*Adobe Illustrator: A Complete Course and Compendium of Features* is your guide to building vector graphics, whether you're creating logos, icons, drawings, typogra-

phy, or other illustrations—and regardless of their destination: print, web, video, or mobile. First, with a complete Course that includes a set of projects and lessons derived

from Adobe Certified Instructor Jason Hoppe, you will learn the procedures needed to use Illustrator effectively and professionally. Dozens of lessons are included that can be applied to any graphics you have in mind. Through these step-by-step lessons, you'll be exposed to all of Illustrator's features in practical contexts and its best practices for optimal workflows.

To complete the Course, we'll supply lesson documents and their assets to download. These can even serve as starting points

for your own projects.

Then, for greater depth of knowledge and subsequent reference, you'll use the Compendium to uncover more of the "how" and "why" of Illustrator. With each topic easy to access, you can find and explore all of Illustrator's key features and concepts in depth. With cross references between the Course and Compendium, the two parts of the book complement each other perfectly. Best of all, when the lessons in the Course are done, the Compendium will continue to

serve for months and years to come.

Learn step by step how to:

- Draw basic shapes and lines
- Build graphics using Illustrator's deep and diverse toolset
- Create complex icons using the Pathfinder and Shape Builder
- Use color with predictable and harmonic results

- Work effectively with type
- And much more!

The most comprehensive coverage to date of Air France 447, an Airbus A330 that crashed in the ocean north of Brazil on June 1, 2009, killing all 228 persons on board. Written by A330 Captain, Bill Palmer, this book opens to understanding the actions of the crew, how they failed to

understand and control the problem, and how the airplane works and the part it played. All in easy to understand terms. Addressed are the many contributing aspects of weather, human factors, and airplane system operation and design that the crew could not recover from. How each contributed is covered in detail along with what has been done, and needs to be done in the future to prevent this from happening again. Also see the book's companion website:

If you are either an Airbus-driver or a serious flight simmer, this collection of information is something that should pique your interest. Learning to understand and operate one of the world's most complex machines is a tall request from a simple book like this ... and Captain Mike Ray is up to the task. His treatment of the airplane systems and operational techniques is written in an

interesting and entertaining way ... and makes learning the difficult and complex ... well, almost easy. This over 400 page document is lavishly illustrated in full color to take advantage of the increased learning potential in the use of color. There can be no doubt that the Airbus A320 is a color driven systems airplane and this book attempts to take full advantage of the use of color in describing and illustrating the operations of the airplane systems and controls. Whatever

price penalty is incurred in the purchasing of this color volume is well worth the investment in increased learning potential.

Underdogs, unite!  
Celebrated nonfiction

author Melissa Stewart offers young readers a funny, informative look at some animal "underdogs" that have amazing means of survival. Pee-ew! Should the stinky, skunklike zorilla take a bath? And should the slowpoke Galápagos tortoise get a move on? Everyone knows "cool" animals like elephants and cheetahs, but you should meet these lesser-known creatures that have amazing, creative means of survival! Written with a lively, playful voice, this book introduces

young readers to a variety of animal "underdogs" and explains how characteristics that might seem like weaknesses are critical for finding food and staying safe in an eat-or-be-eaten world. Along with her engaging animal facts, Stewart weaves in a gentle message of understanding and celebrating differences. Stephanie Laberis's bright, humorous, and scientifically accurate illustrations add to the fun.

Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such

as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

AND TRANSFORM YOUR LIFE.” — Marla Friedman, PsyD, PC, board chairman, Badge of Life

What if you could stop panic by tapping into a different part of your brain? After years of working to help sufferers of panic and anxiety, licensed therapist (and pilot) Tom Bunn discovered a highly effective solution that utilizes a part of the brain not affected by the stress hormones that bombard a person experiencing panic. This “unconscious procedural memory” can be programmed to control

panic by preventing the release of stress hormones and activating the parasympathetic nervous system. This process, outlined in Panic Free, sounds complicated but is not, requiring just ten days and no drugs or doctors. Bunn includes specific instructions for dealing with common panic triggers, such as airplane travel, bridges, MRIs, and tunnels. Because panic is profoundly life-limiting, the program Bunn offers can be a real life-changer.

