"This edition has several new features, reflective of the changes that have occurred in our field over the last 5 years since the fifth edition. More and more, the field of digital recording has expanded; however, in order to understand some of the shortcomings and pitfalls of digital EEG, people need to still address the issues of basic analog recording principles. With an increased use of digital recording, laboratories have collected new and different "technical artifacts." We present here an attempt to start a database for such artifacts in a hopes that future editions will continue to expand upon this and offer a fairly complete library for beginning individuals interested in our field. As noted in the fifth edition, epilepsy monitoring units (EMU's) have continued to mushroom. Similar growth has occurred in the

use of EEG monitoring in newborn, cardiac, trauma, and post-operative intensive care units. With the significant advances in wireless communication and easy access to the Internet, such recordings can also be viewed and transmitted locally virtually instantaneously and can allow for well-trained clinical neurophysiologists to see and opine about patients' conditions on a very time-relevant basis. Hopefully, as future generations may show, this ability will significantly influence our patients' outcomes. Similarly, the field of intraoperative clinical neurophysiology for spinal cord function, cranial nerve function, and cranial vascular therapies has continued to evolve along with the wireless and iInternet communications. This has allowed for close monitoring of neurologic function during critical periods of operations, again with a time course that allows for corrective actions to be taken on a meaningful time frame"--Provided by publisher.

This book gives an overview of the research field of artificial cilia, a novel technology for controlling and sensing fluid flow at microscopic scales. This field is inspired by nature, namely by naturally occurring cilia which are tiny hairs covering biological cells and that are used already for over a billion years by nature to generate and sense fluid flow. The research field started less than a decade ago and has grown fast in recent years, since it offers very interesting options for flow control in lab-on-a-chip devices.

The Eleventh Plan (2007-12) sought to build on the gains achieved in the Tenth Plan and shift the economy to a path of faster and more inclusive growth. The Mid-Term Appraisal reviews the experience in the first three years of the Eleventh Plan and seeks to identify sectors where corrective steps may be needed to ensure that growth is broad-based and inclusive. The report specifically reviews the progress made in five critical areas: Aggregate and sectoral growth; Inclusiveness and poverty reduction; Infrastructure development; Plan financing; Governance Focusing on the vulnerable sections of the

population--Scheduled Castes (SCs), Scheduled Tribes (STs), Other Backward Classes (OBCs), women, and minorities, the report assesses the programmes aimed at providing access to health, education, and other essential services, as well as livelihood support to the poor. In addition, it identifies some important policy issues which were not fully recognized at the time the Eleventh Plan was drafted such as an integrated energy policy, water management, climate change, new technologies, and innovation. Going beyond making mid-course corrections, the report calls for an in-depth review of the policies in these areas in order to attain the goal of sustainable development.

The book presents a new focus on the legal philosophical texts of Aristotle, which offers a much richer frame for the understanding of practical thought, legal reasoning and political experience. It allows understanding how human beings interact in a complex world, and how extensive the complexity is which results from humans' own power of self-construction and autonomy. The Aristotelian approach recognizes the limits of rationality and the inevitable and constitutive contingency in Law. All this offers a helpful instrument to understand the changes globalisation imposes to legal experience today. The contributions in this collection do not merely pay attention to private virtues, but focus primarily on public virtues. They deal with the fact that law is dependent on political power and that a person can never be sure about the facts of a case or about the right way to act. They explore the assumption that a detailed knowledge of Aristotle's epistemology is necessary, because of the direct connection between Enlightened reasoning and legal positivism. They pay

attention to the concept of proportionality, which can be seen as a precondition to discuss liberalism.

We gratefully acknowledge the financial support of COST (European Cooperation in Science and Technology), funded by the Horizon 2020 Framework Programme of the European Union. Current grammatical knowledge about particular sign languages is fragmentary and of varying reliability, and it appears scattered in scientific publications where the description is often intertwined with the analysis. In general, comprehensive grammars are a rarity. The SignGram Blueprint is an innovative tool for the grammar writer: a full-fledged guide to describing all components of the grammars of sign languages in a thorough and systematic way, and with the highest scientific standards. The work builds on the existing knowledge in Descriptive Linguistics, but also on the insights from Theoretical Linguistics. It consists of two main parts running in parallel: the Checklist with all the grammatical features and phenomena the grammar writer can address, and the accompanying Manual with the relevant

background information (definitions, methodological caveats, representative examples, tests, pointers to elicitation materials and bibliographical references). The areas covered are Phonology, Morphology, Lexicon, Syntax and Meaning. The Manual is endowed with hyperlinks that connect information across the work and with a pop-up glossary. The SignGram Blueprint will be a landmark for the description of sign language grammars in terms of quality and quantity.

Since the recent creation of a large-scale corpus of Italian Sign Language (LIS), a new research branch has been established to study the sociolinguistic variation characterizing this language in various linguistic domains. However, for nominal modification, the role of language-internal variation remains uncertain. This volume represents the first attempt to investigate sign order variability in this domain, examining what shapes the syntactic structure of LIS nominal expressions. In particular, three empirical studies are presented and discussed: the first two are corpus studies investigating the distribution and duration of nominal modifiers, while the third deals with the syntactic behavior of cardinal numerals, an unexplored area. In this enterprise, three different theoretical dimensions of inquiry are innovatively combined: linguistic typology, generative linguistics, and sociolinguistics. The research setup involves both quantitative and qualitative data. This mixed approach starts from corpus data to present the phenomenon, examine linguistic facts on a large scale, and draw questions from these, and then looks at elicited and judgment-based data to provide valid insights and refine the analysis. Crucially, the combination of different

methods contributes to a better understanding of the mechanisms driving nominal modification in LIS and its internal variation.
