What do we owe to our descendants? How do we balance their needs against our own? Tim Mulgan develops a new theory of our obligations to future generations, based on a new rule-consequentialist account of the morality of individual reproduction. He argues that the resulting theory accounts for a wide range of independently plausible intuitions - covering individual morality, intergenerational justice, and international justice. In particular, the moderate consequentialist approach is superior to its two main rivals in this area - person-affecting theories and traditional consequentialism. The former fall foul of Parfit's Non-Identity Problem, while the latter are invariably implausibly demanding. Mulgan also claims that most puzzles in contemporary value theory (such as Parfit's Repugnant Conclusion) are actually puzzles in the theory of right action, and can only be solved if we abandon strict consequentialism for a more moderate alternative. The heart of the book is the first systematic exploration of the rule-consequentialist account of the morality of individual reproduction. Mulgan demonstrates that this account is superior to all available alternatives, both consequentialist and non-consequentialist. Once we recognise the intergenerational dimension, moral and political philosophy cannot be considered in isolation. The latter must be founded on the former. Rule consequentialism provides the best foundation for a theory of intergenerational justice. Future People brings together several different contemporary philosophical discussions: obligations to future generations, the morality of individual reproduction, the demands of morality, and international justice. While the focus is on developing a new account, there are also substantial discussions of alternative views, especially contract-based accounts of intergenerational justice and competing forms of consequentialism.

### **Governing for the Future** Edward Elgar Publishing

In times of climate change and public debt, a concern for intergenerational justice should lead us to have a closer look at theories of intergenerational justice. It should also press us to provide institutional design proposals to change the decision-making world that surrounds us. This book provides an exhaustive overview of the most important institutional proposals as well as a systematic and theoretical discussion of their respective features and advantages. It focuses on institutional proposals aimed at taking the interests of future generations more seriously, and does so from the perspective of applied political philosophy, being explicit about the underlying normative choices and the latest developments in the social sciences. It provides citizens, activists, firms, charities, public authorities, policy-analysts, students, and academics with the body of knowledge necessary to understand what our institutional options are and what they entail if we are concerned about today's excessive short-termism.

### **Intergenerational Equity** Council of Europe

Our capacity to reshape the future has never been more powerful. Yet our ability to foresee the consequences of what we do has not kept pace. Is the idea that we have responsibilities to future generations therefore meaningful? This book argues that it is, with the aid of a unique reading of the care ethics tradition.

### **Theories of Institutions** Cambridge University Press

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

### **Care, Uncertainty and Intergenerational Ethics** OUP Oxford

Can people alive now have duties to future generations, the unborn millions? If so, what do we owe them? What does "justice" mean in an intergenerational context, both between people who will coexist at some point, and between generations that will never overlap? In this book, Axel Gosseries provides a forensic examination of these issues, comparing and analyzing various views about what we owe our successors. He discusses links between justice and sustainability, and looks at the implications of the fact that our successors' preferences are heavily influenced by what we will actually leave them and by the education they receive. He also points to how these theoretical considerations apply to real-life issues, ranging from pension reform and Brexit to biodiversity and the climate crisis. He ends by outlining how intergenerational considerations may translate into institutional design. Anyone grappling with the dilemmas of our obligations to the future, from students and scholars to policy makers and active citizens, will find this an invaluable theoretical and practical guide to this moral and political minefield.

Sustainable development requires consideration of the quality of life that future generations will be able to enjoy, and as the adjustment to sustainable lifestyles gathers momentum, the rights of future generations and our responsibility for their wellbeing is becoming a central issue. In this, the first book to address this emerging area of international law, leading experts examine the legal and theoretical frameworks for representing and safeguarding the interests of future generations in current international treaties. This unique volume will be required reading for academics and students of international environmental law and policy. Emmanuel Agius is Senior Lecturer at the Faculty of Theology and Coordinator of the Future Generations Programme at the Foundation for International Studies, University of Malta. Salvino Busuttil is former Director General of the Foundation for International Studies. Future Generations and International Law is the seventh volume in the International Law and Sustainable Development series, co-developed with FIELD. The series aims to address and define the major legal issues associated with sustainable development and to contribute to the progressive development of international law. Other titles in the series are: Greening International Law, Interpreting the Precautionary Principle, Property Rights in the Defence of Nature, Improving

Compliance with International Environmental Law, Greening International Institutions and Quotas in International Environmental Agreements. 'A legal parallel to the Blueprint series - welcome, timely and provocative' David Pearce Originally published in 1997

