Farmers, who own or rent

most of the private land in
America, hold the key not
only to the nation's food
supply, but also to
managing community

growth, maintaining an attractive landscape, and protecting water and wildlife resources. While the issue of protecting farmland and open space is not new, the intensity of the challenge has increased. Farmers are harder pressed to make a living, and rural and suburban communities are struggling to accommodate increasing populations and the development that comes with them. *Holding Our Ground* can help landowners and communities devise and

implement effective strategies for protecting farmland. The book: discusses the reasons for protecting farmland and how to make those reasons widely known and understood describes the business of farming, federal government farm programs, and the role of land in farmers's decisions analyzes federal, state, and local farmland protection efforts and techniques explores a variety of land protection options including purchase of development rights; transfer of

development rights; private land trusts; and financial, tax, and estate planning reviews the strengths and weaknesses of the farmland protection tools available The authors describe the many challenges involved in protecting farmland and explain how to create a package of techniques that can meet those challenges. In addition, they offer appendixes with model zoning ordinances, nuisance disclaimers, conservation easements, and other documents that

individuals and communities need to carry out the programs discussed. Holding Our Ground provides citizens, elected officials, planners, and landowners with a solid basis for understanding the issues behind farmland protection, and will be an invaluable resource in developing techniques and programs for achieving long-term protection goals.

• Another must-have title from the authors of the

bestselling *Bowhunting Pressured Whitetails* (0-8117-2819-6) • Lays out a hunting program for the entire year, including preparation and training during the off-season • Especially useful for hunting high-pressure areas and it explains how to best take advantage of the rut Father-and-son team John and Chris Eberhart have joined once again to share cutting-edge information and advice on hunting whitetail bucks in increasingly hard-hunted environments. Their year-

long program starts early in the off-season, where careful scouting, training, and planning create the foundation for a successful hunting year. Then, once the fall rolls around, the authors explain the scent control and scouting tactics that have helped them to bag trophy bucks in some of the most pressured parts of the country. They also cover hunting in the rain, suburban hunting, and various other special situations. Packed with vital information and fresh insights, *Precision*

Bowhunting belongs on the bookshelf of every serious bowhunter.

Endangered Species Act--incentives to Encourage Conservation by Private Landowners

Standing on the broken ground of resource extraction settings, the state is sometimes like a chimera: its appearance and intentions are misleading and, for some actors, it is unknowable and incomprehensible. It may be easily mistaken for someone or something

else, like a mining company, for example. With rich ethnographic material, this volume tackles critical questions about the nature of contemporary states, studied from the perspective of resource extraction projects in Papua New Guinea, Australia and beyond. It brings together a sustained focus on the unstable and often dialectical relationship between the presence and the absence of the state in the context of resource extraction.

Across the chapters, contributors discuss cases of proposed mining ventures, existing large-scale mining operations and the extraction of natural gas. Together, they illustrate how the concept of absent presence can be brought to life and how it can enhance our understanding of the state as well as relations and processes forming in extractive contexts, thus providing a novel contribution to the anthropology of the state and the anthropology of

extraction. 'The Absent Presence fills a major gap in our knowledge about the relationship between states and companies – at a time when resource extraction seems to be more contested than ever. Bainton and Skrzypek have curated an incredibly impressive volume that should be read by all those interested in exploring corporate and state power, and the ever-present impacts of extraction. A highly recommended read.' — Professor Deanna Kemp,

Director of the Centre for Social Responsibility in Mining, The University of Queensland 'Countless books have been written on the sovereign state and how it imposes a particular kind of order on economic and social interactions. What is original and compelling about this collection is the portrait of how two very different states converge when it comes to "extractive ventures". From the presumption of exclusive sovereignty over mineral resources, to the bargains that are

struck with major (often global) corporations, and the relative indifference to environmental impacts, there is a remarkable consistency in the patterns that are referred to as "state effects". These effects are brought from the background to the foreground in this book through the blending of creative and critical thinking with detailed empirical research.' — Tim Dunne, Pro-Vice-Chancellor and Professor of International Relations, The University of Queensland 'This brilliant

and intriguing title provides a timely contribution to understanding the actual functions and strategies of state (and state-like) institutions in resource arenas. The dialectics of presence-absence and its refractions at different levels and scales of government allow the authors to go beyond stereotypes about the (strong, weak, failed or corrupt) state, highlighting more commonalities than expected between Papua New Guinea and Australia,

and even New Caledonia.’ — Dr Pierre-Yves Le Meur, Anthropologist, Senior Researcher, French National Research Institute for Sustainable Development, Joint Research Unit SENS (Knowledge Environment Society)

 This practical, down-to-earth guide for surface

collectors of arrowheads and stone artifacts is designed especially for amateur archaeologists and people interested in learning how to study and collect artifacts safely and responsibly. The author reveals invaluable tips on: where to look for artifacts; how to identify artifacts; where surface collecting is permissible; starting and caring for your own collection. With more than fifty new photographs and illustrations of common and rare artifacts, this book is the perfect addition to libraries of

amateur archaeologists thirsty for knowledge about preserving and interpreting the remains of a prehistoric culture. *Millennium Pipeline Project* Frontiers Media SA Large producers have started to use gas injection for their applications and in the future it is predicted that this trend will increase. This book is the most comprehensive and up-to-date coverage of this technique, which is rapidly increasing in importance and usage in the natural gas and

petroleum industry. The authors, a group of the most well-known and respected in the field, discuss, in a series of papers, this technology and related technologies as to how they can best be used by industry to creating a safer, cleaner environment.
