Developed in the early 70s in Japan, the Kansei Engineering (KE) method gives you the tools to develop profitable and well-received products and services. Written by the founder of KE, Mitsuo Nagamachi, and co-authored by one of his proteges, Anitawati Mohd Lokman, Kansei Innovation: Practical Design Applications for Product and Service Development shows you how to nurture Kansei, develop the skill in observing people, and apply that skill to the development and design of products. In this book, Nagamachi shares his 50 years of experiences in enterprise guidance and product development, including examples of exceptional service innovation at companies such as Nissan Motor, Mazda, Toyota, Volvo, Fuji Heavy Industries, Mitsubishi Electric, Tenmaya Department Stores, Seibu Department Stores, Suntory, NEC, Sharp, Komatsu, Wacoal Corporation, Matsushita Electric Works (now Panasonic Electric Works), Boeing, and many more. These stories may surprise you when you learn about the new development of certain products that you already use. The book includes coverage of ergonomic and KE methods for studying human Kansei in product development and job improvement as well as discussion of how to use these methods for innovation in work improvement and activate KE for product development. It gives you a reliable instrument for predicting the reception of a product on the market before the development costs become too large. And, in the end, you will understand how Kansei—a seemingly dubious presence—is processed scientifically and able to have multilateral applications.

"A good read for anyone who wants to understand what actually determines whether a developing economy will succeed." —Bill Gates, "Top 5 Books of the Year" An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who the Financial Times said "should be named chief myth-buster for Asian business." In How Asia Works, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell's in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need "export discipline," a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for

fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron's stifling of reform to the explosive growth at a Korean steel mill. "Provocative . . . How Asia Works is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic." —The Economist

This book on hybrid electric vehicles brings out six chapters on some of the research activities through the wide range of current issues on hybrid electric vehicles. The first section deals with two interesting applications of HEVs, namely, urban buses and heavy duty working machines. The second one groups papers related to the optimization of the electricity flows in a hybrid electric vehicle, starting from the optimization of recharge in PHEVs through advance storage systems, new motor technologies, and integrated starter-alternator technologies. A comprehensive analysis of the technologies used in HEVs is beyond the aim of the book. However, the content of this volume can be useful to scientists and students to broaden their knowledge of technologies and application of hybrid electric vehicles.

A new and incisive analysis of the political viability of human rights, with an in-depth investigation of its largest violation: world hunger. Gonzalez-Pelaez develops John Vincent's theory of basic human rights within the context of the international political economy and demonstrates how the right to food has become an international norm enshrined within international law. She then assesses the international normative and practical dimensions of hunger in connection with international trade and poverty. Using the society of states as the framework of analysis, she explores the potential that the current system has to correct its own anomalies, and examines the measures that can move the hunger agenda forward in order to break through its current stagnation.

In 1947 Vaino J. Holopainen (Waino) and Roy E. Handy Jr. of the small town of Hubbardston, Massachusetts developed the world's first backhoe. This revolutionary invention that could dig and load by swinging side to side, was also the world's first all hydraulically actuated and controlled machine for digging. Vaino and Roy then formed Wain-Roy Corporation. Their grassroots contribution to the earth moving industry led to the development of twenty-six major backhoe related break-through designs, including the tractor loader backhoe, which formed the worldwide multi-billion-dollar industry that we know today. The amazing story of Wain-Roy and the invention of the backhoe is one of inspiration, struggle, genius, success, theft and failure. Credit for the backhoe is often given to other larger outfits who no-doubt fueled the rise of its widespread use. Few people alive still remember the greatest triumphs and failures of the true inventors and innovators of first backhoe and the first all-hydraulic digger. Authors Lee Horton and Dave Willens, two engineers from Central Massachusetts, wanted to capture this fascinating history before it was lost to time.