Co-creating a Public Philosophy for Future Generations Alpha Edition

This highly accessible book provides an extensive and comprehensive overview of current research and theory about why and how we should protect future generations. It exposes how and why the interests of people today and those of future generations are often in conflict and what can be done. It rebuts critical concepts such as Parfits' non-identity paradox and Beckerman's denial of any possibility of intergenerational justice. The core of the book is the lucid application of a veil of ignorance to derive principles of intergenerational justice which show that our duties to posterity are stronger than is often supposed. Tremmel's approach demands that each generation both consider and improve the well-being of future generations. To measure the well-being of future generations Tremmel employs the Human Development Index rather than the metrics of utilitarian subjective happiness. The book thus answers in detailed, concrete terms the two most important questions of every theory of intergenerational justice: what to sustain? and how much to sustain?

Institutions for Future Generations BRILL

A provocative contribution to the climate justice debate Climate change and justice are so closely associated that many people take it for granted that a global climate treaty should—indeed, must—directly address both issues together. But, in fact, this would be a serious mistake, one that, by dooming effective international limits on greenhouse gases, would actually make the world's poor and developing nations far worse off. This is the provocative and original argument of *Climate Change Justice*. Eric Posner and David Weisbach strongly favor both a climate change agreement and efforts to improve economic justice. But they make a powerful case that the best—and possibly only—way to get an effective climate treaty is to exclude measures designed to redistribute wealth or address historical wrongs against underdeveloped countries. In clear language, *Climate Change Justice* proposes four basic principles for designing the only kind of climate treaty that will work—a forward-looking agreement that requires every country to make greenhouse-gas reductions but still makes every country better off in its own view. This kind of treaty has the best chance of actually controlling climate change and improving the welfare of people around the world.

*The History of the Banking Institutions Organized in South Carolina Prior to 1860* John Wiley & Sons

The book focuses on how to enhance the political incentives on democratically-elected governments to protect the interests of future generations.

**Christian Life and Character of the Civil Institutions of the United States** Hardpress Publishing

In this book Professor Weiss combines thorough research and careful analysis with imaginative solutions and a moral fervour, to show how rules of international law can be applied in an intertemporal dimension, and how the basic principles of the intergenerational equity can be developed to provide new standards for human behaviour. She manages to communicate to the reader not only that the situation is getting desperate but also that human intelligence can in time devise adequate remedies, without destroying completely our way of life.

**What is Intergenerational Justice?** Earthscan

The contributors to this volume undertake to establish the foundations and definitions of intergenerational justice and to

explore its capacity to guide us in policy and public opinion judgments we must make to face unprecedented issues. . . We are changing the biosphere and using resources to an extent never contemplated in the history of ethics. Deterioration of our oceans, loss of topsoil, insecurity about potable water supplies, the ozone hole, global warming, and the question about how to handle high-level nuclear waste which remains lethal perhaps 400,000 years from now, are some examples whose consequences reach far beyond inherited principles and policies of responsibility to others. This Handbook works to open a path for debate, extension of our tradition and invention of new thinking on these issues. Craig Walton, University of Nevada, Las Vegas, US More than a Handbook, this collection is a landmark work showing the way to a new ethics of intergenerational responsibility. It raises, in the most comprehensive way, the overarching ethical questions of our time, What are the rights of future generations? and How might present generations establish a philosophical foundation for its responsibilities to generations to come? . Peter Blaze Corcoran, Center for Environmental and Sustainability Education, Florida Gulf Coast University, US This important book provides a rich menu of history, current theory, and future directions in constitutional law, philosophy of rights and justice, and the relations of economics and politics to time, institutions, and the common good. It is enlivened by back-and-forth discussions among the authors (including some disagreements), as well as by applications to important contemporary issues such as climate change, nuclear waste, and public debt. Theoretic considerations are nicely balanced with examples of the means adopted in a number of countries to establish a legal foundation for protection of the quality of life for future generations. Neva Goodwin, Tufts University, US Do we owe the future anything? If so, what and why? Our capacity to affect the lives of future generations is greater than ever before, but what principles should regulate our relationship with people who don't yet exist? This Handbook offers a comprehensive survey of the key debates and pathbreaking accounts of potential ways forward both ethical and institutional. Andrew Dobson, The Open University, UK This Handbook provides a detailed overview of various issues related to intergenerational justice. Comprising articles written by a distinguished group of scholars from the international scientific community, the Handbook is divided into two main thematic sections foundations and definitions of intergenerational justice and institutionalization of intergenerational justice. The first part clarifies basic terms and traces back the origins of the idea of intergenerational justice. It also focuses on the problem of intergenerational buck-passing in the ecological context; for example in relation to nuclear waste and the greenhouse effect. At the same time, it also sheds light on the relationship between intergenerational justice and economics, addressing issues such as public debt and financial sustainability. The innovative second part of the volume highlights how posterity can be institutionally protected, such as by inserting relevant clauses into national constitutions. Reading this volume is the best way to gain an overall knowledge of intergenerational justice an extremely salient and topical issue of our time. The Handbook is an important contribution to the literature and will be of great interest to academics and graduate students as well as readers interested in wider human rights issues.

