Computer Vision Systems is a collection of papers presented at the Workshop on Computer Vision Systems held at the University of Massachusetts in Amherst, Massachusetts, on June 1-3, 1977.

Contributors discuss the breadth of problems that must be taken into account in the development of general computer vision systems. Topics covered include the application of system engineering techniques to the design of artificial intelligence systems; representation and segmentation of natural scenes; and pragmatic aspects of machine vision. Psychophysical measures of representation and interpretation are also considered. This monograph is divided into four sections: Issues and Research

Strategies, Segmentation, Theory and Psychology, and Systems. The first chapter explores the problem of recovering the intrinsic characteristics of scenes from images, along with its implications for machine and human vision. The discussion then turns to special-purpose low-level vision systems that can be flexibly reconfigured as the need arises; design, development, and implementation of large systems from the human engineering point of view; and representation of visual information. The next section examines hierarchical relaxation for waveform parsing; the topology and semantics of intensity arrays; and visual images as spatial representations in active memory. The use of edge cues to recognize real-world objects is also analyzed. This text will be a useful resource for systems designers, computer engineers, and

scientists as well as psychologists.

The JavaFX™ technology and platform is essentially Sun's response to Adobe Flash and Microsoft's Silverlight. JavaFX lets developers play with the open-source scripting, desktop, and mobile APIs offered to create dynamic, seamless visual user interfaces (UIs) that are "Flash-like" and beyond... Learn from bestselling JavaFX author Jim Weaver and expert JavaFX developers Weiqi Gao, Stephen Chin, and Dean Iverson to discover the JavaFX technology and platform that enables developers and designers to create rich Internet applications (RIAs) that can run across diverse devices. Covering the JavaFX Script language, JavaFX Mobile, and development tools, Pro JavaFX™ Platform: Script, Desktop and Mobile RIA with Java™ Technology is the first book that fully provides JavaFX version 1.2 code examples that cover virtually every language and API feature. This book contains the following: Tutorials that teach JavaFX 1.2 to an application developer or graphics designer who has had no exposure to JavaFX. These tutorials will be exhaustive, covering virtually every facet of JavaFX Script and are fully updated for the JavaFX 1.2 release. Reference materials on JavaFX 1.2 that augment what is available from the JavaFX 1.2 Language Reference and API documentation. How to take JavaFX 1.2 to other platforms besides the desktop, such as mobile. Visit [projavafx.com](http://projavafx.com) for more resources and information from the authors.
