 Basic Science and Systemic Disease, Part 3 of The Netter Collection of Medical Illustrations: Musculoskeletal System, 2nd Edition, provides a highly visual guide to this body system, from foundational basic science and anatomy to orthopaedics and rheumatology. This spectacularly illustrated volume in the masterwork known as the (CIBA) "Green Books" has been expanded and revised by Dr. Joseph Iannotti, Dr. Richard Parker, and other experts from the Cleveland Clinic to mirror the many exciting advances in musculoskeletal medicine and imaging - offering rich insights into embryology; physiology; metabolic disorders; congenital and development disorders; rheumatic diseases; tumors of musculoskeletal system; injury to musculoskeletal system; soft tissue infections; and fracture complications. Get complete, integrated visual guidance on the musculoskeletal system with thorough, richly illustrated coverage. Quickly understand complex topics thanks to a concise text-atlas format that provides a context bridge between primary and specialized medicine. Clearly visualize how core concepts of anatomy, physiology, and other basic sciences correlate across disciplines. Benefit from matchless Netter illustrations that offer precision, clarity, detail and realism as they provide a visual approach to the clinical presentation and care of the patient. Gain a rich clinical view of embryology; physiology; metabolic disorders; congenital and development disorders; rheumatic diseases; tumors of musculoskeletal system; injury to musculoskeletal system; soft tissue infections; and fracture complications in one comprehensive volume, conveyed through beautiful illustrations as well as up-to-date radiologic and laparoscopic images. Benefit from the expertise of Drs. Joseph Iannotti, Richard Parker, and esteemed colleagues from the Cleveland Clinic, who clarify and expand on the illustrated concepts. Clearly see the connection between basic science and clinical practice with an integrated overview of normal structure and function as it relates to pathologic conditions. See current clinical concepts in orthopaedics and rheumatology captured in classic Netter illustrations, as well as new illustrations created specifically for this volume by artist-physician Carlos Machado, MD, and others working in the Netter style.

To meet growing demand, the FAO has estimated that world poultry production needs to grow by 2-3% per year to 2030. Much of the increase in output already achieved has been as a result of improvements in commercial breeds combined with rearing in more intensive production systems. However, more intensive systems and complex supply chains have increased the risk of rapid transmission of animal diseases and zoonoses. Consumer expectations of sensory and nutritional quality have never been higher. At the same time consumers are more concerned about the environmental impact of poultry production as well as animal welfare. Drawing on an international range of expertise, this book reviews research on safety, quality and sustainability issues in poultry production. Part 1 discusses risks from pathogens, detection and safety management on farms and in slaughterhouse operations. Part 2 looks at ways of enhancing the flavour, colour, texture and nutritional quality of poultry meat. Finally, the book reviews the environmental impact of poultry

production. Achieving sustainable production of poultry meat Volume 1: Safety, quality and sustainability will be a standard reference for poultry and food scientists in universities, government and other research centres and companies involved in poultry production. It is accompanied by two further volumes which review poultry breeding, nutrition, health and welfare.

Audio Mastering: The Artists collects more than twenty interviews, drawn from more than 60 hours of discussions, with many of the world's leading mastering engineers. In these exclusive and often intimate interviews, engineers consider the audio mastering process as they, themselves, experience and shape it as the leading artists in their field. Each interview covers how engineers got started in the recording industry, what prompted them to pursue mastering, how they learned about the process, which tools and techniques they routinely use when they work, and a host of other particulars of their crafts. We also spoke with mix engineers, and craftsmen responsible for some of the more iconic mastering tools now on the market, to gain a broader perspective on their work. This book is the first to provide such a comprehensive overview of the audio mastering process told from the point-of-view of the artists who engage in it. In so doing, it pulls the curtain back on a crucial, but seldom heard from, agency in record production at large.

*The Complete Book of Colleges 2021 Gulf Professional Publishing* Using the basic economic principle of making decisions using a cost-benefit framework—and how changes in one or the other can result in a different decision—this book uncovers how various groups responded to incentives provided by the Prohibition legislation. Using this calculus, it is clear that even criminals are rational characters, responding to incentives and opportunities provided by the 18th Amendment and the Volstead Act. The book begins with a broad look at the adaptations of the law's targets: the wine, beer, and liquor industries. It then turns to specific people (Violators, Line Tip-Toers, Enablers, and Hypocrites), sharing their stories of economic adaptation to bring economic lessons to life. Due to its structure, the book can be read in parts or as a whole and is suitable for short classroom reading assignments or individual pleasure reading.

