This volume brings together contributions from leading specialists in syntax and morphology to explore the complex relation between periphrasis and inflexion from both a synchronic and diachronic perspective. The chapters draw on data from across the Romance language family, including standard and regional varieties and dialects. The relation between periphrasis and inflexion raises questions for both syntax and morphology, and understanding the phenomena involved requires cooperation across these sub-domains. For example, the components that express many periphrases can be interrupted by other words in a way that is common in syntax but not in morphology, and in some contexts, a periphrastic form may be semantically equivalent to a single-word inflected form, with which it arguably forms part

of a paradigmatic set. Patterns of this kind are found across Romance, albeit with significant local differences. Moreover, diachrony is essential in understanding these phenomena, and the rich historical documentation available for Romance allows an in-depth exploration of the changes and variation involved, as different members of the family may instantiate different stages of development. Studying these changes also raises important questions about the relation between attested and reconstructed patterns. Although the empirical focus of the volume is on the Romance languages, the analyses and conclusions presented shed light on the development and nature of similar structures in other language families and provide valuable insights relevant to linguistic theory more broadly.

Rocky landforms dominate large portions of the world's coast. Cliffs and shore platforms form spectacular landscapes, yet when compared to other landforms they are relatively unstudied with many contemporary controversies dating back to the mid-nineteenth century. The past decade has seen a reinvigoration of research driven by advances in technology that now enable precise measurements of erosion to the micron scale and quantification of wave energy onto and through cliff edifices to be made, as well as being able to directly date rock surfaces. In order to integrate this diverse range of research this volume's regional approach first integrates the latest data with longstanding theory and then analyses this research through the boundary

conditions that exist in each area. The volume brings together the research leaders in the field; includes chapters on nearly all the major rock coasts of the world and identifies future research needs.

Silk and Steel Forgotten Books

The study focuses on organized activities within communities experiencing disaster. It is initiated by a description of the nature of disaster involvement on the part of various community organizations. A discussion follows of the different meanings of the term 'disaster' and of the social implications created by differential characteristics of disaster agents. It is suggested that the primary disruption of the social structure is revealed in unplanned changes in interorganizational relationships. Four types of organized behavior are isolated, derived from a cross-classification of the nature of the disaster tasks and the post-impact structure. Using these four types, problems of mobilization and recruitment are discussed as well as the specific operational problems these groups experience functioning under disaster conditions. A final chapter deals with the implications of disaster research in dealing with the organizational consequences of a nuclear catastrophe.

"She longed to plunge a dagger into his handsome back. She had mastered the arts of war, not love. Disguised as a man, she fought as fiercely as any Scots warrior. Then an English soldier with blazing blue eyes stormed her castle walls and exposed Jamelyn's shocking secret. The last defender of Raven's Keep was not a man but a shapely auburn-haired beauty! Even after the treacherous king made her marry Justin, her conqueror, she vowed never to surrender. Yet a smoldering passion lay between them, ready to burst into a roaring inferno. The novel of a passionate woman who could fight anything-- except love."--Back cover.

This exceptional volume deals with the hotly contested legal status of the Paracels and the Spratlys, two inhospitable archipelagos located in the South China Sea, sovereignty over which is disputed by several states. The author investigates the contribution which international law can make towards determining the rights of all parties involved. In order to do so she goes back into history to find out at each stage what the actual situation was and what its legal significance was in terms of the legal categories of the time. The originality of this work, compared to others already published on this topic,

lies in its analysis of the valuable French archives. Not only these archives, but also existing legal writings have served as a basis for the investigation into the status of the archipelagos. The book sheds new and significant light on this important question.

Excerpt from Syllabus of a Course of Lectures on Elementary Geology It is the aim to begin with those phenomena with which the average student is most likely to be familiar, and by using this familiarity to branch out so as to Cover the whole field, in so far as it can be done in such an elementary course Of lectures. The order of presentation is approximately that followed in the text-books. The student cannot be too deeply impressed with the fact that, if he is to get a real knowledge Of geology, he

must go out Of doors and see it face to face. No amount Of book study, however important and thorough it may be, can take the place Of this field study. But neither must books be neglected, for they contain the results of what others have seen and thought. The foot-note references will enable students to extend their knowledge by reading. These references are not intended to be full, but the papers cited almost invariably mention others upon the same subject, and some of them contain full bibliographies.