737NG Training Syllabus is a highly detailed, full color book virtually crammed with original graphics and thousands of words of descriptive text that will provide a complete training syllabus for persons wishing to learn to operate the 737NG jet airliner. While intended specifically for the Flight Simulation market, even professional airline pilots will find the information useful and informative. This is a guide intended to teach

"simmers" how to fly the jet the way "the Pros do". Learning to fly the 737NG like a real pilot is a challenging and exciting adventure awaiting computer-pilots. However, as the increasing complexity of the ADD-ON airplane models blurs the boundary between Professional flight training and flight simulation "games", the task seems very difficult .. or even impossible. Captain Mike Ray's "737NG Training Syllabus" IS the document that will make this transition not only

possible, but entertaining and ... well, a whole lot more simple. Written for the beginner as well as the veteran simmer, the profusely illustrated material is crammed with details, diagrams, explanations and useful information. The material starts slowly but builds to a crescendo. It includes a section for the "knows nothing" Ab-initio wannabe pilot and builds to provide information and operational procedures that will provide interesting and useful insight to even the

professional airline pilot community. This beautiful and unique document provides the access toolset to the knowledge base that will allow the ordinary garden variety flight sim addict to cross the bridge between operating the current state of the art home based PC flight simulation programs and the real airline style simulator. This book is a MUST HAVE item for the 737NG computer pilot who wants to fly the incredibly accurate add-on airplanes as if they were real

pilots. This paperback Black and White version of Captain Mike Ray's book on training to fly the 737NG is a great bargain. You get all the same information that is in the pricier (but more beautiful) color version ... and the same graphic and text that makes the volume such a popular item for both professional airline pilots as well as Flight Simmers. So get a copy ... and learn to fly the 737NG like the pros do. [Fini Flight](#) Routledge  
It's been said that the two

worst days in a fighter pilot's career are the day he steps to the jet knowing it's his last flight and the day he steps to the jet not knowing it's his last. After years of serving his country in both the military and a covert paramilitary organization known as PROJECT ARCHANGEL, Cal "Spectre" Martin has retired to the quiet life with his wife and son. As Spectre settles in to his new life as a stay-at-home dad and aspiring fiction writer, a face from the past pays him a visit

hoping to get Spectre's help one last time. With denuclearization and peace talks underway between the United States and North Korea, a high level general within the North Korean regime has other plans. Intelligence sources have confirmed that the general intends to launch an Electro Magnetic Pulse weapon and detonate it over the United States, setting in motion a third world war. Covert operative Freddie "Kruger" Mack's request is simple - select and train

the pilots that will fly the mission deep into North Korea to stand down the looming threat. But as Spectre reluctantly agrees to help and the mission gets underway, he soon realizes that one way or another, he may be stepping to a jet for his last time. With the stakes higher than they've ever been, Spectre and his team must overcome interference from foreign agents while planning and training for a suicide mission into North Korea. *Head Strong*

Porter's five forces analysis is a framework for analyzing the level of competition within an industry and business strategy development. It draws upon industrial organization (IO) economics to derive five forces that determine the competitive intensity and therefore the attractiveness of an industry. Attractiveness in this context refers to the overall industry profitability. An "unattractive" industry is one in which the combination of these five

forces acts to drive down overall profitability. A very unattractive industry would be one approaching "pure competition," in which available profits for all firms are driven to normal profit. This analysis is associated with its principal innovator Michael E. Porter of Harvard University. This updated and expanded second edition of Book provides a user-friendly introduction to the subject, Taking a clear structural framework, it guides the reader through the subject's core

elements. A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the reader understands even the most complex of concepts. This succinct and enlightening overview is a required reading for all those interested in the subject . We hope you find this book useful in shaping your future career & Business.

Sind Verhaltenstherapie und Zwang - wie immer wieder behauptet - unvereinbar? Schliessen sich Freiheitsentzug und Beziehungsarbeit gegenseitig aus? Endet die Unterbringung von Kindern und Jugendlichen in geschlossenen Heimen sogar in der Deformation ihrer Persönlichkeit? In der Kinder- und Jugendhilfe werden diese Fragen seit Jahrzehnten mit immer wieder wechselnden Vorzeichen heftig diskutiert. Nur auf wissenschaftlich

belastbare Daten kann sich eigentlich niemand berufen. Bernhard Stadlers empirisch fundierte Studie zu dieser Thematik schliesst damit eine Forschungslücke und widerlegt so manches Vorurteil. Am Beispiel des Mädchenheims Gauting und seiner Arbeit mit dissozialen Mädchen zeigt er, in welchen Fällen freiheitsentziehende Massnahmen in der Jugendhilfe helfen können und wo nicht. Er bezieht dazu subjektive Einschätzungen der Jugendlichen und ihrer

Betreuer ebenso ein wie Testergebnisse, Interviews und die Diagnosen eines externen Instituts.

Airframes & Systems, Electrics, Powerplant, and Emergency Equipment (ASEPE) - Aeroplanes, subject 021, covers a broad swathe of information that is examined in one paper. To make this information manageable, the 021 subject is broken down into three volumes; these

are Airframes & Systems [which incorporates Emergency Equipment], Electrics, and Powerplant. Airframes & Systems provides a good grounding in the technical aspect of an aircraft's structure and systems, detailing, for examination purposes where required, the regulations that the student has to know and the methods by which these requirements are met. As with other subjects, there will always be areas that the student has studied that are not questioned in the exam.

Learning this information is not effort wasted, as the information given within the volume provides the foundation knowledge on which the type rating course can be built.
