Four titles from the best-selling Wonders of Creation Series are combined for a full year of study. The focus of the course delves into oceans, astronomy, weather, and mineral, all helping the student form a solid, biblical worldview. Combined with the teacher guide, you will have a detailed calendar for each week of study, reproducible worksheets, quizzes and tests, and answers keys to help grade all assignments. General Science I Course Description This is the

suggested course sequence that allows two core areas of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials within each semester are independent of one another to allow flexibility. Quarter 1: Ocean The oceans may well be Earth's final frontier. These dark and sometimes mysterious waters cover 71 percent of the surface area of the globe and have yet to be

fully explored. Under the waves, a watery world of frail splendor, foreboding creatures, vast mountains, and sights beyond imagination awaits. Now this powerful resource has been developed for three educational levels! Learning about the oceans and their hidden worlds can be exciting and rewarding — the abundance and diversity of life, the wealth of resources, the latest discoveries, and the simple mysteries that have intrigued explorers

and scientists for centuries. A better understanding of our oceans ensures careful stewardship of their grandeur and beauty for future generations, and leads to a deeper respect for the delicate balance of life on that God created on planet Earth. Quarter 2: Astronomy The universe is an amazing declaration of the glory and power of God! Beautiful and breathtaking in its scale, the vast expanse of the universe is one that we struggle to study,

understand, or even comprehend in terms of its purpose and size. Now take an incredible look at the mysteries and marvels of space in The New Astronomy Book! If you watch the stars at night, you will see how they change. This speaks to the enormity and intricacy of design in the universe. While the stars appear timeless, they instead reflect an all-powerful Creator who speaks of them in the Bible. Many ancient pagan cultures taught that the changing stars caused the

seasons to change, but unlike these pagan teachings, the Book of Job gives credit to God for both changing stars and seasons (Job 38:31-33). When Job looked at Orion, he saw about what we see today, even though he may have lived as much as 4,000 years ago. Quarter 3: Weather From the practical to the pretty amazing, this book gives essential details into understanding what weather is, how it works, and how other forces that impact on it. Learn why storm chasers and

hurricane hunters do what they do and how they are helping to solve storm connected mysteries. Discover what makes winter storms both beautiful and deadly, as well as what is behind weather phenomena like St. Elmo's Fire. Find important information on climate history and answers to the modern questions of supposed climate change. Get safety tips for preventing dangerous weather related injuries like those from lightning strikes, uncover why

thunderstorms form, as well as what we know about the mechanics of a tornado and other extreme weather examples like flash floods, hurricanes and more. A fresh and compelling look at wild and awesome examples of weather in this revised and updated book in the Wonders of Creation series! Quarter 4: Mineral Minerals are a gift of God's grace. Every day we touch them, seeing the diamond in an engagement ring or a copper chain with a cross on it. Minerals are

touched on in video games like Minecraft® and Mineral Valley™, making them more a part of our daily experience. Salt, one vital mineral, helps maintain the fluid in our blood cells and is used to transmit information in our nerves and muscles. Also, Jesus told his followers that we are the salt of the earth (Matthew 5:13), something thus needed for health and flavor. Here is a God-honoring book that reveals the first mention of minerals in the Bible, symbolic usages, their

current values in culture and society, and their mention in heaven. New Leaf Publishing Group

How to use this lesson planner This course is intended to help a student assess information about evolution and creation, and based on the information provided for each, form his or her own understanding of this issue. The author spent 30 years in a challenge to prove evolution, yet the more he learned, the more the truth of God's Word became apparent in

the evidence and interviews he found while travelling the world speaking to scholars, museum officials, and viewing artifacts. While originally designed for classroom use, this course represents substantial value and flexibility for those who choose to home educate. The content and organization of the teacher manual, means that this course can be used by more than one student at a time, or even multiple times for a single student without reusing course testing

materials. Chapter Objectives: These are presented in a way that is perfect for students to answer in a notebook - having students copy the question and then answer in the notebook is even more helpful by putting the question and answer in proximity and context. These notes in combination with the chapter tests are excellent resources for preparing for sectional tests (if given) or a final exam at the end. Chapter objective can be shared with a student or

students, and then kept in a binder for future use if needed. Students are also encouraged to keep these questions and answers for pre-test studying. Chapter Exams: For each chapter, an A, B and C test is provided in the teacher's manual. Here is how you can extend your use of this material: Option 1: You can follow the instructions in the book which are designed for one student. Or you can modify one of the following options for your student, and still have enough course materials

to use the course multiple times. Option 2: You could have up to three students taking the course at the same time, with each student having different tests if you assign each Test A to one student, Test B to another, and Test C to a third. This insures each student has a different test and educators can better assess each student's individual understanding of the material at each point. Alternate sectional and final exams are included in this manual for your convenience.

