Information technology is revolutionizing healthcare, and the uptake of health information technologies is rising, but scientific research and industrial and governmental support will be needed if these technologies are to be implemented effectively to build capacity at regional, national and global levels. This book, "Improving Usability, Safety and Patient Outcomes with Health Information Technology", presents papers from the Information Technology and Communications in Health conference, ITCH 2019, held in Victoria, Canada from 14 to 17 February 2019. The conference takes a multi-perspective view of what is needed to move technology forward to sustained and widespread use by transitioning research findings and approaches into practice. Topics range from improvements in usability and training and the need for new and improved designs for information systems, user interfaces and interoperable solutions, to governmental policy, mandates, initiatives and the need for regulation. The knowledge and insights gained from the ITCH 2019 conference will surely stimulate fruitful discussions and

collaboration to bridge research and practice and improve usability, safety and patient outcomes, and the book will be of interest to all those associated with the development, implementation and delivery of health IT solutions.

A new, expanded edition detailing Niagara-on-the-Lake's ghostly inhabitants. Long-dead British soldiers, grieving lovers, lingering spirits — Niagara-on-the-Lake's long and colourful history is kept alive by ghosts of its past. Through historical investigation and eyewitness accounts, Andrew Hind and Maria Da Silva share over two dozen ghostly tales: a murdered British officer haunts the Olde Angel Inn, a ghostly widow retaliates against couples, a condemned ghost at the old courthouse pleads his innocence, and ghostly guests at the Prince of Wales Hotel have no desire to check out. Some have called Niagara on-the-Lake Canada's most haunted town, and with so much of its built heritage preserved, the community clearly makes the perfect haunt for age-old spirits.

*Twice Migrated, Twice Displaced* explores the lives of Gulf South Asians who arrived in Canada from India and

Pakistan via Persian Gulf countries. Tania Das Gupta reveals the multiple migration patterns of this group, analyzing themes such as gender, racial, and religious discrimination; class mobility; the formation of transnational families; and identities in a post-9/11 context. This perceptive study demonstrates the effect of neoliberal labour markets and transnationalism on community building, diaspora, citizenship, and a sense of belonging when in Canada.

Boase (political science, U. of Windsor, Ontario) compares how four Canadian provinces dealt with health-care interest groups during the 1970s and 1980s and finds that though they faced similar problems, they dealt with them in different ways that reflected their various political and administrative cultures. She predicts that in the climate of the national health program, the state will try harder to control the political environment and focus more on structure than on politics. As healthcare delivery moves from a provider-centric approach to a more patient-centric approach, systems and payers need to reimagine how care and team-based care is delivered to patients and reimbursed. Thus, the goal should be to see the right patient, by the right provider, in the right place, for the right price, and where appropriate, with the use of the right pharmaceutical(s) - "5

P's". There continues to be a reduction in physicians that are pursuing primary care roles in the United States, thus exacerbating the ability to meet patient demand. Most patient encounters begin with or end with the prescribing of medication. Thus, a future where pharmacists are embedded in primary care settings allows these pharmacists to collaborate at the point-of-prescribing (i.e., in-clinic) and provides tremendous benefits to providers and patients. The pharmacist workforce is educated at the doctoral level, yet vastly underutilized and can assist in a collaborative approach in primary care. The collection of articles in the Special Issue "Embedded Pharmacists in Primary Care" highlight examples of models that have included pharmacists in the ambulatory setting providing services in chronic disease management, comprehensive medication management, and care of specific conditions such as diabetes.

Reproductive choices are at once the most private and intimate decisions we make in our lives and undeniably also among the most public. Reproductive decision making takes place in a web of overlapping concerns - political and ideological, socio-economic, health and health care - all of which engage the public and involve strongly held opinions and attitudes about appropriate conduct on the part of individuals and the state. *Law, Policy and Reproductive Autonomy* examines the idea of reproductive autonomy, noting that in attempting to look closely at the contours of the concept, we begin to see some uncertainty about its meaning and legal implications - about how to understand reproductive autonomy and how to value it. Both mainstream and feminist literature about autonomy contribute

valuable insights into the meaning and implications of reproductive autonomy. The developing feminist literature on relational autonomy provides a useful starting point for a contextualised conception of reproductive autonomy that creates the opportunity for meaningful exercise of reproductive choice. With a contextualised approach to reproductive autonomy as a backdrop, the book traces aspects of the regulation of reproduction in Canadian, English, US and Australian law and policy, arguing that not all reproductive decisions necessarily demand the same level of deference in law and policy, and making recommendations for reform.
