This book provides novel concepts and techniques for air traffic management (ATM) and communications, navigation, and surveillance (CNS) systems. The book consists of selected papers from the 6th ENRI International Workshop on ATM/CNS (EIWAC2019) held in Tokyo in October 2019, the theme of which was "Exploring Ideas for World Aviation Challenges". Included are key topics to realize safer and more efficient skies in the future, linked to the integrated conference theme consisting of long-term visions based on

presentations from various fields. The book is dedicated not only to researchers, academicians, and university students, but also to engineers in the industry, air navigation service providers (ANSPs), and regulators of aviation.

NSC 68 and the Political Economy of the Early Cold War re-examines the origins and implementation of NSC 68, the massive rearmament program that the United States embarked upon beginning in the summer of 1950. Curt Cardwell

reinterprets the origins of NSC 68 to demonstrate that the aim of the program was less about containing communism than ensuring the survival of the nascent postwar global economy, upon which rested postwar US prosperity. The book challenges most studies on NSC 68 as a document of geostrategy and argues instead that it is more correctly understood as a document rooted in concerns for the US domestic political economy.

This accessible, narrative account follows Indian history over its 9,000 year trajectory, from the ancient Harappans to today, emphasizing events and issues of the 20th and 21st centuries. Written for

high school students and general readers who have little background on the world's largest democracy, this second edition of a popular work provides an objective overview of Indian history with a particular focus on the modern nation.

Approximately half of the book deals with developments since the beginning of the 20th century, with new chapters covering events and issues that made news between 2002 and 2014. Readers can learn about the Bollywood craze, 21st-century economic growth, and concerns about the safety and equality of women today, as well as about such traditional topics as Buddhism and Hinduism, the Mughal Dynasty, and the British East India Company. Caste politics and the establishment of the Republic of India are covered, as is the life of Mahatma Gandhi. Completely revised and expanded, the second edition features fresh content throughout and includes photographs that were not in the earlier volume. The Notable Figures section, Appendix of Leaders, timeline, and glossary are also updated, and the bibliography now features electronic resources for students. *A Moderate Compromise* Routledge

Looking at all sides of the globalization debate, Suranovic analyzes how international economic policy is made and how it has become so controversial. He offers a solution to the debate between free trade/unregulated markets and the push for greater government involvement that is consistent with both economic efficiency and social justice.

Noted biologist and author John Tyler Bonner has experimented with cellular slime molds for more than sixty years, and he has done more than anyone else to raise these peculiar collections of amoebae from a minor biological curiosity to a major model organism--one that is widely studied for clues to the development and evolution of all living things. Now, five decades after he published his first pioneering book on cellular slime molds, Bonner steps back from the proliferating and increasingly specialized knowledge about the organism

to provide a broad, nontechnical picture of its whole biology, including its evolution, sociobiology, ecology, behavior, and development. The Social Amoebae draws the big lessons from decades of research, and shows how slime molds fit into and illuminate biology as a whole. Slime molds are very different from other organisms; they feed as individual amoebae before coming together to form a multicellular organism that has a remarkable ability to move and orient itself in its environment. Furthermore, these social amoebae display a sophisticated division of labor; within each organism, some cells form the stalk and others become the spores that will seed the next generation. In *The Social Amoebae*, Bonner examines all these parts together, giving a balanced, concise, and clear overview of slime mold biology, from molecules to cells to multicells, as he advances some unconventional and unexpected insights.

In March 1993, Secretary of Defense Aspin initiated a comprehensive review of the nation's defense strategy, force structure, modernization, infrastructure, and

foundations. He felt that a department-wide review needed to be conducted "from the bottom up" because of the dramatic changes that have occurred in the world as a result of the end of the Cold War and the dissolution of the Soviet Union. These changes in the international security environment have fundamentally altered America's security needs. Thus, the underlying premise of the Bottom-Up Review was that we needed to reassess all of our defense concepts, plans, and programs from the ground up. This final report on the Bottom-Up Review provides the results of that unprecedented and collaborative effort. It represents the product of hundreds of individuals' labor and dedication. It describes the extensive analysis that went into the review and the recommendations and decisions that emerged.

