South Korean cinema is a striking example of non-Western contemporary cinematic success. Thanks to the increasing numbers of moviegoers and domestic films produced, South Korea has become one of the world's major film markets. In 2001, the South Korean film industry became the first in recent history to reclaim its domestic market from Hollywood and continues to maintain around a 50 percent market share today. High-quality South Korean films are increasingly entering global film markets and connecting with international audiences in commercial cinemas and art theatres, and at major international film festivals. Despite this growing recognition of the films themselves, Korean cinema's rich heritage has not heretofore received significant scholarly attention in English-language publications. This groundbreaking collection of thirty-five essays by a wide range of academic specialists situates current scholarship on Korean cinema within the ongoing theoretical debates in contemporary global film studies. Chapters explore key films of Korean cinema, from Sweet Dream, Madame Freedom, The Housemaid, and The March of Fools to Oldboy, The Host, and Train to Busan, as well as major directors such as Shin Sang-ok, Kim Ki-young, Im Kwon-taek, Bong Joon-ho, Hong Sang-soo, Park Chan-wook, and Lee Chang-dong. While the chapters provide in-depth analyses of particular films, together they cohere into a detailed and multidimensional presentation of Korean cinema's cumulative history and broader significance. With its historical and critical scope, abundance of new research, and detailed discussion of important individual films, Rediscovering Korean Cinema is at once an accessible classroom text and a deeply informative compendium for scholars of Korean and East Asian studies, cinema and media studies, and communications. It will also be an essential resource for film industry professionals and anyone interested in international cinema.

This is the first book to offer a comprehensive overview for anyone wanting to understand the benefits and opportunities of ray tracing, as well as some of the challenges, without having to learn how to program or be an optics scientist. It demystifies ray tracing and brings forward the need and benefit of using ray tracing throughout the development of a film, product, or building — from pitch to prototype to marketing. Ray Tracing and Rendering clarifies the difference between conventional faked rendering and physically correct, photo-realistic ray traced rendering, and explains how programmer's time, and backend compositing time are saved while producing more accurate representations with 3D models that move. Often considered an esoteric subject the author takes ray tracing out of the confines of the programmer's lair and shows how all levels of users from concept to construction and sales can benefit without being forced to be a practitioner. It treats both theoretical and practical aspects of the subject as well as giving insights into all the major ray tracing programs and how many of them came about. It will enrich the readers' understanding of what a difference an accurate high-fidelity image can make to the viewer — our eyes are incredibly sensitive to flaws and distortions and we quickly disregard things that look phony or unreal. Such dismissal by a potential user or customer can spell disaster for a supplier, producer, or developer. If it looks real it will sell, even if it is a fantasy animation. Ray tracing is now within reach of every producer and marketer, and at prices one can afford, and with production times that meet the demands of today's fast world.

[Exploring 3D Modeling with Cinema 4D R19](#) Independently Published

Eddie Armer explains that life drawing is about learning to interpret the world visually through careful observation and freeing up the mind. He demonstrates various approaches to drawing from life and a range of techniques and disciplines. He begins by discussing pencil, ballpoint pen, wax crayons and charcoal as media. He then goes on to explain how to set up a model in a simple pose, and shows step by step how to produce a drawing in less than ten minutes. There are then a series of gesture drawings done in two minutes. There are chapters on line, the rhythm of line and tone and shading, scribble drawing, using charcoal and foreshortening, with exercises for the reader to try. There are four full step by step demonstrations, and finally there is advice on drawing faces, hands and feet.
