GUI Design for Android
Apps is the perfect—and

concise—introduction for mobile app developers and designers. Through easy-to-follow tutorials, code samples, and case studies, the book shows the must-know principles for user-interface design

for Android apps running on the Intel platform, including smartphones, tablets and embedded devices. This book is jointly developed for individual learning by Intel Software College and

China Shanghai JiaoTong University, and is excerpted from Android Application Development for the Intel® Platform.

Disability and New

Media Cengage Learning This collection of essays and reflections starts from an analysis of the purposes of foreign language teaching and argues that this should include educational objectives which are ultimately similar to those of education for citizenship. It does so by a journey through reflections on what is

possible and desirable in the classroom and how language teaching has a specific role in education systems which have long had, and often still have, the purpose of encouraging young people to identify with the nation-state. Foreign language education can break through this framework to introduce a critical internationalism. In a 'globalised' and 'internationalised' world, the importance of identification with people beyond the national borders is crucial.

Combined with education for citizenship, foreign language education can offer an education for 'intercultural citizenship'. New-Product Diffusion Models Springer Science & Business Media A thoroughly updated edition of the Windows book that clearly explains the whys and hows of every Windows feature. This successful combination of step-by-step tutorials, screen illustrations, and real-world examples shows users how to install and start Windows 3.1, use

applications with Windows, and optimize Windows performance.

The Autism Revolution

This book constitutes the refereed proceedings of the 17th International Conference on Mobile Web and Intelligent Information Systems, MobiWIS 2021, held as a virtual event, in August 2021. The 15 full papers presented in this book were carefully reviewed and selected from 40 submissions. The papers of MobiWIS 2021 deal focus on topics such as

security and privacy; web and mobile applications; networking and communication; intelligent information systems; and IoT and ubiquitous computing. *Probability and Statistics with Applications: A Problem Solving Text* Metropolitan Books
The stop-motion sequences of pioneer photographer Eadweard Muybridge captured the moving body on film for the first time and laid the foundation for modern cinema. Yet the man behind the camera lived a

life filled with Victorian melodrama: infidelity, jealousy, betrayal, murder, and an abandoned child. Tried for murder after killing his wife's lover, he was acquitted on the basis of justifiable homicide. Those events, which predate his subsequent obsession with stopping time and freezing motion, become the ghosts that haunt Muybridge in the fictional world of Governor General's Award-winning dramatist Kevin Kerr's play, *Studies in Motion*. Cast of 4 women and 8

men.

Mobility has become a
prominent feature in
African societies.

Populations all over Africa
are both mobile and
politically and
economically marginal.

Yet these populations are
actively engaged in
maintaining social
networks across localities.
Mobilities, ICTs and
marginality in Africa looks
at the dramatic changes
brought about in socially
marginal populations by
new ICTs in general and
mobile phones in
particular. The book aims
to situate the cultural,
social and, in some cases,
transnational context of
ICT appropriation and
virtual connectivity so as
to reposition Africans from
various countries and
contexts as active agents

of social change. The
intricacies of local ICT use
and the dynamics of
mobility in the African
context enables us to
better understand
material cultures,
relationships between
people, new media and
social networking. Equally
explored in relation to
ICTs are the social and
spatial dynamics of
communication,
association and belonging
across spaces -
particularly physical
borders, social boundaries
and confines and
possibilities informed by

the habits of bodies and practices. Mobilities, ICTs and marginality in Africa is rich in theoretically informed case studies that lend themselves to comparative perspectives and to ethnographies from beyond Africa.

 “An in-depth, scientific—yet hopeful and positive—look at how the brain and body work together . . . [Dr. Martha Herbert] has developed a new way of seeing autism.”—Library Journal
 After years of treating patients and analyzing scientific data, Harvard Medical School researcher and clinician Dr. Martha Herbert offers a revolutionary new view of autism and a transformative strategy for dealing with it. Autism, she concludes, is not a

hardwired impairment programmed into a child’s genes and destined to remain fixed forever. Instead, it is the result of a cascade of events, many seemingly minor. And while other doctors may dismiss your child’s physical symptoms—the anxiety, sensory overload, sleeplessness, frequent illnesses or seizures—as coincidental or irrelevant, Dr. Herbert sees them as vital clues to what the underlying problems are, and how to help. Drawing from the newest research, technologies, and

insights, as well as inspiring case studies of both children and adults, Dr. Herbert guides you toward restoring health and resiliency in your loved one with autism. Her specific recommendations aim to provide optimal nutrition, reduce toxic exposures, limit stress, and open the door to learning and creativity. As thousands of families who have cobbled together these solutions themselves already know, this program can have dramatic benefits—for your child with autism,