Option 3: Adjust the testing and materials to your educational program. For example, each chapter test could be used as additional worksheet material for one or more students, with only the included sectional exams to be administered. Or even just use a final exam for testing comprehension of material if you wish to assign several essays, project, or a term paper based on individual questions of your choice from the exams and objectives or based on a

chapter topic. This option would allow for additional writing and research opportunities and for some students, while engaging them more fully in comprehension and application of knowledge for this educational material. Sectional Exams: If used for a single student, a combination of “B” tests from the teacher’s manual form the basis of a sectional exam. Alternate sectional exams are included in this package to give you added flexibility in using this course per your own

educational program needs whether are teaching one or multiple students at one time, or for future use. Final Exam: “C” tests form a 190 page final exam if you are using the book per its instructions. If you are choosing one of the alternate options discussed, you will find an alternate final exam in this packet for your convenience. *General Science 1: Survey of Earth and Sky (Teacher Guide)* Simon and Schuster SAT Subject Test Biology

Introduction to
Archaeology and Geology
Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence

of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Archaeology The Archaeology Book takes you on an exciting exploration of history and ancient cultures. You will learn both the techniques of the archaeologist and the accounts of some of the richest discoveries of the Middle East that demonstrate the accuracy and historicity of the Bible. You will unearth: how archaeologists know

what life was like in the past, why broken pottery can tell more than gold or treasure can, some of the difficulties in dating ancient artifacts, how the brilliance of ancient cultures demonstrates God's creation, history of ancient cultures, including the Hittites, Babylonians, and Egyptians, the early development of the alphabet and its impact on discovery, the numerous archaeological finds that confirm biblical history, and why the Dead Sea scrolls are considered such a vital breakthrough.

Filled with vivid full-color photos, detailed drawings, and maps, you will have access to some of the greatest biblical mysteries ever uncovered. Semester 2: Geology Rocks firmly anchored to the ground and rocks floating through space fascinate us. Jewelry, houses, and roads are just some of the ways we use what has been made from geologic processes to advance civilization. Whether scrambling over a rocky beach, or gazing at spectacular meteor showers, we can't get

enough of geology! The Geology Book will teach: what really carved the Grand Canyon, how thick the Earth's crust is, why the Earth is unique for life, the varied features of the Earth's surface—from plains to peaks, how sedimentary deposition occurs through water, wind, and ice, effects of erosion, ways in which sediments become sedimentary rock, fossilization and the age of the dinosaurs, the powerful effects of volcanic activity, continental drift theory,

radioisotope and carbon dating, geologic processes of the past. Our planet is a most suitable home. Its practical benefits are also enhanced by the sheer beauty of rolling hills, solitary plains, churning seas and rivers, and majestic mountains—all set in place by processes that are relevant to today's entire population of this spinning rock we call home.

Survey of Science History & Concepts Course

Description Students will study four areas of

science: Scientific

Mathematics, Physics,

Biology, and Chemistry.

Students will gain an

appreciation for how each subject has affected our

lives, and for the people

God revealed wisdom to

as they sought to

understand Creation. Each

content area is thoroughly explored, giving students

a good foundation in each discipline. Semester 1:

Math and Physics

Numbers surround us. Just try to make it through a

day without using any. It's impossible: telephone

numbers, calendars,

volume settings, shoe

sizes, speed limits,

weights, street numbers,

microwave timers, TV

channels, and the list

goes on and on. The many

advancements and

branches of mathematics

were developed through

the centuries as people

encountered problems

and relied upon math to

solve them. It's amazing how ten simple digits can

be used in an endless

number of ways to benefit man. The development of

these ten digits and their many uses is the

fascinating story in

Exploring the World of

Mathematics. Physics is a

branch of science that

many people consider to

be too complicated to

understand. John Hudson

Tiner puts this myth to

rest as he explains the

fascinating world of

physics in a way that

students can

comprehend. Did you

know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of

the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world,

long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like

visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life—from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave

ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of

Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information. Studying and Learning in a High-Stakes World McGraw Hill Professional Accounting: Information for Business Decisions offers an integrated approach to teaching managerial and financial accounting course topics for the Introductory or Principles of Accounting course. This new text, written by an experienced author team, is designed to help students

understand how to use both managerial and financial accounting information to make decisions. Class-tested for three years across the United States, its student-friendly approach has already earned it rave reviews. The text provides an introduction to business in Chapter 1 and is the only introductory accounting book to have an entire chapter (Chapter 2) devoted to creative and critical thinking. A non-technical approach makes learning accounting accessible for

majors and non-majors, focuses students on using accounting information for decision making, and conforms with AECC guidelines for teaching accounting. A full-chapter length appendix on the accounting cycle (debits/credits) allows instructors to implement this portion of the course anywhere they desire. *Proceedings of IAC-TLEI 2016 in Budapest* Princeton Review SAT Subject Test U.S. History Prep, 3rd Edition provides students with proven strategies such as
