Since the first edition of Essentials of Firefighting was published in 1978, more than 2 million firefighters have used the manual for training. Because so many successful firefighters have trained from this manual over three decades, Essentials of Fire Fighting is often referred to as "the bible" of basic firefighter skills. In addition, the information in Essentials is commonly accepted as the standard for fire fighting knowledge in North America. This 5th edition is a completely new revision and includes all the information needed to meet the fire fighting requirements for National Fire Protection Association (NFPA®) 1001, Standard for Fire Fighter Professional Qualifications (2008 edition), Fire Fighter Levels I and II. All photographs and illustrations are in full color. This manual includes instructional tools such as learning objectives, key terms, case histories, and review questions in each chapter to enhance a student's understanding. To help students with psychomotor learning, skill sheets depicting firefighter skills are included in most chapters. These feature step-by-step photographs and instructions for completing each skill. Each manual also includes a bonus CD-ROM that provides additional learning materials, case studies, animations, and learning activities.

This book describes fixed firewater pump installations for industrial facilities from the viewpoint of the end users, fire protection engineers, loss prevention professionals, and those just entering a career in which decisions about fire pump installations must be made. Therefore much background information is given for the necessary requirements and usefulness of a firewater pump and the services that interface with it. This book's primary objective is the provision of practical information and basic background design principles on the application of fixed pumps for fire fighting purposes at industrial facilities, both onshore and offshore. Where specific details are necessary and pertinent to the discussion they are provided, otherwise, these can be found from the applicable fire codes and engineering practices to be applied to the facility. Experience from the installation of fire pumps in the petroleum and chemical industries, historical data, manufacturers specification sheets and regulatory code requirements have been drawn upon for the preparation of the information in this book.

The core principles of structural firefighting are fire behavior, building construction, strategy, tactics, safety and training. Each core principle is examined with relevant on-the-job stories to bring lessons home. Fire departments must constantly train their firefighters and officers in these core principles if they want them to be safe and effective at structure fires. Training is the foundation of all the other core principles, and must be realistic, scenario-based, and hands-on. Never stop learning during your time as a structural firefighter. If you come to a point where you mistakenly believe that you know everything there is to know about fires in and around buildings—watch out—because you have just fallen into the complacency trap. FEATURES --Gain a deeper understanding of how firefighters should approach fires in buildings, with an emphasis on safety and effectiveness --See the latest research from UL and NIST on fire behavior and flow paths, with a discussion of best-practices and up-to-date tactical advice. --An essential, easy-to-read fundamental resource on how to safely and effectively fight fires in buildings of any size or type. "Fire Under Control is a riveting new book that allows you to learn while also seeing how street experiences coincide with printed tactical and scientific fire service information. I always have said that eyes, ears, and experience will equal your education in the fire service and Capt. Steve Bernocco has managed to bring it to light." -- Lt. Chemical facts taught in firefighting training courses are often "isolated facts." In the book, these facts are integrated into an overall chemical-physical concept. Backgrounds are illuminated, and connections can be recognized. The overall understanding is facilitated, tactical measures for the operation become "logical". This book is a translation of the original German 1st edition *Das Chemiewissen für die Feuerwehr* by Torsten Schmiermund, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2019. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