Few areas of biomedical research provide greater opportunities to capitalize upon the revolution in genomics and molecular biology than gene therapy. This is particularly true for the brain and nervous system, where gene transfer has become a key technology for basic research and has recently been translated to human therapy in several landmark clinical trials. Gene Therapy in the Brain: From Bench to Bedside represents the definitive volume on this subject. Edited by two pioneers of neurological gene therapy, this volume contains contributions by leaders who helped to create the field as well as those who are expanding the promise of gene therapy for the future of basic and clinical neuroscience. Drawing upon this extensive collective experience, this book provides clear and informative reviews on a variety of subjects which would be of interest to anyone who is currently using or contemplating exploring gene therapy for neurobiological applications. Basic gene transfer technologies are discussed, with particular emphases upon novel vehicles, immunological issues and the role of gene therapy in stem cells. Numerous research applications are reviewed, particularly in complex fields such as behavioral neurobiology. Several preclinical areas are also covered which are likely to translate into clinical studies in the near future, including epilepsy, pain and amyotrophic lateral sclerosis. Among the most exciting advances in recent years has been the use of neurological gene therapy in human clinical trials, including Parkinson's disease, Canavan disease and Batten disease. Finally, readers will find "insider" information on technological and regulatory issues which can often limit effective translation of even the most promising idea into clinical use. This work provides up-to-date information and key insights into those gene therapy issues which are important to both scientists and clinicians focusing upon the brain and central nervous system.

"Men are divided into three classes. There are men who love their liquor, men who sell liquor, and politicians who are on both sides of the question." Before Prohibition, a number of liquor merchants operated in the District of Columbia. This was a time when intoxicating beverages were at the forefront of the national conversation and the District, being subject only to laws passed by Congress, served as a testing ground for regulation. Karen Spärck Jones is one of the major figures of 20th century and early 21st Century computing and information processing. Her ideas have had an important influence on the development of Internet Search Engines. Her contribution has been recognized by awards from the natural language processing, information retrieval and artificial intelligence communities, including being asked to present the prestigious Grace Hopper lecture. She continues to be an active and influential researcher. Her contribution to the scientific evaluation of the effectiveness of such computer systems has been quite outstanding. This book celebrates the life and work of Karen Spärck Jones in her

seventieth year. It consists of fifteen new and original chapters written by leading international authorities reviewing the state of the art and her influence in the areas in which Karen Spärck Jones has been active. Although she has a publication record which goes back over forty years, it is clear even the very early work reviewed in the book can be read with profit by those working on recent developments in information processing like bioinformatics and the semantic web.

One of the first women's organizations to "mask" in a Mardi Gras parade, the "Million Dollar Baby Dolls" redefined the New Orleans carnival tradition. Tracing their origins from Storyville brothels and dance halls to their re-emergence in post-Katrina New Orleans, author Kim Vaz uncovers the fascinating history of the "raddy-walking, shake-dancing, cigar-smoking, money-flinging" ladies that strutted their way into a predominantly male establishment. The Baby Dolls formed around 1912 as an organization for African American women who used their profits from working in New Orleans's red-light district to compete with other black women in their profession on Mardi Gras. Part of this competition involved the tradition of masking in which carnival groups create a collective identity through costuming. Their baby doll costumes—short satin dresses, stockings with garters, and bonnets—set against their bold and provocative public behavior not only exploited stereotypes but also empowered and made visible an otherwise marginalized demographic of women. In addition to their subversive presence at Mardi Gras, the Baby Dolls helped shape the sound of jazz in the city. The Baby Dolls often worked in and patronized dance halls and honky-tonks, where they introduced new dance steps and challenged house musicians to keep up the beat. The entrepreneurial Baby Dolls also sponsored dances with live jazz bands, effectively underwriting the advancement of an art form now inseparable from New Orleans's identity. Over time, the Baby Doll's members diverged as different neighborhoods adopted the tradition. Groups such as the Golden Slipper Club, the Gold Diggers, the Rosebud Social and Pleasure Club, and the Satin Sinners stirred the creative imagination of middle-class Black women and men across New Orleans, from the downtown Tremé area to the uptown community of Mahalia Jackson. Vaz follows the Baby Doll phenomenon through one hundred years of photos, articles, and interviews to conclude with the birth of contemporary groups such as the modern day Antoinette K-Doe's Ernie K-Doe Baby Dolls, the New Orleans Society of Dance's Baby Doll Ladies, and the Tremé Million Dollar Baby Dolls. Her book celebrates these organizations' crucial contribution to Louisiana's cultural history.
