Macromolecular Protein Complexes III: Structure and Function W.H. Freeman
Volume 60 of Reviews in Mineralogy and Geochemistry assesses the current state of knowledge of lunar geoscience, given the data sets provided by missions of the 1990's, and lists remaining key questions as well as new ones for future exploration to address. It documents how a planet or moon other than the world on which we live can be studied and understood in light of integrated suites of specific kinds of information. The Moon is the only body other than Earth for which we have material samples of known geologic context for study. This volume seeks to show how the different kinds of information gained about the Moon relate to each other and also to learn from this experience, thus allowing more efficient planning for the exploration of other worlds.

Affordable and effective domestic wastewater treatment is a critical issue in public health and disease prevention around the world, particularly so in developing countries which often lack the financial and technical resources necessary for proper treatment facilities. This practical guide provides state-of-the-art coverage of methods for domestic wastewater treatment and provides a foundation to the practical design of wastewater treatment and re-use systems. The emphasis is on low-cost, low-energy, low-maintenance, high-performance 'natural' systems that contribute to environmental sustainability by producing effluents that can be safely and profitably used in agriculture for crop irrigation and/or in aquaculture, for fish and aquatic vegetable pond fertilization. Modern design methodologies, with worked design examples, are described for waste stabilization ponds, wastewater storage and treatment reservoirs; constructed wetlands, upflow anaerobic sludge blanket reactors, biofilters, aerated lagoons and oxidation ditches. This book is essential reading for engineers, academics and upper-level and graduate students in engineering, wastewater management and public health, and others interested in sustainable and cost-effective

technologies for reducing wastewater-related diseases and environmental damage.

What should a judge do when he must hand down a ruling based on a law that he considers unjust or oppressive? This question is examined through a series of problems concerning unjust law that arose with respect to slavery in nineteenth-century America. "Cover's book is splendid in many ways. His legal history and legal philosophy are both first class. . . . This is, for a change, an interdisciplinary work that is a credit to both disciplines."--Ronald Dworkin, *Times Literary Supplement*
 "Scholars should be grateful to Cover for his often brilliant illumination of tensions created in judges by changing eighteenth- and nineteenth-century jurisprudential attitudes and legal standards. . . . An exciting adventure in interdisciplinary history."--Harold M. Hyman, *American Historical Review*
 "A most articulate, sophisticated, and learned defense of legal formalism. . . . Deserves and needs to be widely read."--Don Roper, *Journal of American History*
 "An excellent illustration of the way in which a burning moral issue relates to the American judicial process. The book thus has both historical value and a very immediate importance."--Edwards A. Stettner, *Annals of the American Academy of Political and Social Science*
 "A really fine book, an important contribution to law and to history."--Louis H. Pollak

This is the first translation of the Quran by an American woman. It is a universal and inclusive translation with the hope that Islam will be better understood in the West. She also challenges the use of the word "to beat" in 4: 34 as meaning "to go away" which is how the Prophet of Islam understood the word as it has historically justified violence against and abuse of Muslim women. "This interpretation must change," she says, "and revert to the way the Prophet understood it."

What can stories of magical engraved rings or prophetic inscriptions on walls tell us about how writing was perceived before print transformed the world? Writing beyond Pen and Parchment introduces readers to a Middle Ages where writing is not confined to manuscripts but is inscribed in the broader material world, in textiles and tombs, on weapons or human skin. Drawing on the work done at the Collaborative Research Centre "Material Text Cultures," (SFB 933) this volume presents a comparative overview of how and where text-bearing artefacts appear in medieval German, Old Norse, British, French, Italian and Iberian literary traditions, and also traces the paths inscribed objects chart across multiple linguistic and cultural traditions. The volume's focus on the raw materials and practices that shaped artefacts both mundane or fantastical in medieval narratives offers a fresh perspective on the medieval world that takes seriously the vibrancy of matter as a vital aspect of textual culture often overlooked.
