Excerpt from A Catechism of the Steam Engine: Illustrative of the Scientific Principles Upon Which Its Operation Depends, and the Practical Details of Its Structure, in Its Application to Mines, Mills, Steam Navigation and Railways; With Various Suggestions of Improvement. - Because it is not the vacuum which exerts this pressure, but the atmosphere, which, like a head of water, presses on every thing immersed beneath it. A head of

water, however, would not press down a piston, if the water were admitted on both its sides; for an equilibrium would then be established, just as a balance retains its equilibrium though an equal Weight be added to each scale; but take the weight out of one scale, or empty the water from one side of the piston, and motion or pressure is produced; and in like manner pressure is produced on a piston by admitting steam or air upon the one side, and withdrawing the steam or air from the other side. It is not, therefore, to a vacuum, but rather to the existence of an unbalanced plenum, that the pressure made manifest by exhaustion is due, and every one knows that a vacuum of itself would not work an engine.  Excerpt from *A Catechism of the Steam*

Engine: Illustrative of the Scientific Principles Upon Which Its Operation Depends, and the Practical Details of Its Structure, in Its Application to Mines, Mills, Steam Navigation and Railways The present work is not intended as a substitute for the quarto *Treatise on the Steam Engine*, which I lately published, but is rather to be regarded as an introduction and in some measure also as a supplement to that work. Notwithstanding the existence, therefore, of the larger *Treatise*, it appeared to me that a work upon the steam engine, which in a moderate compass should give an outline of the whole subject in its practical aspect, would still be of much utility. There are no doubt many compendiums already existing which profess to accomplish this object; but I have not met with any which were calculated to satisfy even the most moderate expectations.