**Giving Future Generations a Voice** Alpha Edition

Young people in the Middle East (15–29 years old) constitute about one-third of the region's population. Growth rates for this age group trail only sub-Saharan Africa. This presents the region with an historic opportunity to build a lasting foundation for prosperity by harnessing the full potential of its young population.

Yet young people in the Middle East face severe economic and social exclusion due to substandard education, high unemployment, and poverty. Thus the inclusion of youth is the most critical development challenge facing the Middle East today. *A Generation in Waiting* portrays the plight of young people, urging greater investment designed to improve the lives of this critical group. It brings together perspectives from the Maghreb to the Levant. Each chapter addresses the complex challenges facing young people in many areas of their lives: access to decent education, opportunities for quality employment, availability of housing and credit, and transitioning to marriage and family formation. This volume presents policy implications and sets an agenda for economic development, creating a more hopeful future for this and future generations in the Middle East. Selected contributors include Ragui Assaad (University of Minnesota), Brahim Boudarbat (University of Montreal), Jad Chaaban (American University in Beirut), Nader Kabbani (Syria Trust for Development), Taher Kanaan (Jordan Center for Public Policy Research and Dialogue), Djavad Salehi-Isfahani (Wolfensohn Center for Development and Virginia Tech), and Edward Sayre (University of Southern Mississippi).

***Institutions For Future Generations*** Bloomsbury Publishing

This important book focuses on how newly emerging institutions for future generations can contribute to tackling large scale global environmental problems, such as threats to biodiversity and climate change. It is especially timely given the new global impetus for decarbonisation, as well as the huge growth of climate litigation and climate protest movements, often led by young people. Global environmental crises and reactions against short-term thinking have spawned new institutions aimed at giving a voice to future generations in policy-making, such as dedicated commissioners. This book looks at why we need such institutions using approaches from ethics, human rights, sustainable development, intergenerational justice and administrative law. How to design such institutions to maximise their effectiveness, operating principles for such institutions, and case studies from around the world are canvassed. A range of reform proposals are also explored, including mainstreaming future generations' voices in parliamentary processes, commissioners for future generations, human rights-based bodies and deliberative assemblies. This collection brings together philosophers, political and social scientists, lawyers and practitioners. It provides both an introduction to the field and a scholarly in-depth set of studies. It will appeal to academics, policymakers and civil society.

When making decisions, governments can and should strive consciously to balance the demands of the present with the needs of future generations. Various advocates for greater governmental foresight have created new processes or institutions within existing systems of democratic government. These include long-range planning departments, futures commissions, requirements for future-impact statements on proposed legislation, environmental protection agencies, and offices of technology assessment. But, as the contributors to this volume demonstrate, much more remains to be done. Some of the provocative questions posed by this book include: What is a public philosophy oriented to the needs of future generations necessary, and why is it necessary? What are the major examples of actual experiments in future-oriented governance? What were their successes and failures, and the reasons for each? And finally, what are the obstacles to future-oriented governance, and how might they be overcome? The authors of the essays in this volume suggest answers based on their extensive experience in working with governments, trying to help them incorporate techniques of foresight into their institutions and practices.

***Intergenerational Justice*** Edward Elgar Publishing

Economic, technological, social and environmental transformations are affecting all humanity, and decisions taken today will impact the quality of life for all future generations. This volume surveys current commitments to sustainable development, analysing innovative policies, practices and procedures to promote respect for intergenerational justice. Expert contributors provide serious scholarly and practical discussions of the theoretical, institutional, and legal considerations inherent in intergenerational justice at local, national, regional and global scales. They investigate treaty commitments related to intergenerational equity, explore

linkages between regimes, and offer insights from diverse experiences of national future generations' institutions. This volume should be read by lawyers, academics, policy-makers, business and civil society leaders interested in the economy,

society, the environment, sustainable development, climate change, and other law, policy and practices impacting all generations.
