Field and Wave Electromagnetics: Pearson New International E: Cheng an electromagnetic wave encounters the boundary between two different regions, such as air. Technically, all waves carry momentum, but this momentum is suppressed by a factor of $v=c$, where v is the speed of the wave and c is the speed of light. This follows from the relativity fact that energy is equivalent to mass.

In physics, mathematics, and related fields, a wave is a propagating dynamic disturbance (change from equilibrium) of

one or more quantities. Waves can be periodic, in which case those quantities oscillate repeatedly about an equilibrium (resting) value at some frequency. When the entire waveform moves in one direction, it is said to be a
