Umphred's Neurorehabilitation for the Physical Therapist Assistant Slack

A comprehensive guide to neurological rehabilitation for physical therapist assistants (PTAs), Umphred's Neurorehabilitation for the Physical Therapist Assistant, Third Edition presents contemporary, evidence-based principles and techniques for examination and intervention for individuals with neurological conditions.

Quick Reference Neuroscience for Rehabilitation Professionals Lippincott Williams & Wilkins

This is a Pageburst digital textbook; Including everything from basic theories to the latest breakthroughs in screening, treatments, diagnosis, and interventions, Neurological Rehabilitation, 5th Edition, is the classic neurology book for therapy students and clinicians alike. The book takes a problem-solving approach to the therapeutic management of movement limitations, quality of life, and more. With an emphasis on real-world problem solving, case studies in every chapter show the application of concepts presented. The text also details best practices put forth by the APTA and other leading physical therapy organizations. Includes all terminology, information, and practices consistent with The Guide to Physical Therapy Practice References best practices from the beginning to the end of a patients' care with information from the most evidence-based research Includes in-depth coverage with illustrations, case studies, and examples to make it easier to understand complex information Applies concepts with case studies featured in each chapter, teaching problem-solving with real world examples Covers non-conventional approaches to neurological interventions such as the movement approach, energy approach, and physical body system approaches Four new chapters highlight important topics on movement and development across the lifespan, health and wellness, documentation, and cardiopulmonary interaction, not often found in one complete resource Highlights hot button topics in physical therapy including neurological disorders and application issues such as poor vision, pelvic floor dysfunction, and pain A complete revision of the chapters provides the most current information and research

Physical Rehabilitation Lippincott Williams & Wilkins

The approach here is based on the concepts set out by Dr. Herman Kabat and taught by Margaret Knott, and this second edition adds many new illustrations including demonstrations of the techniques and pictures of actual patient treatment. The gait section has been expanded with an introduction to normal components and photos of patient treatment. The mat section has also been enlarged and includes illustrations of patient treatment.

"As the role of the Physical Therapist Assistant (PTA) expands in the area of intervention approaches for neurological rehabilitation, the Third Edition of Neurorehabilitation for the Physical Therapist Assistant offers a timely update to reflect these emerging changes. Inside Neurorehabilitation for the Physical Therapist Assistant, Second Edition Dr. Darcy Umphred and Dr. Rolando Lazaro include a more comprehensive explanation and discussion of intervention techniques used in both pediatric and adult patient/client populations. Also included is a more thorough discussion of examination tools and their application because of the growing need for the PTA to identify the progress of the intervention using the tools from the initial examination and to assist in completing the discharge examination. Faculty will welcome the new and expanded instructor's materials for the classroom that include an online video library illustrating selected examination tools and intervention approaches. In this Second Edition, there are several video clips with Dr. Umphred demonstrating several clinical techniques that can enhance PTA practice. Additionally, an expanded study guide that provides case studies and Q&A for each chapter can be found on www.efacultylounge.com Neurorehabilitation for the Physical Therapist Assistant, Second Edition now includes a new chapter on documentation to help the PTA develop the skills necessary for clear record keeping as well as ensuring optimal patient care and reimbursement for services provided. Features: A clear delineation of the differences between the frameworks used by medical practitioners, those used by the PT, and those directly related to the PTA Detailed descriptions of interventions, tests, and measures used by the PTA Access to a website that includes an online video library and case studies and questions for each chapter, with new book purchase. A focus on interactions between types of movement dysfunctions and intervention selection Neurorehabilitation for the Physical Therapist Assistant, Second Edition is the perfect resource for any physical therapist assistant faculty, student, or clinician interested in the physical therapy management of individuals with various types of neurological conditions"--

The second edition of this introductory text uses clinical examples to bridge the gap between basic neuroscience and the practice of neurologic rehabilitation. Each chapter illustrates the relationship between the nervous system and behavior. Current, portable, and clearly written, the text covers discrete systems for acquiring information, the neural mechanisms that control specific kinds of human function, and how the nervous system responds to insult and injury. New in this edition: Neurotransmitters, support structures and blood supply, sensorimotor interaction, and aging of the nervous system.

