments, video stills and newly designed maps as well as a selection from legal documents, historical archives and other research material. This publication is coupled with the exhibition catalogue *The Land Grant: Forest Law*.

Ecology and Natural History of Tropical Bees University of Chicago Press

Presents powerful arguments against "Environmental Racism", "Incrementalism" and the "Impotence of Planning." Explores case studies of urban planning, county policies, residential development and more. Submits the authors recommendations for preserving the delicate balance of Floridas ecosystem.
