Freedom of association, and the recognition of the right to bargain collectively, are not only fundamental human rights at work, but also vital elements of economic, social and political processes. Organizing for Social Justice takes account of the current trends in exercising these rights as well as the significant challenges that still remain in many parts of the world, particularly in today's global economy. The chapters are: Freedom of association and collective bargaining: The foundations for democratic development; From principles to practice: The challenges ahead; Organizing and bargaining in the global economy; Encouraging progress: Technical cooperation to strengthen and extend freedom of association and collective bargaining; Building on progress

**Management des organisations Tle STG** Hachette Education Neil Cornwell's study, while endeavouring to present an historical survey of absurdist literature and its forbears, does not aspire to being an exhaustive history of absurdism. Rather, it pauses on certain historical moments, artistic movements, literary figures and selected works, before moving on to discuss four key writers: Daniil Kharmis, Franz Kafka, Samuel Beckett and Flann O'Brien. The absurd in literature will be of compelling interest to a considerable range of students of comparative, European (including Russian and Central European) and English literatures (British Isles and American) - as well as those more concerned with theatre studies, the avant-garde and the history of ideas (including humour theory). It should also have a wide appeal to the enthusiastic general reader.

**Management des organisations Tle STMG** Springer Nature The International Astronautical Federation is the only professional society in the field of aerospace engineering and Sciences which brings together specialists of all countries interested in the exploration and peaceful exploitation of space. At its annual Congresses a large number of invited and/or carefully selected contributed papers are presented which cover a wide variety of topics and are distributed over a number of sessions, each one being organized by two leading scientists who later chair the session itself. Each year the selection of specific topics to be dealt with. is dictated either by significant new progress achieved in some sectors or by new developments and trends which are liable to influence substantially the objectives toward which space research and/or application of space technology will be oriented in the immediate future. A second rigorous screening, performed with the help of the Session Chairmen and carried out according to the same criteria identifies finally the papers which are published in the Proceedings. The outcome of all this is reliable and authoritative information as to the actual status and future trends of space activities, both from the research point of view and from the point of view of utilization and/or application.

This book seeks to establish the relevance of Albert Camus' philosophy and literature to contemporary ethics. By examining Camus' innovative methods of approaching moral problems, Whistler demonstrates that Camus' work has much to offer the world of ethics— Camus does philosophy differently, and the insights his methodologies offer could prove invaluable in both ethical theory and practice. Camus sees lived experience and emotion as ineliminable in ethics, and thus he chooses literary methods of communicating moral problems in an attempt to draw positively on these aspects of human morality. Using case studies of Camus' specific literary methods, including dialogue, myth,

mime and syntax, Whistler pinpoints the efficacy of each of Camus' attempts to flesh-out moral problems, and thus shows just how much contemporary ethics could benefit from such a diversification in method.

*Managing Competences: Research, Practice, and Contemporary Issues* draws together theoretical and practical research in competence management. It provides a wealth of knowledge concerning emerging and contemporary issues, such as the multilevel approach to competence, the development of collective competence, the strategies of competence management, and the tools for managing competences as well as the organizational dynamics of competences. Moreover, the book provides a critical approach to research and practitioners' continued engagement in competence management research and practice. Research in competence management has more recently entered an era more open to doubt and questioning: Is there a solid theoretical foundation that supports the concept of competence? What is the contribution of research on employees' competences to human resources management in particular, and more generally to management? Is there not a risk of diluting the concept of competence by considering it at the individual, collective, organizational, and strategic levels? Today, is it still possible to manage competences in a world where the boundaries of the organizations are more and more porous? These questions, and many others, probably explain why a field that seemed well-identified and well-structured yesterday, has given way today to new, highly diverse analyses of competences by researchers and practitioners. This contributed volume seeks to answer these pressing issues and is a collective means for responding to them. The book brings together multiple streams of research in the field about emerging and contemporary issues, including multidimensional HRM systems, the rise of forms of collaborative management, the intensification of the use of digital and robotic technologies, the rise of the regime of remote and networked operations, the increasing heterogeneity of the status of workers, and changes in regulations concerning work and its recognition.

It gives us great pleasure to write the preface to this book, the second in the series of monographs produced by the European Academy of Rehabilitation Medicine. No part of medicine, no clinical intervention, is complete without thinking about its effect on the person's life and the quality thereof. One of the most powerful determinants of this is work; a source not only of income, but of satisfaction and a sense of purpose and worth. The Academy, founded in 1969, is composed of senior European doctors specializing in Rehabilitation and Physical Medicine. It meets regularly to discuss matters of importance in the field, including teaching, research and ethical matters. It recognises that the ability of the speciality and of related ones to decrease dependency and increase autonomy and quality of life needs to be better known. Hence the production of these monographs. They will help readers access a vast amount of literature on the practice of rehabilitation and its effectiveness. They should be particularly useful to young doctors preparing for the European Boards certification in Physical and Rehabilitation Medicine as they are authoritative and cover subjects in depth. Topics covered in the series range from basic sciences to the most applied areas.