and for you, your whole family, and perhaps your next baby as well. “Invaluable . . . a must-read . . . Dr. Martha Herbert gets it. She not only gets it, but she puts it out there in an awesome book so the rest of us can get it, too.”—Autism Watch “[Herbert] goes further than most autism specialists. Her impressive science background merges with common sense and even intuitive sense [making] complex scientific and medical materials

seamlessly blend with a holistic viewpoint.”—Relieve Autism “Hope and practical guidance . . . With this easy-to-read book, parents can gain wisdom on how to guide your child to achieve a healthy and thriving life.”—Mom Central [A Handbook of Exposition](#) Apress Product sales, especially for new products, are influenced by many factors. These factors are both internal and external to the selling organization, and are both

controllable and uncontrollable. Due to the enormous complexity of such factors, it is not surprising that product failure rates are relatively high. Indeed, new product failure rates have variously been reported as between 40 and 90 percent. Despite this multitude of factors, marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time. The proliferation of the

internet, the necessity of developing a road map to plan the launch and exit times of various generations of a product, and the shortening of product life cycles are challenging firms to investigate market penetration, or innovation diffusion, models. These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups, such as those identified as

innovators, early adopters, early majority, late majority, and laggards. New Product Diffusion Models aims to distill, synthesize, and integrate the best thinking that is currently available on the theory and practice of new product diffusion models. This state-of-the-art assessment includes contributions by individuals who have been at the forefront of developing and applying these models in industry. The book's twelve chapters are written by a

combined total of thirty-two experts who together represent twenty-five different universities and other organizations in Australia, Europe, Hong Kong, Israel, and the United States. The book will be useful for researchers and students in marketing and technological forecasting, as well as those in other allied disciplines who study relevant aspects of innovation diffusion. Practitioners in high-tech and consumer durable industries should also gain new insights from

New Product Diffusion Models. The book is divided into five parts: I. Overview; II. Strategic, Global, and Digital Environments for Diffusion Analysis; III. Diffusion Models; IV. Estimation and Software. The final section includes a PC-based software program developed by Gary L. Lilien and Arvind Rangaswamy (1998) to implement the Bass diffusion model. A case on high-definition television is included to illustrate the various features of the

software. A free, 15-day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook>. Among the book's many highlights are chapters addressing the implications posed by the internet, globalization, and production policies upon diffusion of new products and technologies in the population. Harvest of Corruption

Boynton/Cook

Never feel helpless again! A loved one is sick, your friend was just in an accident, a family member is facing an emotional crisis.... Have you ever desperately longed to reach out your hand and bring healing to

these needs? At times, our hearts ache with the desire to help, but either we don't know how, or we are afraid and stop short. The truth is, the Holy Spirit within you is ready to heal the sick! Charles and Frances Hunter present solid, biblically based methods of healing that can bring not only physical health but also spiritual health and abundant life to you, your family, and everyone around you.

Running Windows 3.1

Springer

This volume explores the

"intercultural perspective" on foreign language education. From this viewpoint, the focus of language learning is redefined in terms of intercultural rather than communicative competence. Internet-mediation is a praxiological reflex of this conceptual shift in that it affords the embedding of foreign language learning and instruction in the sociocultural and sociopolitical contexts of language use and development in the form of classroom-based

intercultural collaborations between internationally dispersed representatives of the languacultures under study. The contributions to the volume examine the pedagogy, processes, and outcomes of NS-NNS Internet-mediated language and culture learning partnerships in French, German, Spanish, EFL, and Russian from a variety of theoretical and methodological perspectives, including model learning, reflective practice, learner corpus analysis, cultural studies,

ethnography, interactionism, and critical theory. Internet-mediated Intercultural Foreign Language Education represents the 2005 volume of the annual series Issues in Language Program Direction sponsored by the American Association of University Supervisors and Coordinators of Foreign Language Programs under the editorship of Sally Magnan.

Don't Waste Your Cancer Springer
Disability and New Media

examines how digital design is triggering disability when it could be a solution. Video and animation now play a prominent role in the World Wide Web and new types of protocols have been developed to accommodate this increasing complexity. However, as this has happened, the potential for individual users to control how the content is displayed has been diminished. Accessibility choices are often portrayed as merely technical decisions but

they are highly political and betray a disturbing trend of ableist assumption that serve to exclude people with disability. It has been argued that the Internet will not be fully accessible until disability is considered a cultural identity in the same way that class, gender and sexuality are. Kent and Ellis build on this notion using more recent Web 2.0 phenomena, social networking sites, virtual worlds and file sharing. Many of the studies on disability and the web

have focused on the early web, prior to the development of social networking applications such as Facebook, YouTube and Second Life. This book discusses an array of such applications that have grown within and alongside Web 2.0, and analyzes how they both prevent and embrace the inclusion of people with disability.

