Quarterly accession lists; beginning with Apr. 1893, the bulletin is limited to "subject lists, special bibliographies, and reprints or facsimiles of original documents, prints and manuscripts in the Library," the accessions being recorded in a separate classified list, Jan.-Apr. 1893, a weekly bulletin Apr. 1893-Apr. 1894, as well as a classified list of later accessions in the last number published of the bulletin itself (Jan. 1896)

Book Chat Publications de la Sorbonne

From cosmopolitan Paris to the sunny Cote d'Azur, from historical Normandy to the rocky Pyrenes, this new edition updates the best of towns, attractions, and landscapes of every region. 100 maps. of color photos.

Mémoire présenté à l'appui du projet définitif du viaduc de Garabit Princeton University Press

This volume covers the second great period of developments in iron construction from 1850, following its establishment as a structural material described in volume 9 of this series. Using the Crystal Palace of 1851 as a starting-point, the papers trace the history of iron-frame construction in Britain, France and America, and show its importance in fireproof construction, and in lattice truss and arch bridge design. A final group of papers illustrates the emergence of steel in framed buildings in both Britain and America. The selection brings out the important and daring contribution of individual engineers in their use of this material.

Science progrès, la nature Rizzoli International Publications

An essential exploration of the engineering aesthetics of celebrated structures from long-span bridges to high-rise buildings What do structures such as the Eiffel Tower, the Brooklyn Bridge, and the concrete roofs of Pier Luigi Nervi have in common? According to The Tower and the Bridge, all are striking examples of structural art, an exciting area distinct from either architecture or machine design. Aided by stunning photographs, David Billington discusses the technical concerns and artistic principles underpinning the well-known projects of leading structural engineer-artists, including Othmar Ammann, Félix Candela, Gustave Eiffel, Fazlur Khan, Robert Maillart, John Roebling, and many others. A classic work, The Tower and the Bridge introduces readers to the fundamental aesthetics of engineering.

A Handbook for Travellers in France ... Routledge

Les ponts en arc font actuellement face au double défi de protéger leur patrimoine et de rivaliser avec d'autres formes plus récentes de structures. La conservation des ponts en arc implique de multiples impératifs : une politique saine d'inspection et de suivi, des méthodes précises d'investigation, une évaluation fiable et un éventuel diagnostic, des moyens efficaces de maintenance, de réparation, de renforcement et d'élargissement. Pendant que des ouvrages existants sont réparés et revalorisés, de nouveaux ponts en arc, de -nies traditionnelles et à " l'échelle humaine ", continuent à se construire, en utilisant des matériaux et procédés améliorés et rentables, assurant longévité et respect de l'environnement. Au premier plan de cette continuité, les concepteurs des ponts en béton, dans les hémisphères Nord et Sud, s'efforcent avec succès de réaliser des portées en arc de plus en plus longues, frôlant les 400 mètres dans les années 1980. Récemment, sur d'autres sites spectaculaires, des records de portées ont été battus par trois ponts en arc respectivement en pierre, en béton, en tubes d'acier remplis de béton. Une telle avancée ne manquera pas d'inciter les ingénieurs à rechercher des formes d'arc encore plus audacieuses et élégantes. Sur le large éventail des thèmes proposés, de nombreux auteurs, de plus de vingt-cinq pays, ont apporté des contributions majeures rappelant que les ponts en arc n'ont rien perdu de leur actualité et que, malgré les leçons assimilées de leur prestigieux héritage, leur conception stimule toujours la créativité des ingénieurs et des architectes. Ces contributions sont réunies dans le présent volume édité à l'occasion de la Troisième Conférence internationale sur les Ponts en Arc, tenue à Paris en septembre 2001. Arch bridges face at present the double challenge of protecting their heritage and competing with other more recent structural forms. The conservation of the arch bridge heritage successively requires sound inspection and monitoring policies, accurate investigative methods, reliable assessment and eventual diagnosis, efficient means for maintenance, repair, strengthening and widening. While existing structures are being repaired and upgraded, new arch bridges, of traditional forms and on a "human scale", continue to be constructed, using improved and cost-effective materials and procedures, ensuring longevity and respect for the environment. In the forefront of this continuity, concrete bridge designers, in the northern and southern hemispheres, have successfully been striving for ever larger arch spans, closely approaching 400 m in the 1980's. Lately, at other spectacular sites, span records were beaten in three arch bridges respectively using stone, concrete and slender concrete-filled steel tubes. This breakthrough may encourage engineers to seek more daring and elegant forms of arch. On the broad spectrum of the suggested topics, numerous authors, from more than twenty-five countries, have recently offered major contributions, reminding that arch bridges have nothing lost of their appeal and that, for all the lessons learnt from their prestigious heritage, their design still simulates the creativity of engineers and architects. These contributions are put together in the present volume edited on the occasion of the Third International Arch Bridge Conference held in Paris in September 2001.

