This work summarises the core knowledge required for each of the six test papers that make up the exam, all in highly succinct bullet point format.

Revision Notes for the
Final FRCR Part A
Cambridge University
Press

This is the first revision guide to map directly to the new structure of the FRCR Final Part A examination (CR2A). Spanning a broad range of topics, the book follows

the core clinical radiology curriculum, covering all modalities. It is divided into 7 test papers, consisting of 120 mixed SBA-type questions with detailed answers in sequential order. Every answer is followed by a short explanation and relevant discussion around the topic with appropriate references. Each paper should take three hours to complete. Delivering over 20 hours of focused exam practice, this guide is a sound investment for trainee radiologists preparing for their Final Part A exam. **Final FRCR Part A Modules 1-3 Single Best Answer MCQS** JP Medical

FRCR Part 1: Cases for the Anatomy Viewing Paper Anshan Pub

In September 2009, the format of the written Radiology FRCR Part 2A examinations changed. The previous negatively-marked true-false MCQs have become obsolete, replaced by 'single best answer' (SBA) questions, with candidates selecting 1 of 5 options, without negativemarking. The author team have themselves recently successfully sat the FRCR exam, and have prior experience in the SBA format, making them ideally suited to write such a book, and have produced an excellent revision guide for the new format exam. There are 750 stem questions covering all 6 modules, including a separate section with a 75 questions-per-module 'mock' examination which readers can use to test themselves against the clock, under examination conditions, to hone their technique. The questions have been extensively researched and cross-checked, with relevant topics being drawn from major radiology textbooks, as well as

current radiological journals such as Clinical Radiology and Radiographics. Answers are given with detailed explanations and references are provided, which can also be used for further reading as appropriate. As a bonus the authors pass on their own proven exam tips and techniques. Key Points • Authors recently sat exams themselves • Over 700 questions

The Final FRCR Cambridge University Press

This is a vital revision aid for postgraduate radiology students taking the Fellowship of the Royal College of Radiology (FRCR) Part 2 final exams. Part 2 comprises two elements: 2a includes a series of six multiple choice exams covering the major body systems, and 2b contains a written exam and an oral viva typically taken at the beginning of the fourth year of specialty training.

Radiological Anatomy for FRCR Part 1 CRC Press

The new FRCR part 1 Anatomy examination comprises 20 cases/images, with five questions about each. The cases are labelled 01 to 20 and the five questions are labelled (a) to (e). The authors have set out to

emulate this format by gathering 200 cases which, from their experience, are representative of the cases on which candidates will be tested. The book consists of 10 tests with 20 cases each, and 5 stem questions each. The answers, along with an explanation and tips, accompany each test at the end of the chapter. This will help candidates to identify the level of anatomical knowledge expected by the Royal College of Radiologists. The aim of this book is not to replace the already available literature in radiological anatomy, but to complement it as a revision guide. Whereas radiological anatomy atlases and textbooks provide images with labels for every possible identifiable structure in an investigation, the cases in this book have only 5 labels, simulating the exam.

Radiological Anatomy for the FRCR. CRC Press

Exclusively focused on preparing candidates for the FRCR Part 1 anatomy viewing paper, this book enables them to practice questions that have the look and feel of the actual exam. Containing eight practice examinations, each with 20 cases which

have been thoroughly reviewed and tested by radiology registrars who have sat the exam, the questions are at increasing levels of difficulty. Screenshots from Osirix and advice on how to approach the exam familiarize candidates with its format. Each exam in the book contains a wide selection of images with all body parts and modalities equally represented to thoroughly test candidates interpretation skills. The 160 images cover all major plain films, CT, MRI, barium studies and other contrast examinations, as well as some of the newer techniques, based on the examples published online by the Royal College of Radiologists.
