Le premier livre conçu comme une appli, accessible du bout des doigts... Découvrez le langage du visage : Avez-vous déjà remarqué ces petits « tics » corporels : toucher le lobe de l'oreille en répondant à une question, frotter son nez en écoutant son interlocuteur, pincer sa joue tout en souriant, caresser son menton, masser ses sourcils... Ces gestes parlent pour nous et traduisent « nos états d'âme ». Ils nous échappent et peuvent parfois être en contradiction avec nos paroles. Comprendre ces mouvements vous permettra de vous assurer de la sincérité de votre interlocuteur, quel que soit la nature de votre relation.

In this paper, Lt. Col. Devin L. Cate tackles the question of whether an air superiority fighter is relevant to warfare in the twenty-first century. Critics of the F/A-22, the US Air Force's next generation air superiority fighter, have identified it as a cold war relic - unjustifiably expensive and out of step with the Department of Defense (DoD) transformation. Colonel Cate argues that the six operational goals of the DoD transformation, as defined in the Quadrennial Defense Review Report (QDR) of 2001, actually demand a highly capable air superiority fighter. He shows how achieving these transformational operational goals requires performance of the four offensive counterair functions of surface attack, fighter sweep, escort, and suppression of enemy air defenses (SEAD), as well as defensive counterair. He demonstrates that only an air superiority fighter can efficiently and effectively satisfy all these functions. Colonel Cate then identifies the operational requirements for an air superiority fighter to adequately contribute to the operational goals of the transformation. These requirements are superlative air-to-air and air-to-ground performance, survivability against modern air defense systems, and a capable sensor suite that allows the fighter to be a sensor-shooter and participate in the joint data network. Finally, Colonel Cate assesses the leading candidates for a twenty-first century fighter - the F-15C/E, F/A-22, F-35A, uninhabited combat aerial vehicle (UCAV), and the common aerospace vehicle (CAV) - against these requirements. The proliferation of advanced air defense capabilities during the next few years will seriously challenge the suitability of the aging F-15C/E as an air superiority fighter. He notes that while the UCAV holds long-term promise as an air superiority platform, we still have much to do in developing its capability and the doctrine, tactics, and training to employ the UCAV in the air-to-air mission, especially against manned air-to-air threats in close engagements. Consequently, Colonel Cate concludes the F/A-22 is the only fighter that will meet all the requirements for a transformational air superiority fighter by 2007. This paper provides rich material for discussion not only about the role of the air superiority fighter in the twenty first century but also concerning the nature of defense transformation itself.

Henry O. Pollak Chairman of the International Program Committee Bell Laboratories Murray Hill, New Jersey, USA The Fourth International Congress on Mathematics Education was held in Berkeley, California, USA, August 10-16, 1980. Previous Congresses were held in Lyons in 1969, Exeter in 1972, and Karlsruhe in 1976. Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries; at least half of these come from outside of North America. About 450 persons participated in the program either as speakers or as presiders; approximately 40 percent of these came from the U.S. or Canada. There were four plenary addresses; they were delivered by Hans Freudenthal on major problems of mathematics education, Hermina Sinclair on the relationship between the learning of language and of mathematics, Seymour Papert on the computer as carrier of mathematical culture, and Hua Loo-Keng on popularising and applying mathematical methods. George Polya was the honorary president of the Congress; illness prevented his planned attendance but he sent a brief presentation entitled, "Mathematics Improves the Mind". There was a full program of speakers, panelists, debates, miniconferences, and meetings of working and study groups. In addition, 18 major projects from around the world were invited to make presentations, and various groups representing special areas of concern had the opportunity to meet and to plan their future activities.

Morgan est désormais une sorcière de sang accomplie, dotée d'un puissant pouvoir. Après l'affrontement entre Cal et Hunter auquel elle a participé, elle se sent en danger. Elle a poussé le corps de Hunter dans le fleuve pour protéger Cal, et son corps n'a jamais été retrouvé. Quand Sky, la cousine de Hunter, se met à la surveiller de près, et que Selene, la mère de Cal, se fait de plus en plus intrusive, Morgan comprend qu'elle doit plus que jamais rester sur ses gardes. D'autant que sa relation avec Cal prend un tournant qu'elle n'avait pas prévu. Elle ne le reconnaît plus.
