Designed to provide a comprehensive, step-by-step approach to organic process research and development in the pharmaceutical, fine chemical, and agricultural chemical industries, this book describes the steps taken, following synthesis and evaluation, to bring key compounds to market in a cost-effective manner. It describes hands-on, step-by-step, approaches to solving process development problems, including route, reagent, and solvent selection; optimising catalytic reactions; chiral syntheses; and "green chemistry." Second Edition highlights: · Reflects the current thinking in chemical process R&D for small molecules · Retains similar structure and orientation to the first edition. · Contains approx. 85% new material · Primarily new examples (work-up and prospective considerations for pilot plant and manufacturing scale-up) · Some new/expanded topics (e.g. green chemistry, genotoxins, enzymatic processes) · Replaces the first edition, although the first edition contains useful older examples that readers may refer to Provides insights into generating rugged, practical, cost-effective processes for the chemical preparation of "small molecules" Breaks down process optimization into route, reagent and solvent selection, development of reaction conditions, workup, crystallizations and more Presents guidelines for implementing and troubleshooting processes

The massive increase in energy demand and the related rapid development of unconventional reservoirs has opened up exciting new energy supply opportunities along with new, seemingly intractable engineering and research challenges. The energy industry has primarily depended on a heuristic approach—rather than a systematic approach—to optimize and tackle the various challenges when developing new and improving the performance of existing unconventional reservoirs. Industry needs accurate estimations of well production performance and of the cumulative estimated ultimate reserves, accounting for uncertainty. This Special Issue presents 10 original and high-quality research articles related to the modeling of unconventional reservoirs, which showcase advanced methods for fractured reservoir simulation, and improved production forecasting techniques.

So many iconic Fort Lauderdale restaurants have come and gone. From steakhouses to floating eateries and a doughnut shop that catered to a strictly adult audience, these dining destinations served up everything from gourmet seafood to post-beach chill food. Here, you can have another slice at Pizio's Drive-Inn, another heaping plate of pasta at Tina's Spaghetti House, a guilt-free brandy snapp at Fred Wenner's and a final long night at Porky's Hideaway. From the snow crab bisque at Mango's to the key lime baked Alaska from The Caves, authors Todd Bothel and Dan Santoro also serve up vintage recipes that allow readers to re-create classic dishes from these beloved Fort Lauderdale institutions.

This book presents the proceedings of CIRATM-9. The papers present the latest scientific concepts and technological developments in textile and materials of worldwide researchers and practitioners. The conference promotes sharing ideas and emerging technologies and fosters research and development collaborations amongst academia, research institutions and relevant industries. CIRATM is the first international conference applied on textiles in Tunisia and all Maghreb. It is a regular conference organized every two year since 2004. It focuses on all textile and materials fields. It joints together all actors of textile field and share research with many international collaborators. This edition is organized with the collaboration of 4 Tunisian partners and 6 international associates and institutions · Laboratory of Textile Engineering (LGTex, Tunisia), · Monastir university (Tunisia) · Tunisian Association of Textile Researchers (ATCTex, Tunisia) · Le pôle de compétitivité Monastir-El Fejja (mfcpole, Tunisia) · Association of the universities for textiles (AUTEX, International) · Balkan Society of textile engineering (BASTE) · National research & development institute for textile and leather (INCDTP, Bucharest- Romania) · Yazid University (Iran) · Centre d'Essais Textile (Cetelor, Lorraine - France) · Center of Textile Science and Technology (2C2T - University of Minho, Portugal)

This compendium is the result of the FEMS Workshop on "Rapid Diagnosis of Mycoplasmas" which I organized and which took place in Jerusalem, Israel, August 11-23, 1991. The first week's sessions were held at a resort on the outskirts of Jerusalem and consisted of lectures and discussions. This part was modelled along the lines of the Gordon Conference in the USA, i.e., in an intimate atmosphere in which everyone could mix and exchange ideas, and was very beneficial. About 100 scientists from around the world attended the first week. During the first week, the biology, molecular biology and pathophysiology of mycoplasmas, as well as all the main diagnostic methods were covered, including both conventional and the newer technologies. The session on mycoplasmas in the human urogenital tracts was held in conjunction with the Israel Society for the Study and Prevention of Sexually Transmitted Disease. The second week was a laboratory session and was held at the Hebrew University-Hadassah Medical School campus in Ein Karem, Jerusalem. All experiments were conducted by eminent specialists in their field. The lab session had 36 participants from 19 countries who used the most modern techniques for the diagnosis of mycoplasmas in medicine, veterinary medicine and agriculture. The efficacy of several commercial kits were also tested at this time. I want to again thank everyone who helped and supported this workshop, as well as the authors of the various chapters.

