A workshop on Singularities, Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year-long symposium on Singularity Theory and its applications. The proceedings fall into two halves: Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory, bifurcation theory, and applications in the sciences. The papers are original research, stimulated by the symposium and workshops: All have been refereed, and none will appear elsewhere. The main topic, deformation theory, is represented by several papers on descriptions of the bases of versal deformations, and several more on descriptions of the generic fibres. Other topics include stratifications, and applications to differential geometry.

La proliferación actual de sistemas concurrentes, en general debido al abaratamiento sustancial de poderosos sistemas de cómputo, y el auge, cada vez mayor, que toman las aplicaciones distribuidas, hace que cada vez sea más interesante el estudio de los sistemas concurrentes en todos los aspectos de la Informática. La mayor complejidad y tamaño de los secuenciales

convencionales exige el uso de técnicas adecuadas tanto para su diseño y análisis, como para su posterior implementación práctica. Este libro contiene las comunicaciones que han sido presentadas en la Octava edición de las Jornadas de Concurrencia, celebradas en Cuenca en junio de 2000. Este es un foro para el intercambio de experiencias entre los investigadores nacionales tanto de la Universidad como de la Industria en el campo de los sistemas concurrentes, y por tanto en él se muestran tanto los resultados teóricos como las aplicaciones industriales más recientes en esta materia.

The French explorer, surveyor, cartographer, and diplomat Samuel de Champlain (c. 1575-1635) is often called the Father of New France for founding the settlement that became Quebec City, governing New France, and mapping much of the St. Lawrence and eastern Great Lakes region. Champlain was also a prolific writer who documented his experiences in the Americas, including his travels, impressions of the New World, and encounters and alliances with native peoples. Samuel de Champlain before 1604 is the definitive edition of the early documents by or about Champlain, correcting numerous errors contained in previous publications. Providing the documents in both English translation and the original French or Spanish, this meticulous, fastidiously researched work includes a comprehensive introduction that provides biographical

information, details about Champlain's early career as aide to the quartermaster of Henri IV's army in Brittany and his connections at court, The military and political context underlying French imperialism, And The royal policies that allowed trade and colonization in the Americas. This stunning scholarly achievement will set the historical record straight and be an invaluable resource for decades to come.

Dieser Ratgeber will Freude am Lernen vermitteln, Lernen als Luxus und als großes Privileg rüberbringen und allen, die sich bereits fürs Lernen interessieren, noch nützliche Anregungen geben. Es beschäftigt sich sowohl mit Sprachenlernen als auch mit Allgemeinbildung in Form von Schulbildung. Das Büchlein ist beabsichtigt, mitreißend zu sein und Freude zu teilen, aber auch Trost zu spenden, wenn es nicht so klappt. Eben diesen Trost verdiene ich selber, die ich durch die Tatsache, mein schlaues Hobby nicht vor den Leuten geheim zu halten, in die Verlegenheit gekommen bin, einen Stempel als geistig Behinderte aufgedrückt zu bekommen. Este libro pretende ser una introducción accesible al tema de la evaluación de impacto y a cómo aplicarla al ámbito del desarrollo. Este tipo de evaluaciones sirve para determinar si un programa ha logrado o no los resultados previstos, y para explorar si existen estrategias alternativas con las que alcanzar mejor dichos resultados. El manual, que ofrece una introducción no técnica al tema, está estructurado en tres partes: en la primera se explica qué significa evaluar el impacto de los programas de desarrollo y por qué es importante; la segunda parte se centra en cómo evaluar; en la tercera parte se aborda la cuestión de cómo

implementar una evaluación. Estos elementos constituyen los elementos básicos necesarios para llevar a cabo una evaluación de impacto. La intención es aproximarse al tema principalmente a partir de la intuición, por lo que se ha minimizado la terminología técnica. Se ofrece al lector una serie de herramientas básicas de evaluación (los conceptos y los métodos fundamentales) y se analiza su aplicación a programas de desarrollo del mundo real.

Seminaire de Probabilites XXXIII Infinite Study

As usual, some of the contributions to this 44th Séminaire de Probabilités were presented during the Journées de Probabilités held in Dijon in June 2010. The remainder were spontaneous submissions or were solicited by the editors. The traditional and historical themes of the Séminaire are covered, such as stochastic calculus, local times and excursions, and martingales. Some subjects already touched on in the previous volumes are still here: free probability, rough paths, limit theorems for general processes (here fractional Brownian motion and polymers), and large deviations. Lastly, this volume explores new topics, including variable length Markov chains and peacocks. We hope that the whole volume is a good sample of the main streams of current research on probability and stochastic processes, in particular those active in France.

This book, first published in 1969, explores two chap-books from Spain. Mr Norton and Professor Wilson provide a substantial introduction on their literary or bibliographical importance, and a supplementary checklist of Spanish chap-books before 1521. Students of folk-literature will find this interesting.

This book presents techniques for determining uncertainties in numerical solutions with applications in the fields of business administration, civil engineering, and economics, using Excel as a computational tool. Also included are solutions to uncertainty problems involving stochastic methods. The list of topics specially covered in this volume includes linear and nonlinear programming, Lagrange multipliers (for sensitivity), multi objective optimization, and Game Theory, as well as linear algebraic equations, and probability and statistics. The book also provides a selection of numerical methods developed for Excel, in order to enhance readers' understanding. As such, it offers a

valuable guide for all graduate and undergraduate students in the fields of economics, business administration, civil engineering, and others that rely on Excel as a research tool.

Besides topics traditionally found in the Séminaire de Probabilités (Martingale Theory, Stochastic Processes, questions of general interest in Probability Theory), this volume XXXIII presents nine contributions to the study of filtrations up to isomorphism. It also contains three graduate courses: Dynamics of stochastic algorithms, by M. Benaim; Simulated annealing algorithms and Markov chains with rare transitions, by O. Catoni; and Concentration of measure and logarithmic Sobolev inequalities, by M. Ledoux. These up to date courses present the state of the art in three matters of interest to students in theoretical or applied Probability Theory, and to researchers as well.

Let p be a prime, G a finite Kp -group S a Sylow p -subgroup of G and Q a large subgroup of G in S (i.e., $CG(Q) \leq Q$ and $NG(U) \leq NG(Q)$ for $1 \neq U \leq CG(Q)$). Let L be any subgroup of G with $S \leq L$, $Op(L) \neq 1$ and $Q \not\leq L$. In this paper the authors determine the action of L on the largest elementary abelian normal p -reduced p -subgroup YL of L .

There are simple and funny Spanish texts for easy reading. The book consists of Beginner and Elementary courses with parallel Spanish-English texts. The author maintains learners' motivation by funny stories about real life situations such as meeting people, studying, job searches, working etc. The ALARM Method (Approved Learning Automatic Remembering Method) utilize natural human ability to remember words used in texts

repeatedly and systematically. The author managed to compose each sentence using only words explained in previous chapters. The second and the following chapters of the Beginner course have only about thirty new words each. The book is equipped with the audio tracks. The address of the home page of the book on the Internet, where audio files are available for listening and downloading, is listed at the beginning of the book on the copyright page.