Mobile Web and Intelligent Information Systems Whitaker House

A wide-ranging investigation of how supposedly

transformative technologies adopted by law enforcement have actually made policing worse—lazier, more reckless, and more discriminatory American law enforcement is a system in crisis. After explosive protests responding to police brutality and discrimination in Baltimore, Ferguson, and a long list of other cities, the vexing question of how to reform the police and curb misconduct stokes tempers and fears on both the right and left.

In the midst of this fierce debate, however, most of us have taken for granted that innovative new technologies can only help. During the early 90s, in the wake of the infamous Rodney King beating, police leaders began looking to corporations and new technologies for help. In the decades since, these technologies have—in theory—given police powerful, previously unthinkable faculties: the ability to incapacitate a suspect without firing a bullet (Tasers); the

capacity to more efficiently assign officers to high-crime areas using computers (Compstat); and, with body cameras, a means of defending against accusations of misconduct. But in this vivid, deeply-reported book, Matt Stroud shows that these tools are overhyped and, in many cases, ineffective. Instead of wrestling with tough fundamental questions about their work, police leaders have looked to technology as a silver bullet and stood by as corporate interests have

insinuated themselves ever deeper into the public institution of law enforcement. With a sweeping history of these changes, *Thin Blue Lie* is a must-read for anyone seeking to understand how policing became what it is today.

Vehicle Body Engineering
Turtleback Books

This book is dedicated to the great scientist and outstanding individual Nikolay Wladimirovich Timofeeff-Ressovsky. The book brings together a number of brief stories/essays about

Timofeeff-Ressovsky including “Stories told by himself”, and scientific chapters addressing his major research areas: genetics, radiobiology, radiation ecology and epidemiology, and evolution. Timofeeff-Ressovsky contributed to several fields of biology and established new directions of scientific research. He often repeated the phrase, which would later become famous: “Science should not be approached with the ferocity of wild animals”. In keeping with

that philosophy, the issues discussed here are still open. Each scientific part starts with a current review; the chapters present leading scientific schools and views. The main theme discussed in the genetics part is mutation variability in the context of linear (replication, transcription, translation) and conformational template processes, and its dependence on phylogenetic group. In turn, the radiobiology chapters focus on the reorganization of DNA,

cell, and population variability under low-dose irradiation, sparking indirect processes and adaptive response. The radiation ecology and epidemiology parts present data on the consequences of nuclear plants and related accidents for ecological systems and human beings. Here some approaches to estimating radiation risks are also offered. Evolution laws are demonstrated in the genomic universe, plant-microbe symbiosis, stabilizing and

destabilizing (directional) selection. The last essay demonstrates the principles of organization operating in local animal populations, which are approached as social organisms of complex systemic nature. The chapter 'Radiation-Induced Aging and Genetic Instability of Mesenchymal Stem Cells: An Issue for Late Health Effects?' is available open access under a CC BY 4.0 license.

Mobile Technologies and Learning Routledge
Rose is a princess, a

Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is

quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

economy Authors are international renowned experts in the field *Peppa Plays Soccer* Faber & Faber
Some say Demiel ben Yusef is the world's most dangerous terrorist, personally responsible for bombings and riots that have claimed the lives of thousands. Others insist he is a man of peace, a miracle worker, and possibly even the Son of God. His trial in New York City for crimes against humanity attracts scores of protestors, as well as media and religious

leaders from around the world. Cynical reporter Alessandra Russo heads to the UN hoping for a piece of the action, but soon becomes entangled in controversy and suspicion when ben Yusef singles her out for attention among all other reporters. As Alessandra begins digging into ben Yusef's past, she is already in more danger than she knows—and when she is falsely accused of murder during her investigation, she is forced to flee New York. On the run from unknown

enemies, Alessandra finds herself on the trail of a global conspiracy and a story that could shake the world to its foundations. Is Demiel ben Yusef the Second Coming or the Antichrist? The truth may lie in the secret history of the Holy Family, a group of Templars who defied the church, and a mysterious relic stained with the sacred blood of Christ Himself.
GUI Design for Android Apps Springer Nature
Having the desire, ability, and belief in yourself to innovate beyond what

past generations ever imagined possible, explore ground none has ever walked on, and live and work in ways no one has ever lived and worked--these skills may not only increase the next generation's chances for success in the new century, in an employability and globally competitive sense. If Stephen Hawking and others are correct, they may be necessary to

ensure our survival. Investing in Our Future: Preparing the Next Generation to Occupy Mars speaks to the need to cultivate new innovators and explorers whose dreams will move us forward, and whose travels will likely take us back to the moon and beyond. Its threefold purpose is: To reignite our passion to be limitless, ever-curious problem solvers, To foster a STEM-

literate citizenry to innovate in ways we cannot yet imagine, and; To frame plans for leveraging what we know to enable the next generation to visit and possibly live and thrive on Mars. In this book, the authors deliver a compelling, succinct, and timely vision for recasting our approach to K-12 education to prepare a changing world for a successful future.