This book presents selected topics on processing and properties of ferroelectric materials that are currently the focus of attention in scientific and technical research. Ferro-piezoelectric ceramics are key materials in devices for many applications, such as automotive, healthcare and non-destructive testing. As they are polycrystalline, non-centrosymmetric materials, their piezoelectricity is induced by the so-called poling process. This is based on the principle of polarization reversal by the action of an electric field that characterizes the ferroelectric materials. This book was born with the aim of increasing the awareness of the multifunctionality of ferroelectric materials among different communities, such as researchers, electronic engineers, end-users and manufacturers, working on and with ferro-piezoelectric ceramic materials and devices which are based on them. The initiative to write this book comes from a well-established group of researchers at the Laboratories of Ferroelectric Materials, Materials Science Institute of Madrid (ICMM-CSIC). This group has been working in different areas concerning thin films and bulk ceramic materials since the mid-1980s. It is a partner of the Network of Excellence on Multifunctional and Integrated Piezoelectric Devices (MIND) of the EC, in which the European Institute of Piezoelectric Materials and Devices has its origin.

An outsider, who did not speak the language, at first, I saw only the surface of life in Cairo. I was thrilled to be in the "land of the Pharaohs," which had fascinated me since I was a teen-ager. Gradually, the dark side of Egyptian life began to reveal itself. Spied upon by neighbors, my students, my servant and possibly others, as well as the secret police, I began to watch my words, as I taught my students, in a way I had never done before. Still, I felt that I was safe because I had nothing to hide. Or so I thought. One day, a journalist wrote that teachers were used as CIA agents in countries where the United States had no other representatives. As the Cairo mobs shouted anti-American slogans, I realized just how vulnerable I was. Later, when war rumors began to spread, my greatest fear was being trapped inside Egypt, with my young son, in the middle of a war. My thoughts and energy were focused on the delicate balance between fleeing too soon, or unnecessarily, and being considered a "hysterical woman" by my professional colleagues, or waiting too long before leaving.

Toxicological Risk Assessment and Multisystem Health Impacts From Exposure highlights the emerging problems of human and environmental health attributable to cumulative and multiple sources of long-term exposure to environmental toxicants. The book describes the cellular, biological, immunological, endocrinologic, genetic, and epigenetic effects of long-term exposure. It examines how the combined exposure to nanomaterials, metals, pharmaceuticals, multifrequency radiation, dietary mycotoxins, and pesticides accelerates ecotoxicity in humans, animals, plants, and the larger environment. The book goes on to also offer insights into mixture risk assessments, protocols for evaluating the risks, and how this information can serve the regulatory agencies in setting safer exposure limits. The book is a go-to resource for scientists and professionals in the field tackling the current and emerging trends in modern toxicology and risk assessment. • Bridges basic research with clinical, epidemiological, regulatory, and translational research, conveying both an introductory understanding and the latest developments in the field • Evaluates real-life human health risk assessment for long-term exposures to xenobiotic mixtures and the role they play in contributing to chronic disease • Discusses advances in predictive (in silico) toxicology tools and the benefits of using omics technologies in toxicology research

Dictionnaire igbo-français Penguin

L'igbo est l'une des trois principales langues nigérianes de par le nombre de ses locuteurs. On le parle au sud-est du Nigeria dans cinq des trente-sept États fédéraux : Abia, Anambra, Ebonyi, Enugu et Imo, ainsi que dans une bonne partie des États voisins, Delta et Rivers. Le nombre actuel de ses locuteurs présents dans le pays (y compris ceux qui résident dans les grandes villes de Lagos, Abuja, Ibadan, Kano, Kaduna, Jos, Makurdi ou Zaria) est estimé à une vingtaine de millions. Mais l'igbo est aussi la langue d'une très importante diaspora implantée en Afrique francophone, du Sénégal au Congo, en passant par le Cameroun, et dispersée à travers le monde - en Europe, aux États-Unis et jusqu'en Océanie. Ce volume, qui compte près de 4 000 entrées igbo, est le premier véritable dictionnaire igbo-français. On y trouve le vocabulaire courant, le vocabulaire technique et spécialisé approuvé par le comité de standardisation de l'igbo, ainsi qu'un bon nombre de mots du milieu naturel et de la santé. Un index français-igbo complète le volume.