Universal Cyclopaedia and Atlas Presses des Ponts

In the critically acclaimed first edition of this book, Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history. In this extensively revised and expanded new edition, now available in paperback, new insights and a full coverage of recent developments in both design and construction are incorporated. The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made. It then looks in turn at all the elementary forms - arches, domes, beams, slabs and the like - which combine into the more complex forms of complete structures, and at the different classes of the complete forms themselves. The development of each form is traced chronologically, but with an emphasis less on the chronology than on the problems that designers have continually faced in trying to serve new ends with limited means or to serve old ones in new ways. The book concludes with a chapter on the processes of design, showing how the designer's freedom of choice has been widened by a growing understanding of structural behaviour.

Bulletin W. W. Norton & Company

Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges MZli_s, Alice Guy BlachZ and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued throughout the 20th century and beyond. In Encyclopedia of French Film Directors, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age Jean Renoir and RenZ Clair_to French New Wave artists such as Fran_ois Truffaut and Jean-Luc Godard.

Recherches Expérimentales Sur la Résistance de L'air Exécutées À la Tour Eiffel Transportation Research Board

A history of the Eiffel Tower and the civil engineer/architect who built it. This work also covers the tower's influence on society and its impact on architecture, engineering, the arts, etc.

Journey Through France London, J. Murray; Paris, Galignani and Company, Boyveau

Le destin méconnu de celui qui a donné son nom au symbole de Paris ! Lorsque la France découvre sa Tour de 300 mètres pour l'exposition universelle de 1889, Gustave Eiffel pressent qu'elle est le couronnement de son génie. L'ingénieur, porte-drapeau de la révolution industrielle, devient l'icône d'une République à la recherche de son prestige perdu. Reconnu mondialement pour son audace et sa science, ce visionnaire repousse les limites du possible dans la création de ses aériennes constructions de fer : la Tour Eiffel, la Statue de la Liberté, la passerelle de Bordeaux, le viaduc de Garabit, le pont de Porto...et des centaines d'ouvrages d'art dans le monde entier. Mais le parcours de l'entrepreneur croise aussi un des plus grands scandales de son époque, celui du canal de Panama... "Cela a été pour moi un plaisir immense et une très grande fierté de participer à l'aventure de cet ouvrage sur notre ancêtre". Philippe Coupérie Eiffel, arrière-arrière-petit-fils de Gustave Eiffel.

G. Eiffel Spink Books

A beautiful new guide featuring 100 of the most interesting and spectacular locations in France.

Chateau Gaillard Unlimited Publishing LLC

This publication presents the perspectives and insights of the world's present-day authorities on bridge aesthetics and design. Bridge engineers and architects representing 16 nations examine and highlight the aesthetic appearance of existing bridges with the goal of improving tomorrow's bridge design. Supplementing the individual papers is a comprehensive bibliography on bridge aesthetics, containing annotated references to more than 250 books, papers, and articles. There are 245 black-and-white photographs and numerous line drawings plus 24 pages of color plates. Author biographical information is provided and an index of bridges and locations is included. Individual entries into the TRIS data base have been made for the 22 papers and the bibliography.

The International Who's who TheBookEdition

Newly updated history of the Eiffel Tower by a veteran international journalist, with photographs, bibliography, index. Chronicles the tower's design, construction and the historical context that made it a worldwide icon. Interesting story, interestingly told, wrote The New York Times.

Notice sur le Viaduc de Garabit (près Saint-Flour) Macmillan

A catalogue made by collectors for collectors. This year the Spink Maury Catalogue, heir to the prestigious Maury, Ceres and Dallay catalogues, continues its work of research, compiled over generations of philately. It covers all French stamps from 1849 to the present day, offering hundreds of changes - with oddities, new varieties and discoveries presented, as always, in an exceptional way. Included in the new material is the continuation of

the monographic studies, presenting a stamp per page with all varieties known until the First World War; a redesign of types Merson and Pasteur; and a specialised part devoted to Marianne de Beaujard, reviewed in depth. In addition the section on current usage stamps (TUC) is fully updated following feedback from our contributors and readers. France has one of the most beautiful philatelic legacies in the world, and we are pleased to be its modest ambassador to the numerous international readers who join us each year. "Layout and coverage are sumptuous ... The trite phrase "mine of information" does not begin to do justice to this immense achievement. To any collector of France beyond the elementary stage, this would be a bargain at twice the official retail price ... Highly recommended.an absolute must for collectors of French stamps..." Michael Round, Journal of the
