A companion series to our "Competitive Mathematics for Gifted Students," the series "Math Challenges for Gifted Students" offers additional material in practice test form. The workbooks are useful for assessment and for development of testing skills. In full color and with fully detailed solutions, the workbooks may be used as a fun introduction to competitive problem solving. However, the problems are a bit more difficult than actual Kangaroo problems, exploring a large number of known 'tips and tricks.' One could say it is much more concentrated in that, unlike actual exams, it has less 'filler' - almost every problem is 'tricky' and embodies a specific strategy. The material is excellent for training purposes and has been used by the authors in seminars with hundreds of the most gifted students in the Bay Area. The workbook contains six 24-question tests. After each test there is an answer key. The tests are followed by detailed solutions. The recommended time limit for each test is of 75 minutes. Students who have not been exposed to competitive problem solving will find this book extremely difficult and will need help from an adult. Without preparation, students who get 'A' in school generally score about 50 points out of 96 possible on Kangaroo level 1-2.

"Global Mathematics and Mathematics Olympiad Graded Assessment Test" consists of separate assessments for the Mathematics and Mathematics Olympiad. Currently, there are 16 levels, with each level corresponding to a grade. Similar to music exams, there is no age restriction for participating in each level of assessment. Furthermore, we do not require participants to achieve a passing grade or above in previous levels or to have participated in previous level assessments, to participate in subsequent levels. "Global Mathematics and Mathematics Olympiad Graded Assessment Test" offers physical and online tests. The transcript and certificate will indicate the exam mode, whether it was taken physically or online, for reference. Participants of a certain age will participate in the "Global Mathematics and Mathematical Olympiad Graded Competition" simultaneously with the "Global Mathematics and Mathematical Olympiad Graded Assessment Test". The following are our visions. 1. To enable individuals with high mathematical aptitude to learn advanced mathematics and Olympiad mathematics more quickly, accelerating human progress and benefiting humanity. 2. In the future, academic qualifications will not be divided; instead, recruitment standards in the workplace will be based on grades obtained in various subjects and their levels from public assessments. 3. People with weaker mathematical abilities should spend the same amount of time mastering basic mathematics. Once they reach the level required for their chosen profession or further studies, they can stop, rather than forcing themselves to study mathematics in higher grades. 4. By utilizing public assessments, we can reduce the workload of teachers, thereby reducing the future demand for mathematics teachers. This allows talented individuals who are capable of dedicating themselves to mathematics education to contribute to an ever-expanding reservoir of mathematical knowledge, facilitating the continuous development of the mathematical field.

This problem book is a collection of 550 math olympiad problems with six levels of difficulty. And it is especially aimed at schoolchildren between 6 and 11 years old, so that the students interested either in preparing for a math competition or simply in practicing entertaining problems to improve their math skills, challenge themselves to solve these interesting problems. This problem book is ideal (and widely recommended) for elementary school children in upper grades or even middle school students, with little or no experience in Math Olympiads and who require comprehensive preparation for any math competition. Likewise, it can also be useful for teachers, parents, and math study circles. Thus, a total of 550 problems with answers are made available to the students for their comprehensive and rigorous preparation, which are divided into six levels of difficulty 0 - 5, where each level of difficulty 1 - 5 includes problems corresponding to their respective school grade, while level 0 includes a set of adaptation problems for beginners in math olympiads. The students without experience in Math Olympiads are encouraged to start from the level 0, regardless of their current school grade. In addition, ten exams are included for each level of difficulty, where each exam consists of 8 problems except those of the level 5 whose exams consist of 15 problems. To be able to face these problems successfully, no greater knowledge is required than that covered in the school curriculum; however, many of these problems require an ingenious approach to be tackled successfully. Students are encouraged to keep trying to solve each problem as a personal challenge, as many times as necessary; and to parents who continue to support their children in their disciplined preparation. Once an answer is obtained, it can be checked against the answers given after each group of exams.
