Cupid became a popular figure in the literary and visual culture of post-Reformation England. He served to articulate and debate the new Protestant theory of desire, inspiring a dark version of love tragedy in which Cupid kills. But he was also implicated in other controversies, as the object of idolatrous, Catholic worship and as an adversary to female rule: Elizabeth I's encounters with Cupid were a crucial feature of her image-construction and changed subtly throughout her reign. Covering a wide variety of material such as paintings, emblems and jewellery, but focusing mainly on poetry and drama, including works by Sidney, Shakespeare, Marlowe and Spenser, Kingsley-Smith illuminates

the Protestant struggle to categorise and control desire and the ways in which Cupid disrupted this process. An original perspective on early modern desire, the book will appeal to anyone interested in the literature, drama, gender politics and art history of the English Renaissance.

This book illustrates how MAPLE can be used to supplement a standard, elementary text in ordinary and partial differential equation. MAPLE is used with several purposes in mind. The authors are firm believers in the teaching of mathematics as an experimental science where the student does numerous calculations and then synthesizes these experiments into a general theory. Projects based on the concept of writing generic programs test a student's understanding of the theoretical material of the course. A student who can solve a general problem certainly can solve a specialized problem. The authors show MAPLE has a built-in program for doing these problems. While it is important for the student to learn MAPLE'S in built programs, using these alone removes the student from the conceptual nature of differential equations. The goal of the book

is to teach the students enough about the computer algebra system MAPLE so that it can be used in an investigative way. The investigative materials which are present in the book are done in desk calculator mode DCM, that is the calculations are in the order command line followed by output line. Frequently, this approach eventually leads to a program or procedure in MAPLE designated by proc and completed by end proc. This book was developed through ten years of instruction in the differential equations course. Table of Contents 1. Introduction to the Maple DEtools 2. First-order Differential Equations 3. Numerical Methods for First Order Equations 4. The Theory of Second Order Differential Equations with Con- 5. Applications of Second Order Linear Equations 6. An entirely new kind of biography, *Built of Books* explores the mind and personality of Oscar Wilde through his taste in books This intimate account of Oscar Wilde's life and writings is richer, livelier, and more personal than any book available about the brilliant writer, revealing a man who built himself out of books. His library was his reality, the source of so much that was vital to his life. A reader first, his readerly encounters, out of all of life's pursuits, are seen to be as significant as his most important relationships with friends, family, or lovers. Wilde's library, which Thomas Wright spent twenty years reading, provides the intellectual (and emotional) climate at the core of this deeply engaging portrait. One of the book's happiest surprises is the story of the author's adventure reading Wilde's library. Reminiscent of Jorge Luis Borges's fictional hero who enters Cervantes's mind by saturating himself in the culture of sixteenth-century Spain, Wright employs Wilde as his own Virgilian guide to world literature. We come to understand how

reading can be an extremely sensual experience, producing a physical as well as a spiritual delight.

"Climate change? Global warming?"... We've probably all heard these words over and over again, from media reporters, from elected officials, and even from friends and co-workers. Scientists argue about what they mean for our future. What is the truth? How can we decipher exactly what really are the effects of environmental damage? Where can we go to get dependable, clearly-written information so we can join in the conversation and take the right action?

THE CURIOSITY GUIDE TO GLOBAL WARMING fills that need, with a scientifically accurate introduction to perhaps the most important issue of our time. It unravels the mysteries of nature and settles any issue of "reasonable doubt" about the reality of global climate change. Dr. Ernest Zebrowski, a prominent scientist and educator, examines everything from melting glaciers and disappearing snow covers to increased levels of carbon dioxide in our atmosphere; patterns of climate change through the centuries, and the potentially disastrous effects (including rising seas, more violent storms, and alterations in agricultural productivity) of environmental damage. If you need to understand what's in the news, in print and on line about this subject, this is the one book to read. From the Hardcover edition.

By using a series of studies of contemporary mainstream Hollywood movies - "Blue Velvet, Wall Street, Crimes and Misdemeanors, When Harry Met Sally, Sex Lies and Videotape, Do the Right Thing" - Norman Denzin explores the tension between ideas of the postmodern, and traditional ways of analyzing society. The discussion moves between two forms of text: social theory and cinematic representations of contemporary life. Denzin analyzes the ideas of society embedded in poststructuralism, postmodernism, feminism, cultural studies and Marxism through the ideas of key theorists like Baudrillard, Barthes, Habermas, Jameson, Bourdieu and

Derrida. He relates these to the problematic of the postmodern self as exposed in cinema centering on the decisive performance of race, gender and class.

Are you one of the millions of people who suffer from low back pain? While it is important that patients with low back pain educate themselves about the lower back, the information available is often more confusing than it is helpful. A single source of information should not be taken as the only truth, as this can lead to misconceptions and misunderstandings in the diagnosis and treatment of low back pain. According to author Mario A. Gutierrez, MD, not all patients with low back pain are the same, and not all back conditions have a common cause. Dr. Gutierrez draws on more than twenty years of neurosurgery experience and direct patient contact to guide back pain sufferers in their quest for reliable information and diagnosis with topics such as: Causes of low back pain Current treatments for low back pain Low back surgery options Treatment myths Rehabilitation Health insurance/disability Prevention Whether you're a patient seeking answers, an aspiring medical professional, or a practicing physician,

Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

Viral hepatitis B or C is the most common cause of chronic liver disease worldwide and accounts for about 80% of all hepatocellular carcinoma cases. Thus, combating viral hepatitis remains one of the most pressing public health issues today. Animal models and cell-based systems are essential tools for addressing the many still unresolved basic and clinical problems. Experimental models are needed to better understand the viral life cycles, pathogenetic aspects and natural defense mechanisms, while preclinical models are required for evaluating novel preemptive and therapeutic strategies.