Neurorehabilitation for the Physical Therapist Assistant provides a complete overview of the foundations of various neurological medical conditions and presents a wide array of clinical problems that a physical therapist assistant may encounter in the educational or clinical setting. Darcy Umphred and Connie Carlson, along with 11 contributors, offer a thorough explanation of the PT to

PTA delegation process that is both unique and comprehensive. Throughout the pages of Neurorehabilitation for the Physical Therapist Assistant the PTA is provided with the necessary tools to effectively interact with and treat patients who suffer from neurological medical diagnoses. This text also covers a wide variety of neurological clinical problems that a PTA may encounter. Neurorehabilitation for the Physical Therapist Assistant presents specific examples of tests and measures and interventions that a PTA may use when treating patients with CNS damage. Multiple chapters offer one or more case studies that will aid students and practicing PTAs in the analysis of PTA roles and the delegation of specific tasks, as well as why a PT may not choose to delegate a task. Also included is a brief discussion of selected pathologies and their progressions or complications, which gives the PTA a means to identify contraindications or changes in patient behavior that need to be reported. Features: -Interactive website access that provides the answers to the questions and case studies for each chapter. -A clear delineation of the differences between the frameworks used by medical practitioners and those used by the PT. -Detailed descriptions of tests and measures and interventions used by the PTA. -A focus on interactions between types of movement dysfunctions and intervention selection. -A discussion of disablement and enablement models. The volumes of knowledge presented in this unique and detailed text ensures Neurorehabilitation for the Physical Therapist Assistant will accompany the PTA throughout their education and into their career.

Using a problem-solving approach based on clinical evidence, Neurological Rehabilitation, 6th Edition covers the therapeutic management of people with functional movement limitations and quality of life issues following a neurological event. It reviews basic theory and covers the latest screening and diagnostic tests, new treatments, and interventions commonly used in today's clinical practice. This edition includes the latest advances in neuroscience, adding new chapters on neuroimaging and clinical tools such as virtual reality, robotics, and gaming. Written by respected clinician and physical therapy expert Darcy Umphred, this classic neurology text provides problem-solving strategies that are key to individualized, effective care. UNIQUE! Emerging topics are covered in detail, including chapters such as Movement Development Across the Lifespan, Health and Wellness: The Beginning of the Paradigm, Documentation, and Cardiopulmonary Interactions. UNIQUE! A section on neurological problems accompanying specific system problems includes hot topics such as poor vision, pelvic floor dysfunction, and pain. A problem-solving approach helps you apply your knowledge to examinations, evaluations, prognoses, and intervention strategies. Evidence-based research sets up best practices, covering topics such as the theory of neurologic rehabilitation, screening and diagnostic tests, treatments and interventions, and the patient's psychosocial concerns Information. Case studies use real-world examples to promote problem-solving skills. Non-traditional approaches to neurological interventions in the Alternative and Complementary Therapies chapter include the movement approach, energy approach, and physical body system approaches therapies. Terminology adheres to the best practices of the APTA as well as other leading physical therapy organizations, following The Guide to Physical Therapy Practice, the Nagi model, and the ICF World Health Model of patient empowerment. Updated illustrations provide current visual references. NEW chapters on imaging and robotics have been added. Updated chapters incorporate the latest advances and the newest information in neuroscience and intervention strategies. Studyguide for Neurological Rehabilitation by Umphred, Darcy Ann, ISBN 9780323075862 Elsevier Health Sciences

Master the role of the physical therapist or physical therapist assistant in neurologic rehabilitation! Neurologic Interventions for Physical Therapy, 3rd Edition helps you develop skills in the treatment interventions needed to improve the function of patients with neurologic deficits. It provides a solid foundation in neuroanatomy, motor control, and motor development, and offers clear, how-to guidelines to rehabilitation procedures. Case studies help you follow best practices for the treatment of children and adults with neuromuscular impairments caused by events such as spinal cord injuries, cerebral palsy, and traumatic brain injuries. Written by physical therapy experts Suzanne 'Tink' Martin and Mary Kessler, this market-leading text will help you prepare for the neurological portion of the PTA certification exam and begin a successful career in physical therapy practice. Comprehensive coverage of neurologic rehabilitation explores concepts in neuroanatomy, motor control and motor learning, motor development, and evidence-based treatment of adults and children with neuromuscular impairments. Over 700 photos and drawings clarify concepts, show anatomy, physiology, evaluation, and pathology, and depict the most current rehabilitation procedures and technology. Case studies demonstrate the patient examination and treatment process, and show how to achieve consistency in documentation. Proprioceptive Neuromuscular Facilitation chapter describes how PNF can be used to improve a patient's performance of functional tasks by increasing strength, flexibility, and range of motion - key to the treatment of individuals post stroke. Review questions are included at the end of each chapter, with answers at the back of the book. Illustrated step-by-step intervention boxes, tables, and charts highlight important information, and make it easy to find instructions quickly. Use of language of the APTA Guide to Physical Therapist Practice ensures that you understand and comply with best practices recommended by the APTA. NEW photographs of interventions and equipment reflect the most current rehabilitation procedures and technology. UPDATED study resources on the Evolve companion website include an intervention collection, study tips, and additional review questions and interactive case studies.

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to

performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.
