The introduction and tracking of reference to people or individuals, known as referential movement, is a central feature of coherence, and accounts for “about every third word of discourse”. Located at the intersection of pragmatics and grammar, reference is now proving a rich and enduring source of insight into second language development. The challenge for second language (L2) learners involves navigating the selection and positioning of reference in the target language, continually shifting and balancing the referential means used to maintain coherence, while remaining acutely sensitive to the discourse and social context. The present volume focuses on how L2 learners meet that challenge, bringing together both eminent and up-and-coming researchers in the field of L2 acquisition. The chapters address a range of problems in second language acquisition (SLA) (e.g., form-function mapping, first language [L1] influence, developmental trajectories), and do so in relation to various theoretical approaches to reference (e.g., Accessibility Theory, Givenness Hierarchy). The global outlook of these studies relates to the L2 acquisition of English, French, Japanese, Korean, and Spanish and covers a diverse range of situational contexts including heritage language learning, English as a medium of instruction, and the development of sociolinguistic competence.

In 2004, Kentaro Toyama, an award-winning computer scientist, moved to India to start a new research group for Microsoft. Its mission: to explore novel technological solutions to the world's persistent social problems. Together with his team, he invented electronic devices for under-resourced urban schools and developed digital platforms for remote agrarian communities. But after a decade of designing technologies for humanitarian causes, Toyama concluded that no technology, however dazzling, could cause social change on its own. Technologists and policy-makers love to boast about modern innovation, and in their excitement, they exuberantly tout technology's boon to society. But what have our gadgets actually accomplished? Over the last four decades, America saw an explosion of new technologies - from the Internet to the iPhone, from Google to Facebook - but in that same period, the rate of poverty stagnated at a stubborn 13%, only to rise in the recent recession. So, a golden age of innovation in the world's most advanced country did nothing for our most prominent social ill. Toyama's warning resounds: Don't believe the hype! Technology is never the main driver of social progress. Geek Heresy inoculates us against the glib rhetoric of tech utopians by revealing that technology is only an amplifier of

human conditions. By telling the moving stories of extraordinary people like Patrick Awuah, a Microsoft millionaire who left his lucrative engineering job to open Ghana's first liberal arts university, and Tara Sreenivasa, a graduate of a remarkable South Indian school that takes children from dollar-a-day families into the high-tech offices of Goldman Sachs and Mercedes-Benz, Toyama shows that even in a world steeped in technology, social challenges are best met with deeply social solutions.

Based on Dharma talks by Zen Master Thich Nhat Hanh and insights from participants in retreats for healing the inner child, this book is an exciting contribution to the growing trend of using Buddhist practices to encourage mental health and wellness. Reconciliation focuses on the theme of mindful awareness of our emotions and healing our relationships, as well as meditations and exercises to acknowledge and transform the hurt that many of us experienced as children. The book shows how anger, sadness, and fear can become joy and tranquility by learning to breathe with, explore, meditate, and speak about our strong emotions. Reconciliation offers specific practices designed to bring healing and release for people suffering from childhood trauma. The book is written for a wide audience and accessible to people of all backgrounds and spiritual traditions.
