There is no other time in life when the provision of appropriate nutrition is of greater importance than during infancy and childhood. During this phase of life, characterized by rapid growth and development, an adequate amount and composition of nutrients both in health and disease are of key importance for growth, functional outcomes such as cognition and immune response, and long-term well-being. To provide concise information to readers who seek quick guidance on practical relevant issues in the nutrition of infants, children and adolescents, the editors have developed this compact reference book as busy physicians and other healthcare professionals often find it difficult to devote sufficient time to study elaborate and extensive books on just one aspect of their practice. Moreover, due to the insightful input of a global editorial board, challenges both in affluent and poorer populations are addressed, thus providing a truly international perspective which further contributes to the unique worth of this book.

An appendix, containing the text of the International Code, and the relevant resolutions of the World Health Assembly and the Executive Board of WHO, a bibliography and a detailed index conclude the volume.

The world is facing the greatest healthcare crisis it has ever seen. Chronic disease is shortening our lifespan, destroying our quality of life, bankrupting governments, and threatening the health of future generations. Sadly, conventional medicine, with its focus on managing symptoms, has failed to address this challenge. The result is burned-out physicians, a sicker population, and a broken healthcare system. In *Unconventional Medicine*, Chris Kresser presents a plan to reverse this dangerous trend. He shows how the combination of a genetically aligned diet and lifestyle, functional medicine, and a lean, collaborative practice model can create a system that better serves the needs of both patients and practitioners. The epidemic of chronic illness can be stopped, if patients and practitioners can adapt.