Presenting a comprehensive view of the field, this award-winning overview of educational technology discusses such topics as instructional design and systems, computer applications in education and training, research and evaluation in instructional technology, future prospects for instructional technology, and professional development. The only book to present a comprehensive view of the field, this award-winning overview of educational technology has been updated to cover current issues and trends. Contributors discuss instructional design and systems, computer applications in education and training, research and evaluation in instructional technology, future prospects for instructional technology, and professional development. New to this edition are chapters that address such current topics as educational and instructional systems development, post-modernism and

instructional technology, interactive technologies, the Internet and higher education, qualitative research, and instructional technology and attitude change.

Threatened on all sides by relentless enemies for a thousand years, the Byzantines needed ready armies and secure borders. To this end, experienced commanders compiled practical handbooks of military strategy. Three such manuals are presented here. The Anonymous Byzantine Treatise on Strategy was written by a retired combat engineer around the middle of the sixth century, while Skirmishing and Campaign Organization and Tactics date from the late tenth century and concern warfare in the mountains along the Syrian frontier and campaigns in the rugged terrain of the Balkans. These treatises provide information not only on tactics and weaponry but also on the motivations of the men who risked their lives to defend the empire.

The process of froth flotation is an outstanding example of applied surface chemistry. It is extensively used in the mining, mineral, metallurgical, and chemical industries for separation and selective concentration of individual minerals and other solids. Substances so concentrated serve as raw materials for producing appropriate metals and chemicals. The importance of flotation in technology is chiefly due to the ease with which it can be made selective and versatile and to the economy of the process. The objective of this book is to review the fundamentals of surface chemistry together with the relevant aspects of organic and inorganic chemistry that-in the opinion of the author-are important ~ control of the froth flotation process. The review updates the information that had been available in books by Sutherland and Wark (1955), Gaudin (1957), Klassen and Mokrousov (1963), and Glembotsky et al. (1963). It emphasizes mainly the surface chemical aspects of the process, leaving other relevant topics such as hydrodynamics,

mechanical and electrical technology, circuit design and engineering, operations research, instrumentation technology, modeling, etc., to appropriate specialized treatments.

Complete Atlas of the World, 3rd Edition is now fully revised and updated to reflect the latest changes in world geography, including the annexation of Crimea and the new nation of South Sudan. Bringing each featured landscape to life with detailed terrain models and color schemes and offering maps of unsurpassed quality, this atlas features four sections: a world overview, the main atlas, fact files on all the countries of the world, and an easy-to-reference index of all 100,000 place names. All maps enjoy a full double-page spread, with continents broken down into 330 carefully selected maps, including 100 city plans. You will also find a stimulating series of global thematic maps that explore Earth's place in the universe, its physical forms and processes, the living world, and the human condition. From Antarctica to Zambia, discover the Earth continent-by-continent with Complete Atlas of the World, 3rd Edition.

In the present text the author deals with both conventional and new approaches to trade theory and policy, treating all

important research topics in international economics and clarifying their mathematical intricacies. The textbook is intended for undergraduates, graduates and researchers alike. It addresses undergraduate students with extremely clear language and illustrations, making even the most complex trade models accessible. In the appendices, graduate students and researchers will find self-contained treatments in mathematical terms. The new edition has been thoroughly revised and updated to reflect the latest research on international trade.

MEMs Materials and Processes Handbook" is a comprehensive reference for researchers searching for new materials, properties of known materials, or specific processes available for MEMS fabrication. The content is separated into distinct sections on "Materials" and "Processes". The extensive Material Selection Guide" and a "Material Database" guides the reader through the selection of appropriate materials for the required task at hand. The "Processes" section of the book is organized as a catalog of various microfabrication processes, each with a brief introduction to the technology, as well as examples of common uses in MEMs.
